The future

By Naji M.A.

This book offers experiences to study. To investigate venom, one should not experience a snake or scorpion bite because it is fatal, so one should study the experiences of others!

Entertaining books (profit) pave the way for human life. That is, people fill the remaining moments(after satiety)with entertainment, but books that do not expect wealth and fame (non-profit) equip people with wings. That is, people wake up from the sleep of neglect and fly towards their goals!

Humans, these perceptive and creative beings, must have a purposeful life. That is, everyone is obliged to set at least one ideal goal and live to achieve it. Not like us (today's humans) who live in the age of galaxies with animals, subject to the laws of nature and have no goal other than saturation for survival!

The human brain is the most vast and hidden entity in the universe. Look at the galaxies, which are the most vast entities in our universe, and place a galaxy cluster at a point in your brain. There are countless points in the brain, for example, the language point, if opened, dozens of different languages will come out, each with dozens of letters, thousands of words, and trillions of sentences. Just like a point called a galaxy, when opened, billions of star systems will come out of it. The above text describes only two of the countless points in the brain, each containing trillions of points. So the journey into the brain is an endless one.

Humans entered the land about two hundred thousand years ago, but the productivity of the human brain(the supernatural and creative part)may reach thirty thousand years. In the beginning, humans were alienated from their own independent brains(unable to use it) and, like other living beings, they made a living by utilizing their natural and limited intelligence, and from time to time faced mass extinction due to various reasons such as drought, attacks by predators, malnutrition, etc (*All living beings have limited intelligence. Early humans also used limited intelligence to hide from predators. They crouched down and walked on all fours like monkeys, and due to improper nutrition, they were even uglier than monkeys. For this reason, some have said that modern humans were once monkeys and evolved. Humans are always human, but the use of the brain goes through its stages*) This brain deprivation and extinction continued until a clever mother saved her child and several other children from drought and pursuit by predatory animals. When the mother was sitting by a safe spring and the children were happy and entertained by the water, the drought and hardships of the past came to her mind and suddenly a spark

entered her brain. She immediately asked herself, can the spring water be stored for a while (a famine)? Why not, she answered. She stood up and violated the natural rule of the earth (which is for living beings to sit on the ground) and by building a chair and sitting on it, she conquered the planet earth with living beings and all its resources. This clever mother rose from the ground with her brain, not her legs. If she had stood without using her brain, she would have become an easy prey for predators. Fortunately, she rose using her brain and brought the anxious man, who walked on all fours out of fear of wild animals, to his upright position and to this ambition. This means that man became acquainted with his exceptional brain.

Everything (every phenomenon) is limited, even the outer space of galaxies. The only thing that has no limits is the infinite space of the human brain. The development and expansion of the human brain begins in childhood and is accompanied by infinity after puberty, but man reduces the space of his brain by creating an absolute(God)and using it as a key to solve problems and discover secrets. For example, when he sees a meteorite fall, he immediately says to himself: God is absolute and knows everything. The above unfortunate act limits the human brain to such an extent that the path of its investigation is blocked.

The brains of some animals, such as monkeys, are similar in shape to the human brain, but it is this outstanding human brain that creates everything. Visualize the grandeur of the galaxy, then discover its creator. Do not be misled because the creator of the galaxy is man. About two centuries ago, there was no galaxy. Over time, the human brain discovered it and named it. This means that the galaxy (the word) was created. Look at cell phones, this portable device is so vast that you can see galaxies in it, and this magnificent phenomenon was created by the human brain, not his hand because

monkeys have bigger and stronger hands.
To get better and more out of our brain, we need to go to its treasury from time to time and delete unnecessary and harmful files.
When a person inherits faith and beliefs, his brain is like a glass filled to overflowing with inherited beliefs, and until he frees himself from inherited beliefs, nothing new is added to his brain's treasury. It can be said that nothing but inheritance comes to his mind, because he is full of certainty. Therefore, to receive modern ideas and thoughts, the brain bowl must first be purified of inherited beliefs. To cleanse the brain bowl of inherited beliefs, a spark must be created in the brain, otherwise it will never be purified. When a person's thoughts are surrounded by inherited beliefs, his brain is locked in a cage, of course a very large cage in which billions of people say goodbye to life because the vastness of the cage prevents it from breaking.
Today, in most countries of the world, the majority of people are born with their own religion or belief, so that flags depict their beliefs. The birth of a human being with beliefs (heredity) is just like a bird that is born in a cage and the moment the fence of the cage collapses, it cannot fly because it does not know that its wings are for flying.
A hereditary heir can only free himself from inherited beliefs. Since no one can guide or force another to abandon beliefs, the individual must do the work of renunciation alone.
If you torture a person severely to make him give up his inherited beliefs, he will never give them up. He may confess under torture that he has given up his beliefs, but in reality he will never give up because he relies on his inherited beliefs and sincerely believes and is fanatic about them. Most parents send their children to school and in the elementary school textbooks, they teach the inherited beliefs of the parents and lock the children's brains in a cage of

outdated beliefs and fasten them with a lock without a key. Considering that a university professor carries with him the beliefs of his parents, education does not help a person to get out of the cage of inherited beliefs. Therefore, to break the cage of the brain, a spark must be created in the brain.

Humans, with inherited beliefs, move towards the destruction of their brains. They form large families regardless of the facilities for their children, because they believe that God provides the facilities for their children, and this causes their intellectual stagnation from generation to generation, because their brains are filled with outdated beliefs. Every human being who is born should have the best possible facilities to move his brain towards the discovery of hidden sciences. Unlike today, instead of providing facilities to our children, we fill their brains with our inherited beliefs and lock modern and capable brains in cages. Note that it is the emerging and expansive brains that make it possible to achieve goals, not our fossilized brains that are drowned in illusions.

Like most Iranians, I am a hereditary Shia Muslim and have carried outdated beliefs with me for over thirty years. I have always believed that only Islam can make humanity happy in this world and the hereafter. After clearing the brain bowl, I have placed in my brain such vast things as galaxies and the vast space between them, yet not a single corner of the brain is filled. The human brain is so vast and powerful that it is difficult to describe, but when it is filled with inherited beliefs, it is on the level of the brains of other living beings. Just like primitive man, whose thoughts were surrounded by the idea of the terrestrial universe.

I have traveled to several countries and have met and interacted closely with people from all walks of life, but I have never met anyone who has acquired their religion or beliefs through study. Since people change at every moment of their lives, I often get

curious and ask people what kind of ideology they have. Whenever I tell Iranian citizens: You are a hereditary Muslim, they have no problem with hereditary beliefs, but when I told an educated Iranian(so-called intellectual)that your belief in Islam is hereditary, he got very angry and said in a mocking tone: I became a Muslim through study. I asked, what is your field of study? In response, he said: You are insulting me. Then he turned his back on me with an angry face and left.

The human brain is the most superior phenomenon in the world, so before we can accept and believe in something absolute, we must inquire and reason as much as possible and prove with our firm beliefs that our brain is supernatural. Not like an extinct brain creature, inheriting the beliefs of our ancestors. We need to remove our ancestral beliefs from the brain because inherited beliefs prevent the brain from thinking and also prevent it from expanding. Given that our ancestors did not have sufficient means to understand the world around us, we should not consider their beliefs as absolute and be sure of it.

As mentioned earlier, no one can force another to abandon their traditional beliefs. So we should try to delete unnecessary files from the brain on our own!

Man is an unknown being, so much so that modern man has no knowledge of his own existence on earth and needs creative ideas to understand this, because human never knew and still does not know where came from and where is going.

Humans live on planet Earth, but unlike other creatures, they do not obey the laws of the Earth. Since all creatures on Earth, including living creatures, present themselves to the Earth within the fence of the Earth and under the laws of nature, humans, this mysterious creature, break the wall of the Earth and transform the law of nature (a phenomenon that occurs regularly, apparently inevitable, as observed in our society). A soft explanation of the law of nature: Monkeys are born on Earth and live on Earth regularly. This monkey is in no way able to distance itself from the natural order of the universe or to leave it, that is, to live voluntarily outside the planet Earth. Similarly, other creatures on Earth are all within the Earth's fence and it is not and will not be possible for them to leave the Earth's fence, but a creature that calls itself a human is born on Earth and after death must be buried on Earth like any other living creature. However, humans may be buried on the Moon and other planets or in a galaxy other than the Milky Way. Therefore, man is destroying and breaking the order of nature, because he has left Earth and is currently exploring other planets in the solar system, and will certainly go beyond the solar system in the future and, after conquering other systems in this galaxy, will explore access to other galaxies.

Man is the only being capable of disrupting the very orderly laws of nature in this world. Look at the entire (current) universe and see that there is no being capable of affecting or disrupting the order that governs the world and all except humans are completely

obedient to their environment. Just as our star (the Sun) in the Milky Way galaxy is obedient to its habitat.

Man, this talented and clever creature, changes his living environment and surroundings using his powers of perception and lives in a habitat that he has created himself to achieve his goals. For this reason, man is distinguished from other living beings, he goes out of his habitat, which is the earth, and looks to other places in the universe.

All beings in the universe are naturally obedient to their habitat and are unable to leave their environment in any way. For example, the Sun is enclosed in the Milky Way galaxy and offers its system to this galaxy. If the Milky Way galaxy falls, the Sun and its entire family (system) will collapse. Also, the planets of the Sun, each of which forms small systems, will disintegrate with the death of the Sun. But man is this mysterious and indescribable being who calls every being by name, breaks through the wall that surrounds its habitat and leaves it, and with this amazing movement changes the laws of nature. This means that with the fall of planet Earth, man will not become extinct because human has broken the fence of the Earth. Therefore, humans continue to live in other parts of the universe. Of course, real humans, those who use the transcendental brain, not those who wait for death(extinction) to enter an imaginary paradise.

Knowing man requires a lot of exploration and research. Hence, if we study and search, we may find a word or phrase to identify ourselves, but I can say with certainty that we do not find even a single word about it at present. Till date, there is no information about how man came into being. As a result, we will never reach the true identity of man unless we leave planet Earth and settle in another place in the universe.

Today, man is unaware of human existence(appearance) on Earth,

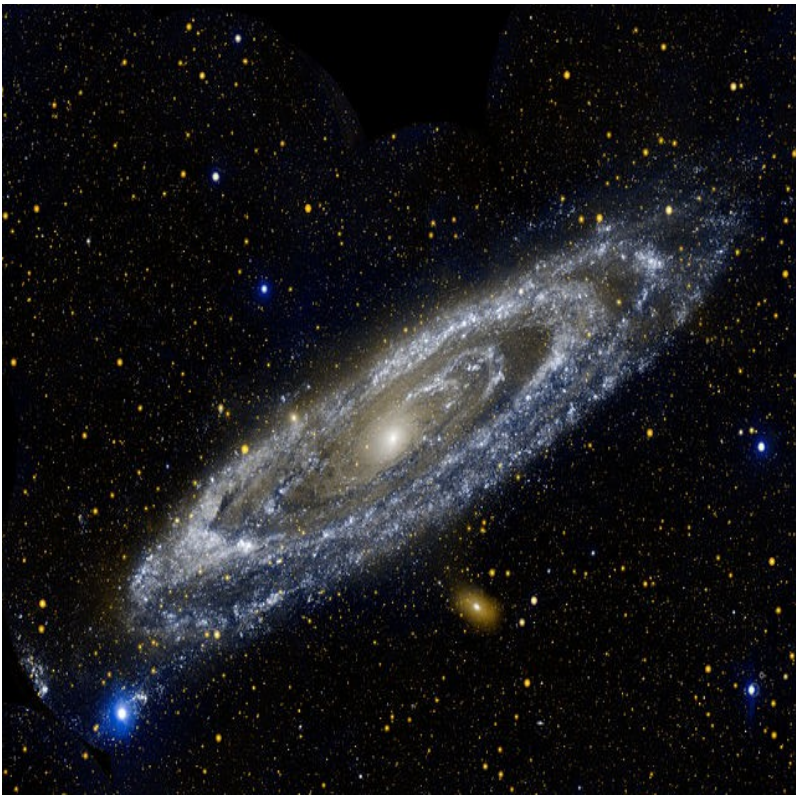
meaning human does not know where came from or where is going. Despite this fact, human considers himself omniscient and imagines and depicts the future for himself in the best possible way. The first humans, who were unable to use the power of inference, were chased and hunted by wild animals until they realized their own perception and abilities and took control of all living things and the possibilities of this planet. After dominating and subjugating animals, man conquered the entire earth and its resources and from that time to this moment, has been looking for a secure and stable future for himself. After the sun and the moon, fire and idolatry, people turned to the worship of this god (the God of the books) and even now the majority praise this god and consider him the savior and creator of their future.

Man discovered fire, and by lighting it in the darkness of the night they were protected from attacks by wild animals, and for thousands of years they worshipped fire as a god. After that they entered a phase where they had more free time, and that is when they changed their thoughts and beliefs and began to make idols. People carved and turned countless idols and bowed down to the works of their hands.

During the idolatry phase, man was so immersed in illusions and fantasies that they sacrificed their beloved child to handmade idols, because they believed that by sacrificing their child, the handmade idol would give them a better life. Humans created various idols, and tribes waged long and devastating wars to impose their idols on each other. It is narrated that one day a large number of people were present at the pagoda to praise the idols, the weather was hot and flies covered the faces of the idols. Someone from the crowd raised the question: How can a god who is unable to keep flies away from his face be our creator and savior? This incident enabled man to draw the line of nullity on the godhood of the idols.

When I look at pictures of galaxies, I think to myself, a galaxy with such a vast space only occupies a corner of the brain (thought). The diameter of the Milky Way galaxy is more than one hundred thousand light years, and the diameter of the galaxy IC 1101 is about six million light years, and one light year is equal to 9.4 trillion kilometers.

If we were to travel one light year at the current speed, we would have to fly non-stop for more than twenty thousand years.Therefore, the human brain, which depicts the entire universe and beyond (multiple worlds), is the most amazing creature among creatures.

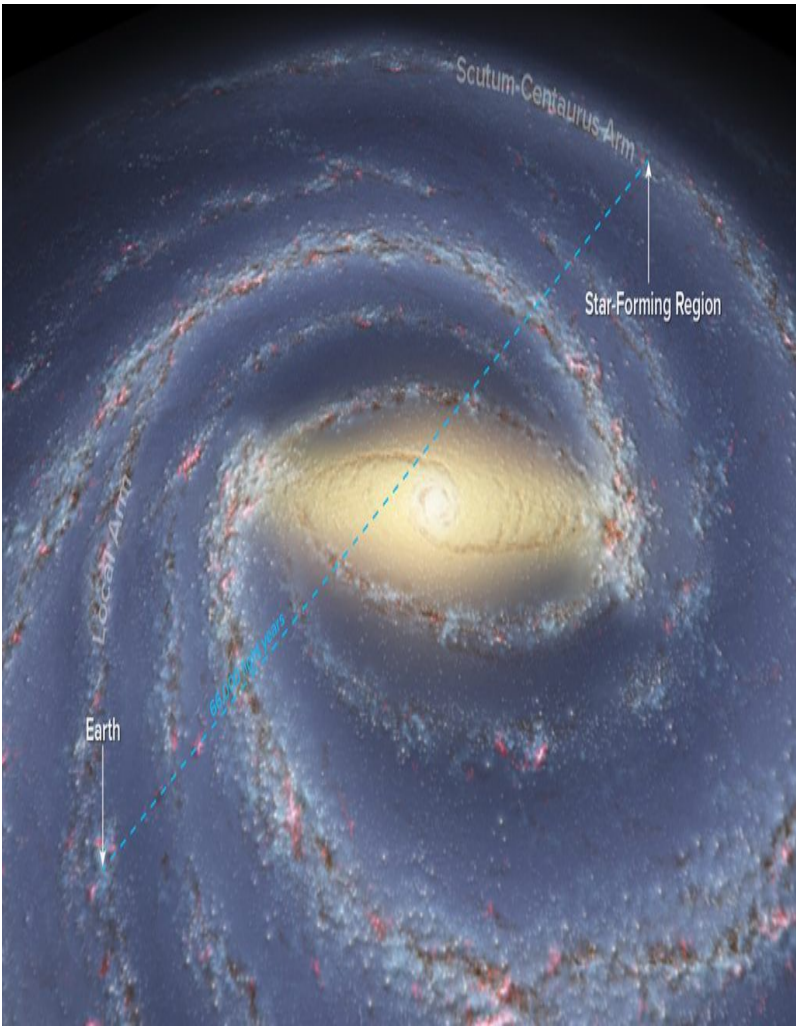


(Image of the giant galaxy IC 1101)

This galaxy contains trillions of stars like our Sun, spread out

over tens of light years, yet humans are showing off the entire galaxy. Where does this core (human) that depicts galaxies and speaks of the existence of parallel worlds come from? Parallel or multiple universes are not on the horizon, because they are still at the level of hypothesis and one of the topics of the day. Modern humans have no observations beyond galaxies. There are billions of galaxies in our observable universe, but we still do not know their exact number and we do not have more than a few examples of diverse galaxies in one image. The number of galaxies is estimated at two trillion, while each galaxy has billions of stars and the humans who discover and count galaxies cannot even travel to the planets of their own star system.

The current visible universe is said to be over forty billion light years across. This means that we are observing a distance of over forty billion light years. However, no matter how much I look and think, I cannot find any trace of humans anywhere in the universe and I ask myself: How is it possible for a being with this brain (more amazing than the entire universe) to anchor in this humble home (Earth) and struggle only for its own satiety and survival? In the image of the Milky Way, the Sun remains like a point, and the Earth is like a small bullet in the solar system, and this Sun with its entire system is not visible in the image of the entire universe. The point is that if extraterrestrials or aliens are in a part of the universe, they cannot find the Earth and observe its creatures, because the Earth is a point in another point. Among cosmic objects, our habitat is so small and insignificant that if we continue with our current lifestyle and wait for a savior, we will definitely be swallowed by the Sun in an instant. As you probably know, the lifespan of the Earth is limited and one day it will collapse like all other cosmic beings.



(Milky Way Galaxy)

The image above shows our home, but the dot that looks like a pinhead is definitely the Sun, because the planets are not visible. This is a sample of the billions of galaxies in the universe, and the dot shown in the image is one of the billions of stars in the Milky Way galaxy. Planet Earth is so small that it cannot be compared to a star, meaning it is not visible from outside the system. However,

we send waves and words into the sky to communicate with other cosmic beings, in the hope that extraterrestrials will hear our voice and send us a similar invitation.

The Earth's lifespan is not eternal and one day it will be swallowed by the Sun or turn into an ice ball and wander the galaxy like a homeless orphan. So we must plan to build the future. Consider that creating the future is the most difficult thing that humans have to do, because it requires using a high percentage of the brain and having a lot of information and facilities. That is, we must be aware of the limits of life on Earth and, if sufficient, prepare the ground for migration to other systems with long-term planning.To begin with, we must focus all our efforts on transferring facilities from other planets, so that by transferring facilities to Earth, we can plan a complete migration from Earth and settlement in an extrasolar star system.

In the early days of human life on Earth, they lived barefoot and in distress. Now, the same man, inferior to the ape (at that time, the apes were safer), has created a space station in the sky of the Earth with an area of 1200 square meters and a weight of 450 tons. Considering the fact that humans went from barefoot to building a space station, it would not be difficult to plan to move equipment from other parts of the galaxy in order to leave Earth.

Man alone is a weak and very vulnerable creature, to the point that he gets sick with a cold and spends days in bed with medicine to recover. For this reason, he strengthens himself and his life with the structure of society and cooperation, to the point that, through unity and cooperation, he makes airplanes fly and places a large space station in orbit around the Earth. Man is the only creature on this planet that is not satisfied with life on earth and tries to create a better environment and life for himself. Humans have countless plans and dreams for their ideal future, so that the vast

majority of people today hope for the promised paradise(religious books), that is, they believe in it and end their lives on earth by relying on an imaginary paradise. But some people, whom I call realists, are cautious and clever and try hard to create a perfect environment (ideal or real paradise) with long-term plans.

Humans can be divided into two categories. First, people who believe in the heavenly truth of religious books and choose the illusory promised paradise as a secure base for their future, who unfortunately constitute the vast majority. The second categorie, people who have the hope and enthusiasm to plan a secure future that they can work together to create, but they constitute a small percentage of the world's population. The people of the second part know very well that without the cooperation of the people of the first part, they will not succeed in building the future. Therefore, they have hope, unlike the people of the first part who have complete faith and confidence in everything, including God, heaven, etc. So until the issue of reconciliation between people on earth is resolved, none of the problems will be solved. And human unity must be established in every possible way so that problems can be overcome and ambitions can be achieved.

The world today is filled with people with very different views and beliefs. Given this reality, how can we unite? We are all human and have the same brain, but we are very different in color, face, body, and DNA. People are equal in perception, but their cognition and decision-making are different. That is, people's brains are as different as their fingerprints, and this brain diversity causes people to choose different methods to achieve their goals. Modern humans have countless goals and need diverse and thoughtful brains to achieve them. If people's brains were not as heterogeneous as their fingerprints, it would be impossible for humans to achieve goals, because they had a homogeneous mind and everyone would

choose the same path to achieve the goal. As you probably know, humans are fallible. Therefore, when all people choose the same path, if the choice is wrong, there is no going back. For this reason, diverse brains choose multiple paths and ultimately one of the paths ends up in the ideal environment of humans. Brains are different, but it is not the case that one person has superior and unique thinking power and another does not. Just like fingerprints, they are all different, but the function of the fingers is similar. Therefore, everyone can have exceptional thoughts, it is simply the abundance of possibilities that creates the opportunity for multiple and superior thoughts for individuals. Some people who do not believe in human unity, by seizing abundant possibilities, achieve multiple thoughts, then spread their thoughts as a supernatural thought in society and impose them on others at the appropriate time. In ancient times, due to lack of facilities, it was not possible to understand the world around us, and the lack of facilities caused people at that time to define the Earth as the entire universe. People who knew absolutely nothing about the structure of the world and believed that the Earth was fixed and the Sun revolved, created the God of the books. We, the people of today, with the same brain (without any changes) but with more facilities, depict galaxies. However, we worship a God that was created in ancient times by people who did not even have armed eyes. Simply because they propagated their thoughts as supernatural and then created a God and imposed themselves on people as the messenger of that God. Those who do not believe in human unity move towards dominating their fellow human beings so that they can dominate and rule others. Therefore, for decision-making (purely social actions), all perspectives must be considered so that no one can impose their opinion on others.

In the early days of human life on earth, people hunted animals

together to obtain food. But after the increase in population and moved to other parts of the earth, people distanced themselves from each other and lived in different groups, each in their own way, until the groups adopted distinct decisions and beliefs. After that, each group considered its own opinions and decisions to be more valuable than other groups and tried to spread its beliefs, which caused division and conflict between groups and brought humans into a state of conflict with their fellow humans. And this hostility and war between humans continues to this day.

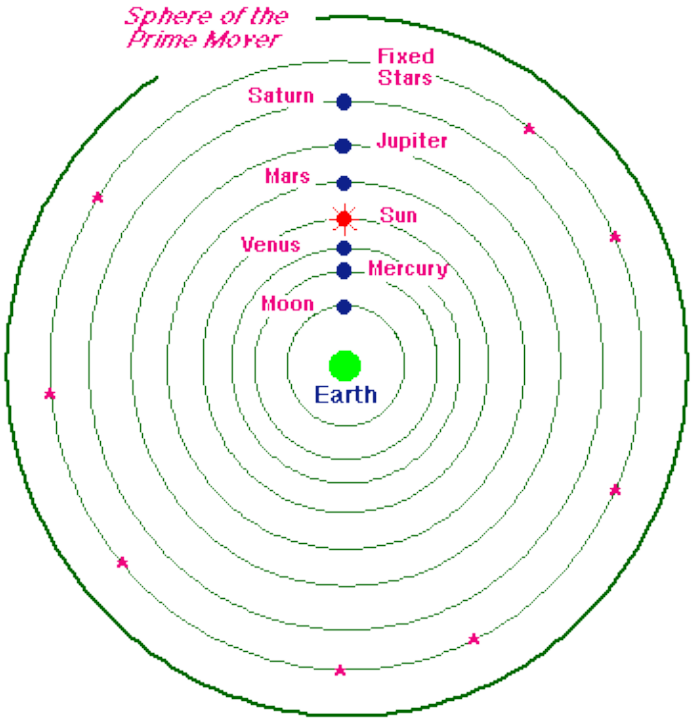
Since the beginning of life on earth, the future of man has always been terrifying. Therefore, people hope and resort to any herald (prophet or the like) to get rid of the fear of the future. Because no one knows anything about the future and there is no information about the past (how and where we came from),people are always eager to hear a reassuring statement about a secure future.

Everything that exists is discovered or created by humans and after naming it, it is related to life. Of course, humans have two types of making and creating. For example, in the early days of life, they made and named things like spears and... (hunting tools) that had external existence, but after dominating other living beings and conquering the earth, they created things that were illusory and had no external existence. As a result, these mental models of humans such as angels, devils, genies, fairies, etc. were invented and named. After that, humans began to build a bright future for themselves and created such a future that even today, after millennia of its creation, it is chosen and accepted by the majority.

In today's modern world, despite all the discoveries and cosmic achievements, not the slightest step has been taken to build the future, and this shows the inability of man to examine the future. The paradise(the present future of man),which was created in ancient times by the petrified mind of man, is today not only accepted by

the majority, but people believe in it wholeheartedly. Because the creator of that imaginary paradise has promised the ideal life of a brainless and lazy man, such as eating delicious food, wine, having sex with an ever-young (virgin) spouse, and being free from work and toil. The said paradise was created at a time when all our thoughts and ideas were at the bottom of our heads and did not enter our brains. Since the human brain is unique and always active and dynamic, if it stops exploring for a while (even if this stopping of thought happens in paradise), in any case, stopping of thought will cause the death of the human being. Because unlike other living beings, humans are always looking to create an ideal environment for their lives using the power of perception (brain). Humans have never stopped thinking and their discoveries will not remain motionless in the future. Of course, if the human race does not become extinct on Earth due to negligence(waiting for a savior).

In the age of illusionism (the creation of an invisible God), man did not have armed eyes and observed the universe by looking up. In that era, the only way or means of observing the universe was on the roofs of houses, which directed man's gaze to the entire universe. Therefore, everything that appeared to man's eyes, as understood and imagined, created absolute knowledge in his mind and became his beliefs. At that time, the criteria were not based on science, but rather pseudoscience. In those days, there was no galaxy or star system of which the planet Earth was part of a system called the Sun, only an Earth at the center of the universe with the Sun and other planets revolving around it. The image below shows a universe in which the Sun is one of the seven planets that revolve daily, as it appeared to the naked eye of primitive man and became inevitable in his thoughts and beliefs.



Aristotle's Universe

(Aristotelian cosmology 2500 years ago)

Science is changing all the time, because it is updated and perfected with new findings. For example, the speed of light in the 17th century was 200,000 kilometers per second according to observations at that time, but two centuries later, modern calculations showed that the speed of light is about 300,000 kilometers per second. Therefore, science is repeatable, but pseudoscience is neither repeatable nor changeable. For this reason, the phenomenon of the future of man (heaven).which is several thousand years old, can be said to be accepted by the majority of people these days without any change.

To escape the fear of an uncertain future, primitive man created

idols and sacrificed his children to them, but over time he realized that idols could not be saviors, and upon understanding the nature of idols, he became disillusioned with their divinity and gift. After that, he set out to build a better future and created an omnipotent God and placed him in the fabric of his life.

It might be said that the existence of this God(the God of Books) is indescribable, because he resides in the hearts of people and rules over the majority. Since most people today live in the hope of the promised paradise of books, if someone speaks against God, he is condemned to a horrible and painful death as an atheist. Today, if the question arises: Where in the world does the God of Books live? This is the reaction of God-fearing believers: If they are able to kill, they kill or evade answering and leave the questioner with contempt and insults. So, addressing the aforementioned topic is not an easy task. Of course, those who believe in this God do not read modern scientific books. I had a friend who often read the Quran. One day I wanted to explain some verses of the Quran to him implicitly and said: In the past, it was believed that the sun revolves, but today it has been proven that the earth revolves. He interrupted me and said: I read the Quran and perform religious duties such as prayer, fasting, etc. and in the end I am successful. It makes no difference to me whether the sun revolves or the earth. I only follow the instructions of the Quran.

In order to examine and evaluate the celestial (cosmic) sciences of religious books, we will first briefly recall the structure of the current world with the findings of modern man. To refer to the existing science of a book about the structure of the world, we must know the alphabet of the structure of the world. The alphabet of the structure of the world is the galaxy. Therefore, if the galaxy is removed from the structure of the universe, there is no universe that has a structure. Have you ever wondered what the origin of

life is? You could say that atomic particles (especially the spin of electrons) are the origin of life, but that's not the case because when atoms are born, they need space to live, grow, and become molecules, etc. As you probably know, only galaxies can have such space. This means that galaxies contain everything like atomic life, cells, elements, stars, etc. In other words, nothing exists without galaxies. Absolutely nothing, not even an atom. For something to come into being, for example, the birth of an atom, there must be a place of residence, otherwise birth is accompanied by death and nothingness. That is, without the formation of a galaxy, there is no existence, because the habitat of everything is the galaxy. Therefore, before the formation of the solar system in which the planet Earth is located, there must be a galaxy to maintain it. Since galaxies are the origin of the universe, when referring to the knowledge of a person or a book about the structure of the universe, we must keep galaxies in mind.

"The structure of the current universe in two sentences"

Atoms (containing particles) produce molecules and cells of life. Galaxies maintain the continuity of life and residence!

Birth, life, and residence are three existential principles that only the galaxy can bestow upon beings. Therefore, it is the beginning and the end, the galaxy. Modern science begins and continues with the formation of galaxies, but there is speculation about the prehistory of galaxies. About fourteen billion years ago, when galaxies formed, the cycle of this universe began to rotate and continues to this day in the same primitive style. The current universe should be called the galactic universe, because without galaxies there would be no place for existence and rotation(transformation), and everything that happens in the entire universe, such as the birth of an atom or a supernova, takes place inside galaxies.

Someone who explains the structure of the universe must be aware

of the existence of galaxies, otherwise they will leave out the entire structural system and describe the structure of the universe in a misleading way. Just as the geocentric system was described in ancient times. Therefore, if someone explains the structure of the universe without mentioning galaxies, they know absolutely nothing about the universe. Galaxies are the beginning of existence and permanence, but we do not know how they were formed. Modern science says: A big explosion that came out of nowhere formed galaxies. Probably, the previous universe system(hypothesis) had a single galaxy system with a very large black hole in its center and all the beings in the universe revolved around a black hole. With the abundance of objects and the adiabatic expansion of the universe (single galaxy),its central space (black hole) collapsed to the maximum and the Big Bang occurred. After the collapse of the single galaxy universe, this universe was born with numerous galaxies.

Less than a thousand years ago, our world was limited to the Earth, and no one understood the rotation of the Earth, let alone the galaxy. We didn't know much about the world around us until the Earth's wall was first broken by Yuri Gagarin in the 1960s. A flight that proved to humans the insignificance of the Earth in today's world. About two centuries ago, when there were no galaxies, the sun formed our entire universe, but when the galaxy (the word) was created, everything changed. So that one star became billions of stars and after researching and observing several galaxies, man realized that the universe was much wider than he thought.

Our current universe is made up of galaxies, and parallel universes are on the fringes. Parallel universes mean multiple worlds, each containing trillions of galaxies. If the hypothesis of parallel universes is true, it seems that parallel universes like galaxies exist in a world beyond our imagination, and that unimaginable universe may also

have another world beyond itself. My brain is about to explode because the human world started from the earth and joined the sun, and currently the galaxies are our world, and this world (galaxies) is not a complete world because parallel universes are on the way. We name these universes and simply pass by them. While we cannot even imagine their vastness or splendor. The Milky Way galaxy has more than two hundred billion stars, each star has several planets and each planet has several moons, and our visible universe has trillions of galaxies. It is easy to say a trillion galaxies, but it is impossible to imagine what space they occupy. Consequently, the realm of the universe(the outer space of galaxies) is absolutely infinite (Of course, for today's man).

According to the above, to fully understand the structure of the universe, one must fly beyond galaxies. Therefore, a complete description of the structure of the universe is not possible for modern man, because he is unable to travel to planets, let alone leave his own galaxy. Due to the lack of comprehensive knowledge of the structure of the world, to describe it, before making any comments, we must thoroughly examine our own learnings and the world around us. That is, we must be aware of new knowledge and discoveries, compare our knowledge with it, and then present our hypothesis or findings. As you know, in the Middle Ages, some people imposed their fallacy and mentality on society as the absolute science of the structure of the world, and for millennia they misled all of humanity.

Our spatial or cosmic knowledge has never been and is not perfect. Because it changes with findings, but in relation to the Creator (when a person claims to be a prophet) everything must be word for word and absolute. Simply put, the place where man lives(earth) in the universe is not even the size of a needle's head, and the God who is in contact with man(the prophet) created the universe. So

every message that the prophet brings must be one hundred percent clear and absolute. Note that if the religious books are the word of God, the creatures do not have the power to criticize the Creator's commands. When a prophet appears, it means that God Almighty exists and creates an ideal future for His servants. Therefore, a believer does not need cosmic research and discoveries. Because by trusting in God, all his wishes will be fulfilled.

The above material is for the presence of mind, because in the following, we will examine the cosmic sciences of religious books and compare them with today's knowledge.

I will try to include the cosmology of the religious writers in this book, and since I do not intend to seduce or divide, I will only present sections for clarification and analysis. Fortunately, the religious books are available as they were sent down from heaven by the angel of God (without change), and we can recount their cosmology according to common standards. First, we will review the Torah, which tells the story of creation from the day of eternity. Of course, eternity goes back to before the Big Bang, which, according to the explicit text of the Torah, that moment (emergence) occurred on Earth.

(Torah, Genesis verses 1 to 20)

In the beginning, when God created the heavens and the earth, the earth was formless and empty, and the Spirit of God was hovering over the dark clouds. And God said, “Let there be light!” And there was light. And God loved the light, and separated the light from the darkness. And God called the light day, and the darkness night. And the night was over, and the morning came. This was the first day.

Then God said, "Let the clouds of vapor separate to form the sky above and the oceans below." God separated the clouds of vapor from the waters below and created the sky. This was the second

day.
Then God said, "Let the waters under the sky be gathered together to one place, and let the dry land appear." And it was so, and God was pleased. Then God said, "Let the earth produce all kinds of plants, seed-bearing plants, and fruit trees, each yielding its own kind." And it was so, and God was pleased. This was the third day.
Then God said, “Let there be lights in the expanse of the sky to give light on the earth, to separate the day from the night, and to make the days and the seasons; and it was so. So God made two great lights to give light on the earth, the greater light (the sun) to rule the day, and the lesser light (the moon) to rule the night. God also made the stars and set them in the expanse of the sky to give light on the earth, to rule the day and the night, and to separate the light from the darkness. And it was so, and God was pleased. This was the fourth day.
A brief reflection on the creation of the first day is enough to assess the ability of the author of the Torah to understand the structure of the universe, because on the first day, night and day were created. The author of the above verses describes creation without mentioning the galaxy. Describing creation without mentioning the galaxy may have been acceptable in the Stone Age, but in an age where modern science says that man lives in the safety of the galaxy, creation without the galaxy is not acceptable at all. Today, when seven-year-old children know the secret of the Earth's rotation, it is not consistent with any logic that the above verse says that light was separated from darkness and the first day was created, because there is no need to separate light and darkness to create day and night.
When day and night are created on Earth, it means that the galaxy was formed and stars, one of which is the Sun, formed their systems,

and this galactic process has been going on for billions of years. In the Torah's creation, despite the establishment of day and night at the beginning of creation, no stars were yet created to form systems in the galaxy, one of which, the Sun, could accommodate planet Earth.

The world of the author of the Torah is limited to the Earth (even though he does not understand the location of the Earth), because in his world structure the Earth was created before the Sun and everything else, even the source of life(galaxies). The text of the Torah: In the beginning, when God created the heavens and the earth, the earth was empty and without form. God said, "Let there be light!" And there was light. God called the light day, and the darkness night. And the first day was created! This means that the world (of course, the world without the galaxy of the God of the Torah) was created and began on the Earth. To create day and night, it is the galaxy that must be formed, not the separation of light from darkness. Without a galaxy, there would never be a star or planet to create day and night. The Torah's statement that God separated light from darkness and created day and night is irrational and does not conform to any logic, because the existence of day and night is the axial rotation of the Earth. That is, the Earth rolls in its orbit, the side facing the sun is bright (day) and the back is dark (night).

Creation of the first day, Torah: God separated the light from the darkness, the light became day and the darkness became night. That is, day and night (one side of the needle)encompass the entire universe. Why does today's man, who has the entire galaxy in one image, accept an obsolete writing as divine revelation? It can be said that more than seven billion people of the current world population believe that the books of religions are the word of God. The text of the Torah, in which God separates light from darkness to create

day and night, cannot be comprehended by any human mind, let alone accepted as the word of God. Why do most people today accept religious books as the word of God? If the answer is that they do not have access to facilities and, like primitive people, do not know anything about the structure of the world, it is a complete lie, because most people today are educated and have considerable facilities. Some heads of state, such as the president, who are highly educated, often end their speeches by saying: God bless you, meaning the same God who separated the light from the darkness and created day and night. These so-called educated and enlightened leaders should know that a God who does not understand the rotation of the earth and separates light from darkness to create day and night, cannot bless man. If the author of the Torah understood the spherical nature of the earth (Aristotle recorded the spherical nature of the earth),he would not have told the story of the creation of day and night in such a way that God separated the light from the darkness and called the light day and the darkness night. Because at that time, the sun revolved around the earth and created day and night.

Day Two of Creation: Then God said, "Let the clouds of vapor separate so that the sky above and the oceans below will form." God separated the clouds of vapor from the waters below and created the sky! The sky is the realm of more than two trillion galaxies, each containing hundreds of billions of stars. However, the text of the Torah states that God separated the clouds from the waters below and created the sky. That is, with the separation of the clouds from the surface of the earth, a universe with two trillion galaxies is born, each containing trillions of masses and billions of star systems. Surely the Milky Way galaxy was also formed after the clouds separated from the surface of the earth, because before the clouds separated from the earth, there were no universes or masses in the

sky. Given that most human societies have accepted religious books as divine revelation, the word of God cannot be wrong. Therefore, we must believe that everything, even the sun, came into being after the clouds separated from the surface of the earth.

In today's world, galaxies are the vastness of the sky(universe), but the distance or space between them (the blackness of the universe) is the most extensive phenomenon in our world. The distance between the Earth and the galaxy(GEN-z 11) is calculated to be about thirty billion light years, and this is just one of the billions of distances in the sky. A sky with trillions of galaxies and incredible vastness, according to the explicit text of the Torah, masses of vapor separated from the waters of the earth and the sky was created. We can now use new technology to observe galaxies, but the outer space of galaxies is not discernible to us. These days, astronomical terms such as parsecs and megaparsecs are used to determine distances in space. One parsec is equal to 3.3 light years and one megaparsec is equal to one million parsecs, and distances between galaxies are determined in tens of megaparsecs. The universe is so vast that its dimensions are incomprehensible to modern humans, and it is still expanding. Whenever I look at the recorded distances of celestial bodies, my brain whistles, and when I hear the theory of parallel universes, I experience a mental pause, because the galaxies of this single universe are countless. Modern humans are not able to travel to the planets in their own star system, but they can observe more than forty billion light years away.

Day Three of Creation: God said, "Let the waters under the sky gather together in one place until dry land appears," and it was so. Then God said, "Let all kinds of plants, seed-bearing plants, and fruit- bearing trees sprout on the earth," and it was so, and God was pleased

The God of the Torah first created day and night. On the second

day, he raised the sky, and on the third day, he gathered the waters together and created life on earth, although he had not yet created a star. Light and day were created on the first day (Eternal), but the source of the light that created the day is completely unclear because the sun and stars were all created on the next day, the fourth day. Creation on the fourth day: God said, Let there be lights in the firmament of the heavens to give light upon the earth .... So God made two great lights(the sun and the moon) to give light upon the earth. God also made the stars and placed them in the firmament ...!

The text of the verses that the Torah presents about creation are the observations and fantasies of an earthly observer who lived in the Stone Age, because his cosmic knowledge is zero. In the creation of the author of the Torah, there is no galaxy, while the galaxy is the alphabet of the structure of the (creation) world. When man does not understand the galaxy, he is a stranger to star systems, and when he does not understand the star system, the result is that the author of the Torah introduces himself as the messenger of the Creator of the universe. The author of the Torah, who supposedly quoted the word of God, describes creation without mentioning the Milky Way galaxy in which the Earth is located, and creation without a galaxy is meaningless to modern man, because the sun must be born in the galaxy, otherwise it will disappear, let alone form a system and shelter for the Earth and its inhabitants. The birth of a star outside the galaxy is like throwing a baby out of the womb in the middle of the desert. Therefore, without the galaxy there would be no stars to attract the Earth for human life so that a person (the author of the Torah) would be born and claim that God spoke to him and then describe the structure of the universe as mentioned above.

Today, despite the fact that explaining the structure of the universe

without mentioning the galaxy is completely baseless, the vast majority of people are convinced that the above verses were revealed by the angel of God from heaven to the prophets (e.g. Moses). According to modern science, the solar system was formed 4.6 billion years ago, and about thirty million years later, the Earth settled into this position (orbit).The stability of this system depends on the persistence of the density of the Sun. The Sun is the main mass of this system, constituting more than 99% of the mass of the system.

The sun is the origin of the earth and life on it. As you probably know, the earth is a million times smaller than the sun. For example, if we have a picture of the sun with an area of one square meter, the earth is just a point in it. The reason I am describing the glory of the sun compared to the earth is because religious books call the earth the whole world, compare the sun to the moon, and whenever the sun is mentioned, they put the moon in front of it. From the perspective of an observer on Earth, the Sun and Moon appear as two luminous spheres in the sky. The Moon, which appears as a bright ball in the Earth's sky, is the small distance from it that causes its radiation. The distance between the Moon and the Earth is about 400,000 kilometers, and the Sun is 150 million kilometers from the Earth. If the Sun were 400,000 kilometers away from the Earth, it would not only not be visible, but would also swallow the Earth, because the mass of the Sun is so huge compared to the Earth that it is difficult to imagine.

In the following, we will examine the comparison of the Sun with the Moon in religious books. According to modern calculations, the sun is twenty million times larger than the moon. The number twenty million is easy to pronounce, but if you can, visualize or draw twenty million moons. The point is that the moon cannot play a role in describing the sun because it is part of the earth. If

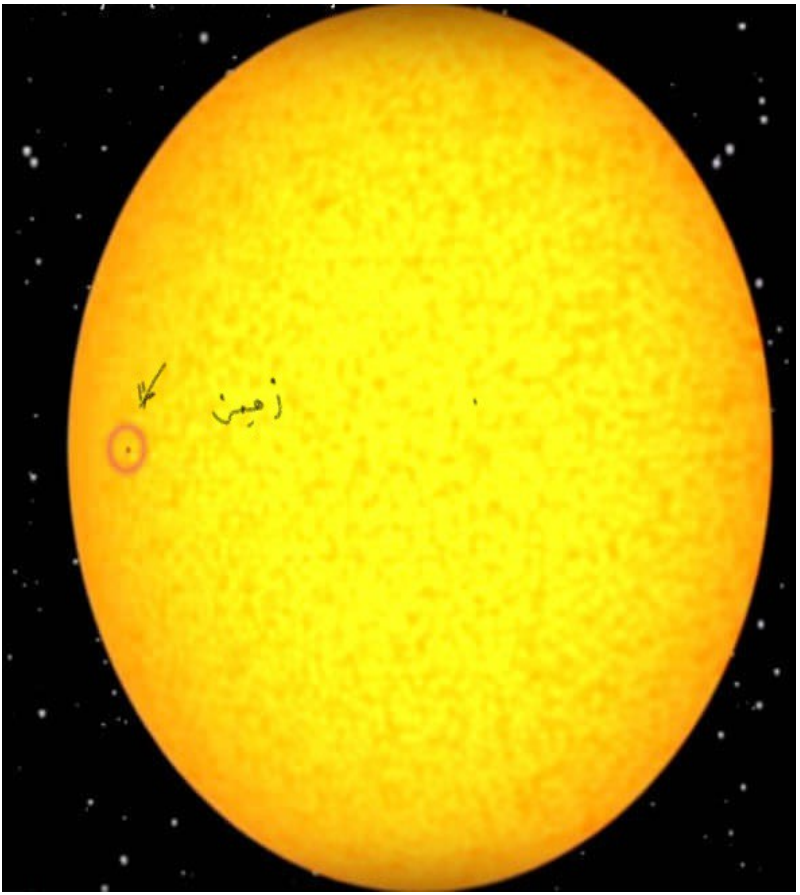
an extraterrestrial being were to define the sun, he certainly would not mention the moon. Because he would not observe the moon to place it opposite the sun, as primitive humans did. But from the perspective of an earthly observer, the moon and the sun are comparable. Just as the author of the Torah created the two great lights (the sun and the moon) on the fourth day and made them rulers of day and night. Today, an eight or nine year old child knows that there is only one star in our solar system and that the moon is a lump of soil or something similar that reflects the sun's light to the earth. But in the era when the Torah was written, the earth had two great lights. The larger light(the sun) is described as the ruler of the day and the smaller light(the moon) as the ruler of the night. This is also an example of comparing the sun with the moon and is undoubtedly the statement of an earthly observer who has inspired his hypothesis to others as a divine revelation (descended from heaven). It was previously mentioned that people with multiple positions and opportunities have more thoughts, and a number of them impose their thoughts and theories on others as supernatural.

When we observe the sky(universe) with the naked eye, we see galaxies in the form of stars, because some galaxies appear like stars. Therefore, an earthly observer of all the splendor and structure of the universe usually sees the sun and the moon, both of which revolve around the earth. If people were aware of acquired sciences, they would never accept the above verses as divine revelation. Unfortunately, today the majority of people consider all the texts of the books to be divine verses and among all the writings, they cultivate only the promised paradise in their minds. It can be said that people who believe in the books do not care at all about the truth or falsehood of the promised paradise (text), because their minds are surrounded by sustenance and livelihood. Since the

vast majority of people consider the nature of religious books to be divine, I ask myself: Why do millions of educated people accept the text of obsolete books as the word of God, even though none of the books understand the location of the Earth and do not contain even a single correct sentence about the structure of the universe?

Anyone who, before reading or listening to the text of a book, acknowledges that an angel sent that book down from heaven, whatever the text is, is true and absolute for him, simply because it is the word of God. For this reason, when a believer reads the text of the book in which it is written: God separated the light from the darkness and created the day and the night, instead of grinning and throwing the nonsense into the dustbin of history, he becomes delusional, sheds tears and humbly kisses the book so that he may receive the promised paradise of the book. If it is mentioned in the text of religious books that the bedroom of the sun is located underground and that the sun sleeps there at night, it is not only accepted, but it is absolute. Creating day and night by separating light from darkness is unacceptable to today's elementary school students, but some university professors not only accept it, but believe in it wholeheartedly.

To explain the material more precisely, I will show some pictures that are not interesting to the majority, for which I apologize. Even today, there are those who deny the rotation of the Earth and say: If the Earth rotates, when we jump into the air, we must land somewhere else. Hence, the pictures are attached. The picture below shows the insignificant mass of the Earth compared to the Sun. If we consider the picture as half of the Sun and compare it to the Earth, we must draw 499999 more points on it, because the Earth is one million times smaller than the Sun.



I have no knowledge of the existence or non-existence of God and gods, but after observation and research I can best describe and present the gods of the past and present (the God of the books). The idols were called gods, while the flies covered their faces. And because the idols could not free themselves from the clutches of the flies, they were pulled down from the position of gods. The Torah is a book revealed by God. The author (God) first created the earth, day, night, life on earth, and then the sun and stars. According to modern science, the earth settled into this system

(orbit) about fifty million years after the birth of the sun, and the moon was formed after that. Since the earth was formed long after the formation of the solar system, if the structure of the world of the author of the Torah is examined with new findings, it cannot be evaluated anywhere in the world, let alone be considered the word of God.

Today, most people accept the text of the Torah as the word of God, while according to the Torah, the sun and moon were created on the fourth day. To gauge the Torah's awareness of the position of the sun, we read the story of the sun standing in the middle of the earth's sky. The story of the prophet who, through prayer, established this legendary event.

(Torah, Joshua / 10 verses 12 to 15)

While the Israeli soldiers were pursuing the enemy and had rendered them helpless, the prophet Joshua prayed to God and said in the presence of the Israelites: "Sun, stand still over Gibeon, and moon, stand still over Aijalon." The sun and moon stood still until the Israelites had destroyed the enemy.

This event is also recorded in the Book of Jasher. So the sun stood still in the middle of the sky all day. There has never been a day like this, when God stopped the movement of the sun and the moon because of the prayer of a man. Truly, it was God who fought for the Israelites !

The above verses, which clearly show the ignorance of the author, are a pretext for condemning and burning the wise alive. Simply because the explicit text of the Torah says that God stops the rotation of the sun in such a way that it stands on one side of the earth above the head of man(the sky). Therefore, anyone who proposes the rotation of the earth will be condemned to a terrible death as an atheist, just as the wise old man Galileo was condemned in the Catholic Church. Today, if they make up a story and say: The

sun stopped moving in the middle of the sky all day, it will be very ridiculous.

We live in the age of science and technology, but religious books still dominate us. So much so that today more than seven billion people are sure that after death they will reach the promised paradise of books. Books of which Joshua (the one who ordered the sun to stop) is one of the prophets.

In the 15th century, the Polish astronomer Nicolaus Copernicus developed and scientifically presented the heliocentric theory. Copernicus' revolutionary theory is one of the most brilliant documents, but it contradicts the contents of the Bible (the Word of God). For this reason, religious leaders, including Martin Luther, the founder of Protestantism, also known as the Reformer, spoke very harshly about Copernicus and his theory. As has long been the case, people with religious beliefs marginalize or oppose science. The following text is about Copernicus.

"We have heard that an astronomer intends to show that the earth moves and revolves, not the sun. This fool (Copernicus) intends to upset the entire astronomical system, but according to the clear text of the Bible, it was the sun that the prophet Joshua commanded to stand still, not the earth."(Martin Luther)

After Nicolaus Copernicus, Galileo Galilei defended the heliocentric hypothesis, and the church, which considered the geocentric hypothesis to be the absolute word of God and revealed from heaven, brought Galileo to the Inquisition. If Galileo had not denied his statements about the rotation of the Earth and signed a confession, he would have been burned alive.

The church imposed the following penance on Galileo under threat of death. This penance may serve as a lesson for believers, those who await death so that this death and nonexistence may lead them to the promised paradise.

"In my seventieth year of life, I kneel before you, and while I have the Bible before my eyes and touch it with my hands, I repent and deny the baseless and untruthful claim of the rotation and movement of the Earth, and I abhor and reject it"!

More than two hundred years after Galileo's denial of the rotation of the earth (repentance) and death, the Church, without apology or acknowledgement that the text of the books was not and is not divine, announced that it had forgiven him. The decline and fall of man is when the wicked forgive the reformers. The belief of the popes was and is a pure lie, because their God does not understand the rotation of the earth. When God does not understand the rotation of the earth, his successor, the pope, pardons Galileo for denying the rotation of the earth. Today, when the pope (the heir of the one who condemned Galileo) visits a country, more than a million people come to kiss his feet.

I will do my best to bring the clear text of religious books in this notebook and point out with reason and evidence that they are not heavenly, because in the current world it is impossible to prove that they are not heavenly. Because at present, the only motivation for people's life and hope for the future is the promised paradise of books. We, the so-called modern humans, if we remove this imaginary paradise from our minds, have absolutely nothing for the future. In fact, the promised paradise of books surrounds our thoughts in such a way that without it we have no motivation to continue living, because we have never thought about building the future. Just like beings who are inevitably subject to the laws of nature and are alien to fate and building the future. When man is neither sure of his future nor has the ability to create it, he is forced to create a god so that God can determine his future. Just as the living and present God provides eternal paradise for believers. Note that our current god (books) was created in the Stone Age.

Today's man, who lives in the age of science and technology, must put aside illusions such as God, paradise and the like and unite to create a secure future, then roll up his sleeves and try with all his heart to build it. Otherwise, he will sink with the earth into the fire of the sun and disappear from the scene of time.

If the books of religions were heavenly and from God, at least Joshua (the prophet Joshua) would have prayed that God would stop the rotation of the earth so that the sun would remain fixed above the sky of Gibeon, not like the Torah text, where God stops the sun in the middle of the sky.

The above argument is in the simplest language and understandable to anyone who can read, but ignorance and prejudice understand neither the language nor the content.

To clarify and focus the thought, all the evidence, effective and relevant information must be presented. So I will mention each as much as possible. I wish I were a writer and could tell my story more concretely and with a universal dialect, but unfortunately (it is evident in the text) I am not a writer and I do not have the ability to write effectively. I was going to explain in the introduction, but I was worried that the audience would leave the study after reading the introduction. Most people today are more interested in the author's name than the content, the author is important, not the text of the book. Therefore, the book "The Future" written by Naji (Medi Asisi) may not be able to be studied due to its anonymity. In any case, I hope to be able to share it.

The New Testament books do not say much about the origin of creation, perhaps because the New Testament contains the Old Testament called the Bible, but there are verses in John about eternity and the beginning.

(Gospel of John / 1 verses 1 to 5)

"In the beginning was the Word, and the Word was with God, and

the Word was God" "He was in the beginning with God" "All things came to be through him, and without him nothing came to be. What came to be" "Through him was life, and this life was the light of the human race" "The light shines in the darkness, and the darkness has not overcome it".

To speak, man first made letters, then words with letters and phrases with words. Therefore, the word cannot be eternal, because it was created by man and man was born after the earth was placed in this orbit and life began in it. I must repeat again, at first galaxies, of which the Milky Way is one, are formed and the star (the Sun) is born in it, then it stabilizes its system by attracting the earth and other planets. As a result, with the beginning of life on earth, the eyes of living beings, one of which is man, are opened to the world. Given that life on Earth began billions of years after the formation of the Milky Way, how can we say that the Word is eternal? (According to the above verse, the Word existed before anything else). As you know, the first Word came from the mouth of man, and humans joined it billions of years after the stability and security of the solar system. According to modern science, man is about two hundred thousand years old. So, the history of the word must be less than the history of man. The earth is more than four billion years old. It was previously explained that man names everything by creation or discovery, that is, he creates all existential and mental things with words.

When man decided to create this future (paradise),he had moved a little away from the stage of idolatry, but he continued the same old way of worship and, amidst illusion and fantasy, created the God of the Books. After that, prophets were chosen one after another by the Creator to guide his people to God. Then, people who pretended to be prophets conveyed God's messages to people. In ancient times, prophets were eloquent individuals who revealed

to people the entire divine revelations that the angel of God had revealed. Prophets are also human beings, their only advantage is that God speaks to them and they receive unseen messages. In the Quran, Surah Al-Kahf, verse 110, it says: Say: I am only a human being like you, my only difference from you is that I am inspired. If there were really a God who guided His servants by sending a prophet, He would have chosen only one person to be a messenger, because He is the Creator and Almighty and can grant a prophet a long life. Not like the imaginary God of religions who sends more than a hundred thousand prophets and immerses His servants in hatred and strife. If the God of the Books were true, at least one sentence would have been revealed to a prophet as a revelation that was hidden from the view of observers on earth. I mean a correct sentence about the structure of the universe, not illusions like angels, jinn, and the like that are hidden from human sight, because all of them have absolutely no external existence. We do not expect the text of an obsolete book to explain the formation of galaxies, but rather a sentence about the rotation of the Earth. Anyone who believes in the prophets can read the religious books word by word and find a sentence about celestial bodies that are hidden from human sight, for example, the rotation of the Earth, the simplest thing that is beyond the sight of an earthly observer. If successful, he can pray and prostrate every day in the hope of the promised paradise, but if nothing but the observations of an earthly observer are found in the books, he must abandon the imaginary paradise and strive to create the ideal environment for man (the real paradise).

People today cannot interact and unite with each other because their God does not want it, as it is stated in the Quran (people are in perpetual enmity). It is as if God sits on the moon and looks at the earth and its creatures so that the way people live and behave

is noticeable to him. Just as the people of the earth watch exciting TV series every day and week. This is why God does not want people to be one nation and united, because united people do not attack each other, but rather create an ideal future with unity and companionship, and this lifestyle becomes boring for someone who sits on the moon and watches the earth. Therefore, the more hostility and conflict between people, the more exciting it is for the viewer. The fact that the moon always shows us one side of its face may be because someone is there and his gaze is always directed towards the inhabitants of the earth.

(Quran, Surah Hud, verse 118)

And if Allah had willed, He could have made all mankind one nation, while they are constantly in disagreement!

As the above verse says, God does not want us to be a united nation. So, you and I who are constantly in opposition and conflict are not to blame because this is the norm, the divine providence. Therefore, we are doomed to be belligerent until the human race disappears from this planet. Of course, if we can pass through the era of the God of Books like the era of idols, we will avoid hatred and conflict and then, with solidarity and assistance, we will overcome obstacles and bring ambitions.

Description of everyday topics and ancient myths such as the story of Moses (a character in the books) who was placed in a basket by his mother and left in the Nile River, then Pharaoh's wife pulled the basket out of the water and convinced Pharaoh to adopt Moses as his son. Such narratives and myth-making are quite tangible and understandable in ancient times and other eras, but the expression of scientific matters such as the geocentric world, according to which the Earth is fixed, and the seven planets, namely the Moon, Mercury, Venus, the Sun, Mars, Jupiter and Saturn, each of which revolves around the Earth, is specific to a period

of time. For example, in ancient times, the very regular rotation of the Sun and Moon, which was observed and described by an earthly observer, was understandable and acceptable to everyone, but this rotation of the Sun and Moon is not understandable in the modern era. Because the science of the Earth's rotation is obvious and proven to everyone. The above is for the presence of mind in the following materials.

When someone describes the rotation of the sun and the moon as simultaneous, it becomes clear that the theologian is an earthly observer. I must repeat again: if a being outside this system (the solar system) explains the galactic motion of the sun to people on Earth, it certainly does not include the rotation of the moon. Because the moon is part of the Earth and no one could combine the rotation of the moon with the motion of the sun, except for an earthly observer living in ancient times. Therefore, any person or being who describes the rotation of the sun and the moon together, even if he is a prophet or claims to be a god, is an earthly observer who is expressing his own observations (of course with the naked eye).

Some religious theologians, in order to justify the error of the terrestrial observer, say: The author's purpose in stating the rotation of the sun and moon is the galactic motion of the sun. If someone wants to explain the galactic orbit of the sun, he never refers to the orbit of the moon, because the orbit of the moon is terrestrial. An adult today would never relate the rotation of the moon to the galactic motion of the sun, because the moon and the sun have nothing in common and the difference between them is like a drop and an ocean. Today, if someone relates the rotation of the moon to the galactic motion of the sun and justifies it by saying that the rotation of the sun and the moon means the galactic motion of the sun, he would be called a fool.

The Quran describes the cycle of the sun, moon, day and night in several sections (surahs),examples of which we will examine in the following lines. Before referring to the surahs of the Quran, one should be careful that the bowl (skull) of the brain is not full of inherited beliefs. Because until the bowl of the brain is completely cleansed of inherited beliefs, we cannot face the realities or accept the truth. An old proverb says: Truth is bitter! As you know, truth is knowledge and wisdom, it only becomes bitter when we run away from it. For example, after thirty years of living with the promises of books, such as a permanent and carefree life in paradise and ... when I realized that all of them were nothing more than lies and nonsense, it was so bitter and difficult for me to accept this truth that the first thought of suicide came to my mind.

(Surah Al-Anbiya, verse 33)

And He(Allah) is the One who created the night and the day, the sun and the moon, each revolving in a prescribed orbit!

The statement that the night, day, sun and moon rotate is a gross error because neither night nor day, nor sun nor moon rotates. The author of the verse(an observer on earth) does not understand the rotation of the earth and mistakenly describes it as the rotation of night and day and sun and moon. Any book or writing that describes the rotation of the sun and moon together is obviously the author was an observer on earth and lived in ancient times.

In today's world, anyone who reads or hears the above verse must imagine the rotation of the earth in their mind, otherwise they cannot be a modern human being, because the verse clearly states the daily rotation of the sun, etc. Modern man knows very well that none of the contents of the verse, such as night, day, sun, and moon, rotate, but the earth rotates.

This verse (33) is very tangible and understandable to everyone because the author expresses his observations by looking at the sky. According to the text of the verse, every reader is aware that

the author is an earthly observer, but not those whose brains are full of inherited beliefs, because before reading they believe that all verses were divine revelations.
I used to think that if I assumed that the text of the Quran was not the word of God, I would turn into stone, so I did not even dare to doubt the Quran, let alone deny it. When it is said that the verse mentioned is not the word of God and is the perspective of an earthly observer because it mentions the rotation of the sun and the moon, the scholars of the Book justify it by saying that the sun also rotates. Matching the two hundred and twenty million year galactic orbit of the sun with the daily rotation of the moon (the error of the earthly observer) is in no way justifiable, but the heirs of its obsolete beliefs justify and interpret it in such a way that the author means by the rotation of the sun and the moon the galactic rotation of the sun. Before the explanation, the commentator (explainer) clarifies that the sun also rotates in order to be able to justify, while everyone knows that the sun is the fixed point of this system and that the planets each revolve around it in their own orbit. The moon is located in the Earth's solar orbit and revolves around the Earth, meaning the moon revolves around the Earth and the Earth revolves around the sun with its moon. Given the position of the moon in the Earth's solar orbit, how can the rotation of the sun and the moon be discussed or described together? This is only possible in one way, and that is a terrestrial observer observing the sky with the naked eye. By terrestrial observer, I mean primitive man, because in the modern era there is no one who can reduce the magnitude of the Sun to the size of the Moon. Now everyone knows where the Moon is and it has nothing to do with the Sun's galactic motion. But there are still educated people with the titles of Doctor and ... who pretend to be ignorant and, like primitive people, do not know where the Moon's orbit is and what role the Sun plays in this system. According to current knowledge, it takes more than two hundred and twenty million years for the Sun to complete its galactic orbit once. Considering the 200 million year orbit of the Sun and the approximate 27 day orbit of the Moon, no one describes the rotation of the Sun and the Moon together,

but when a person is possessed by a great illusion such as receiving revelation, anything is possible.
If the verse mentioned is considered a divine revelation, it is a great insult to the Creator because even a primary school student does not accept the combination of the rotation of the moon and the galactic movement of the sun. The moon is a part of the earth and has no direct connection with the sun. In other words, as the earth rotates, its creatures, including the moon, revolve around the sun. Given that verse 33 states the rotation of the sun and the moon simultaneously, how can modern man be sure that this is a divine revelation?
Just as the author of the aforementioned verse did not understand the difference between the rotation of the moon and the sun, we also do not understand the difference between the Creator and the earthly observer and accept false statements as the word of God.
The verses of the Quran that describe the rotation of the sun and moon also include the rotation of night and day. Therefore, in this section we will only examine the rotation of the moon and sun, and in the following sections we will go into the details of the cycle of night and day.
One of the Quranic commentators, Dr. Fereydoun Sahafi (search YouTube for "Expansion of the Universe, Big Bang, Orbits, Movement of the Sun in the Quran" and see his interpretations) read verse 33 of Al-Anbiya as it appears in the Quran and then interpreted it as follows.
The third issue is the issue of orbits: the orbits of the universe's spheres, stars, and celestial bodies, how they all move in orbits. Look, these came at a time when mankind had no knowledge of such sciences!
Verse 33 of Al-Anbiya explains the rotation of night, day, sun and moon (observations of an earthly observer, one who does not understand the position of the earth) and the commentator is apparently an alien (extraterrestrial), because he accepts the verse as divine revelation. He reads a verse that explains the rotation of night, day, sun and moon, but because he does not consider the

context of the text, he does not understand that the combination of the rotation of night, day, sun and moon does not fit into the human brain. By alien I mean not a being with a human body and a strange head, but a virus. What intelligent being can explain the rotation of night, day, sun and moon (the error of the earthly observer) as the orbits of the stars and planets of the universe? I think only a virus can provide such an explanation. That means that there is currently no person on Earth who can combine the rotation of night, day, sun and moon (the axial rotation of the Earth) with the 200 million year movement of the sun. When we say two hundred million years, it doesn't seem like much, but if we want to count from one to two hundred million, we have to count more than a full month.

Combining the two hundred million year galactic rotation of the sun with the rotation of the moon around the earth is completely unthinkable. Yet we accept the verse that combines the rotation of night, day, sun and moon as the word of God. Today, if a primary school student is asked: What does the rotation of night and day and sun and moon mean? The axial rotation of the earth will be the answer.

Since the text of the verse is understandable to everyone and the Dr.(commentator) has a university degree, he should have a better understanding, but since he is a hereditary Muslim, before any study he believed that the text of the Quran is literally divine and absolute. For this reason, a commentator with the title of Doctor cannot understand the simplest text, because his brain reservoirs are filled with obsolete beliefs.

Considering that the surahs and verses of the Quran compare the sun to the moon, if anyone has the slightest knowledge of the position of the sun, he would never compare the sun to the planets, let alone the moon. The planet Jupiter occupies more than thirteen hundred times the space of the Earth and has dozens of moons, but it does not cover even one hundredth of the mass of this system. That is, the sun is so huge compared to the moon that it is not easy to imagine.

How can the present man, whose space station is in an orbit around

the Earth, accept the mentioned verse and other written verses as divine revelation and pray for it? The commentator of verse 33 of Al-Anbiya introduces the cycle of night, day, sun and moon as science and says, these came at a time when man had no knowledge of such sciences (by such sciences, the commentator undoubtedly means the orbit of night and day). If the cycle of night, day, sun and moon, which is an error of the earthly observer, were to be considered science, today's elementary school students who understand the galaxy would have to claim to be omniscient. Describing the cycle of night, day, sun and moon is not science, but a great and repeated mistake of primitive man.

A person who did not even understand the position of the earth and described the rotation of the earth as the rotation of night, day, sun and moon is still worshipped as the messenger of the creator of the galaxies. Verse 33 is the statement of the earthly observer who, taking advantage of the ignorance of society, conveyed it as a divine revelation to the people of that time. Receiving revelation means knowing the hidden sciences and secrets, not specific things on earth such as night, day, sun and moon or stars that can be observed with the naked eye. Today we are equipped with eyes that transmit images of galaxies from millions of light years to the earth. Yet, we worship a God who has no knowledge of the structure of the universe. A creator who does not even understand the rotation of the earth, because our God belongs to ancient times and does not have armed eyes.

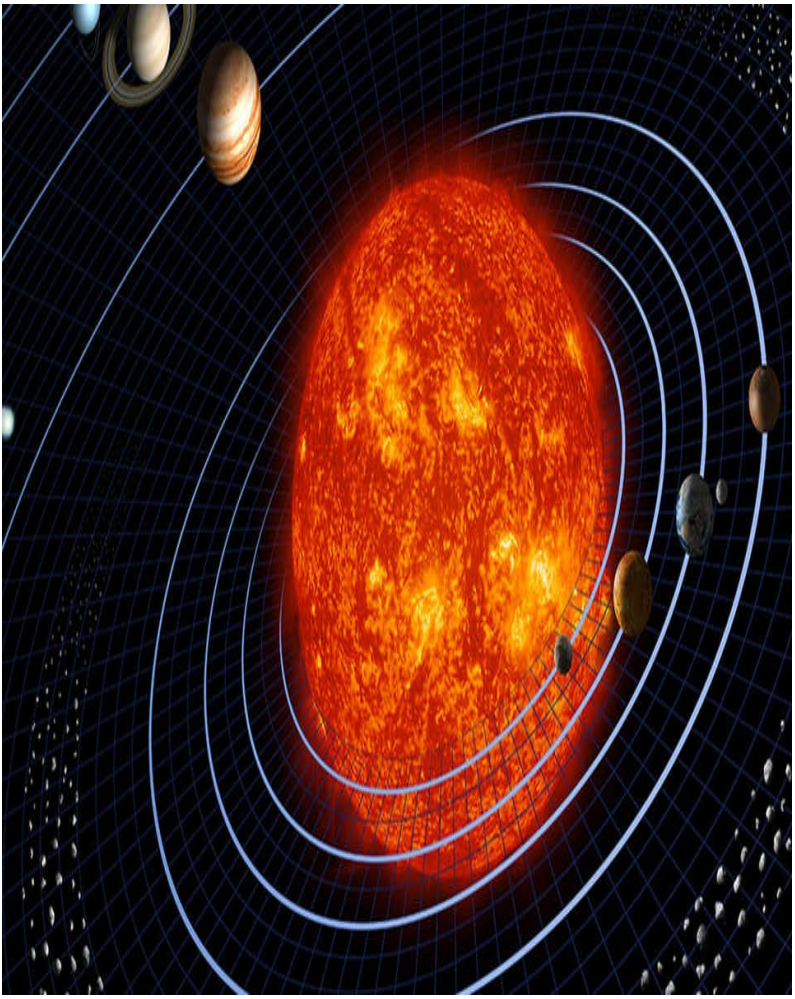
Since the term Earth's axial rotation is not common and I have used it many times, I will try to explain. Today, Earth's axial rotation is called ordinal and translational motion. Using the word motion instead of Earth's rotation gets on my nerves. Earth is not like a ship or a truck that moves, but like a ball that only has one rotation. Because on its mat (orbit) it constantly tilts to the left, tumbles, rolls, twists, turns over, spins and rotates. As you can see, none of these words can be called motion. Therefore, the most appropriate term for Earth's orbit is axial rotation.

Currently, the God of the books of religions is not accepted anywhere in the world, but is inherited, because in order to accept and believe

in something, it must first be studied and evaluated thoroughly and then believed or denied. Today, all religious people claim to have faith, while none of their faith is real, they simply believe that they have faith. They only believe in their beliefs and that's it, because they all came to faith without research and study. For example, I believed in the God of the books so much that I didn't even imagine that I would be able to replace my faith with something else one day, but after breaking the fence of prejudices, I realized that I had no faith at all. After that, when I remember my previous beliefs, I become extremely passive and depressed.

To prove that the galactic motion of the Sun is unrelated to the rotation of night, day, and the Moon, we examine the image below, which shows the position of the Earth and the Moon. An image that religious people can use to test their faith. Of course, after breaking the fence of prejudice, because the greatest obstacle to human insight is prejudice.

As the image below is designed, the planets and Earth's moon are visible, but in a real image, no planets are visible, let alone Earth's moon.



(Publicly available photo of the solar system)

Looking at the picture above, how can we accept the combination of the rotation of night, day, sun and moon as divine revelation? That is, verse 33 of Al-Anbiya (describing the rotation of the sun and moon) be related to the galactic movement of the sun. The point is that the books never describe the moon or the sun alone, and in every line that talks about the rotation of celestial bodies (the author) places the moon opposite the sun and describes the sun and moon simultaneously. In Surah Yasin, verses 37 to 40,

he first describes night and day, then describes the rotation of the sun and moon, and finally combines the sun, moon, night and day and says: The sun, moon, night and day do not reach each other, and each rotates in its orbit. This Surah, like other Surahs describing celestial bodies, is a combination of the rotation of night, day, sun and moon, but in this part of the Surah, the verses are briefly stated. That is, a verse is divided into four parts.

The commentators of the Quran explain verse 38 without referring to verses 37, 39 and 40 and say that the Quran mentioned the galactic movement of the sun 1400 years ago. The human brain, which is the highest being in the world, sometimes becomes so confused and dull that it interprets the statement of the rotation of the sun and the moon(an error of the earthly observer) as the movement of the sun for more than two hundred million years. Let us not forget that in ancient times, using the brain, we elevated stones and wood to the status of gods and then sacrificed our most beloved children to handmade idols. Therefore, the justification of the primitive man's view (the rotation of the sun and the moon) to the galactic movement of the sun or the creation of idols for worship is not the use of the supernatural brain of man, but the misuse of the creative brain. All the verses are the opinion of a primitive person who had no correct knowledge of the position of the celestial bodies and thought that God had created the sun and the moon as two lamps to illuminate the earth. (Surah Al-Furqan, verse 61: God created towers in the sky and placed the sun and the moon as lamps in them.) If the primitive person (the so-called Messenger of God) understood the position of the earth, he would never have explained the cycle of day and night in several surahs.

Whoever links the expression of the rotation of the sun and moon to the galactic movement of the sun, his brain is full of nonsense. As mentioned earlier, the human brain is a creator, but sometimes it creates a god from stone, illusion, etc. and bows down to it. People's brains are as different as their fingerprints. In such a way that one person creates God from a lump (rubbish) and another creates a working robot from scrap iron (metal waste). The similarity of the brains of all humans is like the abilities of each other's fingers.

That is, anyone can start a device by pressing a button, just as anyone can create different things using their brain. It is simply a choice that one creates God, heaven, etc. (trash) and the other creates robots.

It is unfortunate that an educated person with a PhD uses his knowledge (brain) to justify the expression of the rotation of the sun and the moon as the galactic motion of the sun and calls the error of the author of the verse (primitive man) the word of God. He proves with his irrelevant justifications that the galactic motion of the sun is mentioned in the Quran, but he does not ask himself why there is not even a single galaxy in the text of the Quran (its celestial sciences)? While the sky has trillions of galaxies. It is these galaxies that determine the order, life and continuity in the world. Certainly, everything in the world from atoms to life, order, stability and... is a galaxy, that is, without galaxies there is not even a single atom. People like Quran commentators go to schools at the expense of society, after receiving university degrees and acquiring the most important facilities, they use their powerful brains to justify or create nonsense. All brains have capabilities and the only difference between brains is in the choice. Therefore, the choice must be made with utmost care and confidence.Unfortunately, today most people, whether highly educated or ordinary, have an inherited choice. For example, Dr. Sahafi (commentator of verse 33 of Al-Anbiya) all his choices are the same inherited beliefs.

(Surah Luqman, verse 29)

Have you not seen that Allah merges the night into the day and the day into the night, and has subjected the sun and the moon, each in its course for an appointed term?

Primitive man, due to lack of access to technology (telescopes, etc.),had no knowledge of the structure of the universe. Therefore, the transition of night into day and vice versa was a very complex mystery for him. At that time, God would make the nights into days and the days into nights, and He would subjugate the sun and the moon so that each would revolve around the earth at a certain time.

If the above verse was revealed by an angel of God from heaven, why is there no reference to the rotation of the Earth that turns night into day? The moon does not have a daily cycle and revolves around the Earth approximately once every twenty-seven days, and it is this rotation of the Earth (not even implicitly mentioned in religious scriptures) that causes the daily rotation of the Sun and Moon from the perspective of an earthly observer. And also verse 33 of Surah Al-Anbiya, where Dr. Sahafi (the commentator) interprets the orbit of night, day, sun and moon as the orbit of stars and celestial spheres, is the rotation of the Earth. By interpreting the orbits of night, day, sun and moon, he is trying to praise and define the astronomy of the Quran. As he said, see, these came at a time when mankind had no knowledge of such sciences. In fact, he is right, because fourteen hundred years ago, no one would have thought that one day they would infer the rotation of night, day, sun and moon as the orbit of stars and celestial spheres. Describing the rotation of night, day, sun and moon was probably considered astronomy in the Stone Age, but in the age of technology it is irrational and very ridiculous, because neither night, nor day, nor sun nor moon rotates. It is the Earth that rotates the sun and moon, day and night, in the perspective of earthly observers, with its axial dance on the mat (orbit).

As far as I can tell, I do not believe that the majority of people today believe in the books of religions as the word of God, because none of the books contain a single true word about the structure of the universe or creation.

As mentioned earlier, anyone who wants to describe the structure of the universe must be familiar with the galaxy, while the writers of religious books did not even hint at the galaxy, because they were all alien to the galaxy. Those who say that the text of the books is celestial do not ask themselves, the sky above us, which has trillions of galaxies, why did the sky of the books not have even one galaxy?

Several surahs of the Quran clearly describe the cycle of night, day, sun and moon, without any hint of the rotation of the earth. If the Quranic text were divinely revealed (i.e. heavenly), it would

never describe the earth's axial rotation as a cycle of night, day, sun and moon. The Quranic text is certainly not heavenly, but rather the vision and imagination of primitive man, because the God of the Quran does not even understand the position of the earth. If a god were created in the age of technology, he would describe the body that forms the center of galaxies. The nucleus or entity that organizes trillions of galaxies, unlike the God of the Quran who repeatedly describes the cycle of night, day, sun and moon (the error of the earthly observer) in various surahs. The latter verse discusses the rotation of the moon and the sun, considering that the moon revolves around the earth and the earth revolves around the sun, if the rotation of the sun and the moon is raised simultaneously, the human brain (understanding and wisdom) is questioned. However, the Quran (the so-called heavenly book) repeatedly raises the rotation of the sun and the moon simultaneously.

(Surah Az-Zumar, verse 5)

He created the heavens and the earth with truth, covering the night with the day and covering the day with the night, and He subjected the sun and the moon, each running its course for an appointed time!

The author of the above verse did not understand the rotation of the earth. For this reason, he covers the day with night. The man of the day, who depicts his entire habitat (the Milky Way galaxy), accepts the above verse and other existing verses as the word of God.

If asked, why do people who have observed the rotation of the Earth and have depicted galaxies believe in the heavenly nature of religious books? The answer is: People live in the hope of the promised paradise of books, so that without that imaginary paradise, they have absolutely nothing for the future. Because hoping for paradise is easier than building the future, in this world of laziness, futility and human stagnation, who cares about the future and works hard to build it? Certainly (unfortunately) no one. Because building the future requires human unity, long-term planning, and a lot of effort.

(Surah Fatir, verse 13)

He has covered the night with the day, and He has covered the day with the night, and He has subjected the sun and the moon, each of them revolving in a certain course...!

Hiding night in the veil of day or day in the veil of night is not rational and understandable for modern man, because night and day are the rotation of the earth. Considering that the above verse and other existing verses have placed the rotation of the moon in contrast to the galactic movement of the sun, no adult should accept the galactic movement of the sun with the rotation of the moon, because the moon revolves around the earth. This is while more than a billion people have complete faith and trust in the statement of the rotation of the sun and the moon as divine revelation. At the time of writing the religious books, the rotation of the earth was a mystery. For this reason, the Quran has repeatedly mentioned the occurrence of night and day.

To remind and clear up any ambiguities, I intended to present only verse 40 of Surah Yasin of the Quran, but I could not convince myself. As a result, I present verses from different chapters of the books and I hope it will be effective and efficient. My best effort is to present the text of the books for review and judgment.

(Surah An-Nur, Verse 44)

It is Allah Who alternates the night and the day. Indeed, in this is a lesson for those who understand.!

In ancient times, when the Earth was fixed and the center of the universe, the movement (displacement) of night and day was the most important event that God revealed to His Prophet as a revelation, because at that time no one even imagined that the rotation of the Earth created day and night. Today, after breaking through the Earth's wall with spacecraft and creating an extraterrestrial space station, humans have taken important steps in acquiring cosmic knowledge, but the majority still worship a god who revealed the alternation of day, night, or similar events to his prophets.

When the majority of people are unaware of their creative abilities and do not have a clear understanding of the world around them, the result is what we are seeing now. With all these discoveries

and achievements of space science, when will man become conscious and throw this impotent god and the imaginary paradise of books into the dustbin of history and create a secure future for himself.
The change of day and night is caused by the rotation of the Earth, but in ancient times it was believed that day and night each have an orbit and revolve around the Earth. For this reason, the above verse states that the change of night and day is a lesson for those who have insight. That is, the sunrise and sunset are a lesson for the wisest people in human society.

(Surah Ar-Ra'd, verse 2)

God is the One Who raised the heavens without visible pillars, then He established Himself on the Throne, and subjected the sun and the moon, each of them running its course at a specific time...!

This verse also reiterates the theme of the cycle of the sun and the moon (simultaneously), while the orbit of the moon (the Earth's moon) is terrestrial and the orbit of the Earth is solar. The God of the Books resides in a place (an unmarked house) in the universe, above or below, and sends down whatever comes to His mind as revelation to His prophets, because He knows very well that He has many distorting servants on earth, and they distort and change His words in such a way that His words are forgotten. For example, Dr. Sahafi, who has interpreted and justified the rotation of night, day, sun and moon (verse 33) by the orbit of stars and celestial spheres.

The verse mentioned above states that God raised the heavens without pillars. Verse 10 of Surah Luqman also raises the issue of the heaven without pillars. How does this word of God (the heaven without pillars) change and what is it interpreted as? Only the God of the Books knows this great secret. In Surah Al-Hajj verse 65, it is stated that God restrains the heaven so that it does not fall to the earth. The commentators have interpreted the heaven as cosmic rocks and spheres and have said that God is merciful and does not allow rocks and spheres to fall to the earth (on our heads). This is while the author of the Quran had no knowledge of cosmic rocks and spheres and was even unaware of the existence

of planets in this system. With the least possible knowledge, he was referring to at least one planet.
When the celestial science of the Quran is compared with modern science, theologians (religious scholars) justify that the Quran is not a scientific book. If the Quran is not scientific, then what are all these so-called celestial verses about the structure of existence, such as the pillarless sky, the rotation of night, day, sun, moon, etc.? All the Quranic verses in this book, the celestial sciences of the Quran, which are related to its era, that is, fourteen hundred years ago. Because at that time, human knowledge was limited to the naked eye and this planet (Earth) was considered the entire universe. To prove the scientific nature of the Quran, I present verses that indicate the knowledge of the author of the Quran about the structure of the universe. According to the following verses, God began the creation of the universe (trillions of galaxies) from planet Earth.

(Surah Fussilat, verses 9-12)

Ask ˹them, O Prophet˺, "How can you disbelieve in the One Who created the earth in two Days? And how can you set up equals with Him? That is the Lord of all worlds.
He placed on the earth firm mountains, standing high, showered His blessings upon it, and ordained ˹all˺ its means of sustenance - totaling four Days exactly1 - for all who ask.
Then He turned towards the heaven when it was ˹still like˺ smoke, saying to it and to the earth, 'Submit, willingly or unwillingly.' They both responded, 'We submit willingly.'
So He formed the heaven into seven heavens in two Days, assigning to each its mandate. And We adorned the lowest heaven with ˹stars like˺ lamps ˹for beauty˺ and for protection. That is the design of the Almighty, All-Knowing."!
The above verses explain the process of structure and organization of the world. As mentioned in the above verses, God created the world (cosmos and discipline) in six days. First, He created the earth in two days, then in the next two days He created the sustenance of the earth, and finally in the last two days He established the order of the seven heavens.

In the structure of the Quranic universe, like the Torah, the creation of the universe begins with the planet Earth, and all the creatures of the universe, such as galaxies, etc., were created after life on Earth. That is, the God of the Books first creates the Earth and then the sky (universe) with its stars and birds. Because in the entire sky of the books there is nothing but stars or birds.
Modern man knows very well that it took about ten billion years for the sun to be born and this system (the Earth's orbit) to form. And then it took about four billion years for man to set foot on Earth (appear). When the discussion of the infinite scene of the universe is raised and the six-day creation of the God of the Books is questioned, theologians justify that six days are an example and each day is equivalent to a thousand years. This means that God created the universe over a period of six thousand years. Based on the calculations of the author and commentators of the above verses, God first spent four thousand years to create the earth and then two thousand years to create the heavens (a universe with more than two trillion galaxies). If six days is justified as six thousand million years, the problem of the creation of the God of the Books will not be solved, because it took only ten billion years for the sun star to establish its system in this galaxy.
Since the science of galaxy formation remains a mystery, modern humans may be able to infer 0.1 percent of the structure of the universe, because galaxies are the source of all order, stability, and life. And there is no place for life cells (atoms) to survive outside the galaxy. The galaxy is a safe place for the birth and life of stars. As soon as a galaxy is formed, it places all its stars in complete safety and protects each of them in a specific camp until the end of their lives. Just as our sun keeps each of its planets in a specific orbit.
Galaxies are the most valuable phenomena (leading light) in the present world. In other words, without galaxies there is no light and without light there is absolutely no dynamic being. Despite this fact, the author of the Quran in the above verses, without mentioning galaxies, has said that God created the earth in four days and the heavens in two days. Therefore, the celestial science

of the Quran is zero, because its creation does not have galaxies, and he who does not understand galaxies does not know the alphabet of the structure of the universe.

Those who justify the Quran's ignorance of the structure of the universe and say that the Quran is not a scientific book should state that the Quran is not heavenly. Because the Quranic verses in this book state that the Quran is very scientific, but its science belongs to the time of publication. For example, verse 40 of Surah Yasin says: The sun does not reach the moon and ... This verse (verse 40 Yasin) is a novel science that was discovered by an earthly observer, and this discoverer is none other than the author of the Quran. If the text of the Quran and other religious books were heavenly (from God), it would definitely explain the galaxy at the beginning of creation. Because the existence of everything such as space, time, life, the beginning and the end depend on the formation of the galaxy. If the central black hole or the galactic membranes collapse, the stars will quickly merge, turning the universe into a giant garbage dump. The stars of each galaxy form systems, and each star system gives order and life to its planets, like the Sun, which moves its planets, especially the Earth, in a safe orbit and makes life possible for its creatures.

All the wealth of the world today is galaxies, and our universe arranges and coordinates more than two trillion galaxies in its space. However, there is not even a hint of a galaxy in the religious books (i.e., the word of God that came down from heaven). Billions of people who believe one hundred percent in the God of the books and his promised paradise, look at the existing images of galaxies and then search for galaxies in the religious books. If they do not find a reference to a galaxy or something similar in the books, they should reflect a little on their beliefs.

(Surah Al-An'am, verse 96)

He causes the dawn to break, and has made the night for rest and ˹made˺ the sun and the moon ˹to travel˺ with precision. That is the design of the Almighty, All-Knowing!

All the verses of the Quran that describe the Sun include the Moon, because from the perspective of an earthly observer, the Sun and

the Moon move alternately, while the Moon revolves around the Earth and the Earth revolves around the Sun. The mass of the Moon is 20 million times smaller than that of the Sun. It is easy to say twenty million, but it is difficult to even imagine this number of moons. Twenty moons correspond to the planet Earth. So, if you can imagine 19,999,980 moons side by side or on top of each other.

The above verse also shows the understanding of the author of the Quran about the structure of the universe, which says that God split the morning, appointed the night for rest, and arranged the sun and the moon in order. That is, God Almighty determined the successive rotation of the sun and the moon. When someone writes that the sun and the moon each rotate in a specific order, it does not mean that the sun moves in the galaxy, but rather that it revolves around the Earth and nothing else. But the language of the commentators never fails, because they justify the verses related to the rotation of the sun and the moon in such a childish (irrational) way that the statement of the rotation of the sun and the moon (the error of the earthly observer) turns into a two hundred million year orbital motion of the sun. In fact, they(the commentators) do not need to explain and justify, because the audience has complete confidence and belief in the nature of the heavenly (divine) text of the Quran.

The commentators are highly educated people, but their brains are full of inherited beliefs, and until a spark of enlightenment shakes their brains, they will carry a sinister legacy for future generations. As mentioned earlier, higher education does not make us abandon our inherited beliefs. Therefore, a spark must be created in the brain so that a person can free himself from the prejudices resulting from inherited burdens. I hope this book will be a spark of light for those who have not yet been able to remove inherited beliefs from their brains.

(Surah Ar-Rahman, verse 5)

The sun and the moon run on their fixed courses(exactly) calculated with measured out stages for each!

In this verse, as in other verses of this book, the author of the Quran

has placed the moon opposite the sun and again stated the regular rotation of the sun and the moon. Since the sun is the center and fixed point of this system and the moon revolves around the earth, a mature and wise person would never say that the sun and the moon revolve regularly. Although the above verse was revealed to the earth from heaven by an angel of God, it combines the movement of the sun with the rotation of the moon. If the author of the Quran had not claimed that God was speaking to him, it would not have been a problem, because the people of that time had no knowledge of the structure of the universe. But unfortunately, not only did they claim that God had communicated with them, but they also imposed their ridiculous claim on others by force and violence, and that old method (bullying) continues today.

For some people who have no goal other than dominating others, the end justifies the means, meaning they resort to any means to achieve the goal. For example, one hundred and twenty-four thousand people violated their humanity and conscience in order to dominate others and claimed that God had communicated with them. Man, who is the intellect of all beings, if he distances himself from his conscience and perception (becomes alienated), becomes the lowest being in the world. Since the beginning of history, the most unscrupulous people who have caused the most harm to conscience and humanity by claiming to be prophets, continue to be worshipped as messengers of God.

If humans do not become aware and continue to dominate each other, some will start a nuclear war to dominate others and destroy all humans and other creatures on Earth. As you know, humans are not able to dominate themselves (others), but they are able to remove planet Earth from the solar system.

The modern human is not born a scientist, but begins to acquire knowledge at the age of two, and this process continues throughout life. That is, a human gains knowledge and experience at every moment of life. A one-year-old child sees the alternation of day and night, but is not curious, because nutrition surrounds all his thoughts. After being freed from the concerns of life such as food, clothing, and sexual desires, human thinking goes beyond the

needs of the body and flies above the spaces. According to modern science, man entered the earth (the terrestrial part) about 200,000 years ago. That is, today's man has a history of two hundred thousand years. Unfortunately, after 200,000 years of living on earth, man is still unable to free himself from the concerns of livelihood so that he can direct his thoughts above his head, that is, the world of galaxies. It has been about five hundred years since the discovery and confirmation of the rotation of the Earth, but the majority do not believe it, because they believe in a God who understands neither the position nor the rotation of the Earth. Today, there are nearly three billion Christians, and their God is the same God who condemned Galileo (the Elder of Wisdom) for proposing the rotation of the Earth. As you are aware, since Galileo was condemned, the Christian books (the Bible) have not changed. In other words, Christians deny the rotation of the Earth. Therefore, all Christians live in the age of the books (the Old Testament), while they are called modern man.

There are currently about two billion Muslims, and they all worship a God who, in several chapters of the Quran, has described the rotation of the earth as the rotation of night, day, sun, and moon. This means that God(the Creator of the universe) does not understand the rotation of the earth. Therefore, two hundred thousand year old humans, like infants, observe the rotation of day and night, but do not realize that this is the rotation of the earth. Just like a one-year-old child, without any curiosity, they only see the alternation of day and night. When sustenance and livelihood occupy the entire mind of a person, he thinks only of the promised paradise, not of the rotation of the earth or the like.

Since most of the Quranic verses in this book are repetitive, I apologize for including them all (necessarily). All the verses related to the rotation of night, day, sun and moon are part of the Quranic science about the structure of existence, so each one of them should be presented for evaluation.

(Surah An-Nahl, verse 12)

And He has subjected for you the night and day and the sun and moon, and the stars are subjected by His command. Indeed in that

are signs for a people who reason.!

An orbit is a physical (dynamic) path that surrounds an object in space due to centrifugal force. Such as the orbit of the moon surrounding the Earth. Therefore, anything that revolves in space must have mass, volume, and an orbit, because it revolves around an object. Consequently, night and day also have a body because they both revolve in space. As in the above verse and other verses, God has subjugated or displaced (rotated) night and day.

The author of the Quran has described the cycle of night and day, the sun and the moon in numerous verses of different surahs and has included all of them as divine revelation in the minds of his people, but in the entire Quran there is not a single word about the rotation of the Earth. This lack of mention of the rotation of the Earth in the Quran is because in the Age of Books, the Earth was stationary and at the center of the universe. As you know, the Earth began to rotate in the late 16th century, around the time Galileo was condemned by the Catholic Church's Inquisition.

(Surah Al-Ankabut, verse 61)

And if you ask them, "Who created the heavens and the earth and subjected the sun and the moon?"...!

As we see in the above verse and other verses of the Quran, the sun is connected to the moon and the sky to the earth. God's purpose in creating the earth is the realm in which we live, but the creation of the heavens is literally the universe and all its beings. The earth to the sky is like an electron to a cluster of galaxies. However, the author of the Quran describes the sky and the earth simultaneously, because in the Age of Books, the moon was equal to the sun and the earth was equal to the sky (the universe). The sky has trillions of galaxies and its dimensions are infinite for modern man. Furthermore, the God of the Books considers the heavens (universe) to be exclusive to the Earth, because the author (God of the Books) is unaware of the existence of galaxies, and someone who does not know about galaxies knows absolutely nothing about the structure of the universe.

In the above verse, God creates the heavens with the earth and subdues the sun alongside the moon, and theologians claim that

the text of the Quran was revealed to the earth by an angel from heaven. When they say it was revealed from heaven, they mean outer space. So, why does the creator of outer space of galaxies send only a few words like heaven, earth, moon, night, day, and stars as revelation to his prophet? While the world, especially in ancient times, was full of mysteries. For example, the mystery of the rotation of the earth. If the God of the books were true, he would at least have revealed the mystery of the rotation of the earth to his prophets (especially the author of the Quran). Not the rotation of night, day, sun, and moon which can be seen with the naked eye and has no mystery.

(Surah An-Naml, Verse 86)

Do they not see that We have made the night a place of rest for mankind and the day a light? In this (night and day) are signs for the believers!

If the question is asked: How do nights and days come about? My answer would be the earth's rotation. The earth's darkness and light are its regular rotations that give life and peace to living beings. In ancient times, when no one understood the rotation of the earth, the occurrence of day and night was a very complex mystery. For this reason, the Quran has discussed the occurrence of night and day in several surahs.

Today, humans guide their Voyager spacecraft beyond the solar system and speculate on the structure of black holes. Yet they worship a God who does not even understand the position of the moon and in every passage describing the galactic orbit of the sun, he also relates the orbit of the moon to it. The Creator who says (An-Nur verse 44) “The alternation of night and day is a lesson for those who understand.”

A God (the books) who has not revealed more than a few parts of the fabric of existence such as the sky, the earth, the sun (the stars), the moon, the night and the day to his prophets. The members of each sect oppose and fight each other in support of one of the prophets. Just like in the age of idolatry, the sects strive to please the gods (the old idol, the current prophet) and attack each other to force other sects to accept their prophet (the idol). Consider that

if the books had implied a galaxy, people would tear each other to pieces to please their god (the prophet).

(Surah Al-Isra, verse 12)

And We made the night and the day two signs [of power], We made the night dark and the day bright...!

In ancient times, when the universe was limited to the Earth, the occurrence of night and day was a mystery known only to God. Today, although the mystery of the Earth's rotation is clear to everyone and the dark night or bright day is not a mystery to the intellect, more than a billion people still praise and glorify a God who darkens the night (the verse above) and illuminates the day.

In these days (the age of counting galaxies) when the rotation of the earth is evident and proven, why should millions of people accept the above verse as the word of God and have complete confidence in the prophethood of its author? Why do hundreds of millions of people bow down to a book that does not understand the position of the earth and describes day and night as rotating? The planet earth rotates, its face towards the sun is bright and its back is dark. The author of the Quran, unaware of the rotation of the earth, made night and day two signs and made the nights dark and the days bright.

The author of the Quran, to whom the secret of the rotation of the earth was never revealed, claimed that God had contacted him. And even today hundreds of millions of people accept his claim with complete confidence. Today's Muslims know very well that the earth rotates, but because the text of the Quran is heavenly to them, they pray five times a day and seventeen rak'ahs for the love of the promised paradise. At the time of the emergence of religion, a time when no one understood the rotation of the earth, the unfortunate people had to accept the contact of God with the author (the prophet), otherwise they would be tortured, and if they denied prophethood under torture, then the sword of God would behead the atheists. The rotation of the earth is now completely clear, but not to those who consider the books of religions to be heavenly. The minds of the servants of the God of the books are

so immersed in the promised paradise that they do not know the obvious rotation of the earth, because if they did, they would not believe in the heavenly nature of the books. Of course, their faith and peace are not formed through research and study, but are inherited.

(Surah Al-Furqan, Verse 62)

And He is the One Who causes the day and the night to alternate, ˹as a sign˺ for whoever desires to be mindful or to be grateful.!

If the author of the Quran understood the rotation of the earth, the text of the above verse would be as follows: And He is the One who makes the earth revolve around the sun in an orbit with an axial tilt of about twenty-three degrees, to create the cycle of day, night and seasons, for those who ...!

Unfortunately, the person who was sent by God as a prophet did not understand the rotation of the earth. What can I say, the one who revealed the text of the books is the God of those who examine the surface of galaxies and determine the number of their star systems. Previously, when human knowledge was limited to religious books, the coming and going of day and night was not the simple event that we witness now, but rather an extraordinary event and divine wisdom. For this reason, the coming and going of day and night is described in numerous surahs of the Quran. Alternating Day and Night (verse above) Now everyone knows that the earth rotates, but in the past when the earth was stationary, God alternated day and night so that people would learn a lesson and be grateful. Of course, people today also pray to God who replaces night with day. As you know, there are currently about two billion Muslims around the world.

(Surah Al-Imran, verse 27)

You cover the night with the day, and You conceal the day with the veil of night, and You make the living ...!

The subject of the above verse is the concealment of night in day and vice versa, which was revealed by the angel of God from heaven. What kind of creator is this abrogated God (the Book) who does not even understand the position of the earth and who reveals many verses to his prophet about the concealment of days

in nights?
Imagine you are in ancient times (the Earth is flat and fixed) then answer this question: Where does the sun spend the nights and reappear in the morning? In ancient times, many questions like the one above remained unanswered, and the lack of a solution led people to follow the prophets and their books.
Theologians claim that religious books were revealed from heaven, while the books do not have the slightest knowledge of heaven (the creation of the world). The authors of the books refer to things in existence such as the earth, the sky, the sun (stars) and the moon, which are all above our heads and can be observed. The point is that the cosmic knowledge of the books is not beyond the naked eye, because what the books have said about cosmic objects is visible to the naked eye of an earthly observer. Therefore, the claim of prophecy and connection with the Lord of the worlds is a complete lie. Religious books do not have a single word about the galaxy, while without the galaxy there is absolutely nothing. If we say that the word galaxy is big and does not fit into the text of the books, the rotation of the earth, which children are aware of, the books have not even mentioned it, while dozens of verses clearly describe the rotation of night, day, sun and moon.

(Surah Al-Hajj, verse 61)

This is (the proof of the truth) that Allah covers the night with the day and makes the day appear dark with the night. And Allah is Hearing, Seeing!

Why should we worship a God who turns night into day without reference to the rotation of the earth? Doesn't the rotation of the earth create day and night? We are the ones who worshipped idols, regardless of whether they were made by hand. Today, in the age of galaxies, just as in the age of idolatry, we worship the God of books without regard to what they say. The content of the books is not important to us, what is important is that they are the word of God and were sent down from heaven by an angel.
The identity of day and night is undoubtedly hidden in the earth, because it has an axial rotation, but at the time of the writing of the Quran, due to the immobility of the earth, as mentioned in the

above verse, by the command of God, nights were hidden in the day and days in the night. The Quran has repeatedly specified the cycle of night and day and the disappearance of day and night, which are only nineteen cases in this book, but it does not even implicitly mention the rotation of the earth that creates night and day. Note that the Quran contains the words of God. Therefore, whoever says anything contrary to the Book of God or denies the divine revelation is sentenced to death as an atheist and a corrupter on earth and is hanged in public or beheaded.

(Surah Al-Hadid, verse 6)

He conceals the night in the day and conceals the day in the night, and He is aware of the secrets of the hearts...!

As long as the spherical nature and rotation of the Earth are not discovered and proven, the concealment of night in the day and vice versa remains an unsolved mystery. According to the above verse, the author of the Quran knew absolutely nothing about the position of the Earth and did not even understand its rotation. For this reason, he has concealed the night in the day. A book that repeatedly explains in detail the cycles of night, day, sun and moon and does not say a single word about the rotation of the Earth has about two billion followers (Muslims) and all its followers are completely confident in its divine nature.

The current people of Iran are called Muslims, while without exception (all converts) are hereditary Muslims. For example, my Islam continues from my father and grandfather in the same way, until my ancestors were forced to accept life under the sword of Islam under torture and death threats.

In pre-Islamic times, the Earth was known to be spherical, but the author of the Quran described the Earth as flat in a verse.

(Surah Al-Ghashiya, verse 20)

And the earth—how it was levelled out?!

The above verse and other verses in this book show the extent of the understanding of the author of the Quran about the structure of the universe. The one who claimed that God is in contact with him, his entire cosmology is summarized in the cycle of night, day, sun, moon and the like. The universe of the Quran is limited

to a part (the Earth) which is so small compared to the galaxy that if we consider it as a pinhead and divide it into a hundred thousand parts, we can put it in front of a galaxy and say, this also occupies a part of the space of the universe. Moreover, from the point of view of the whole universe, the galaxy is nothing more than a pinhead.

In verse 30 of Surah Al-Anbiya, it is stated that the heavens and the earth were joined together, so We separated them ...! The profound commentators of the Quran have extracted the Big Bang from it and have said that the heavens and the earth were joined together, and God separated them from each other with a great explosion (Big Bang). In fact, the content of verse 30 of Surah Al-Anbiya is the same creation as the book of Torah, which is repeated: "The creation of the second day = God separated the masses of vapor from the waters below and created the sky." The human brain is the absolute power and the supreme being in the world. Therefore, anyone can use their brain to connect or justify the contents of ancient books with modern discoveries. Since the interpreters of the Quran take the Big Bang from the creation of the Earth, today, when the issue of the absence of mention of galaxies in the Quran is raised, from which verse will they take the galaxy tomorrow? As mentioned earlier, the basis of the structure of the universe is the galaxy, and without the formation of galaxies, there will be no order and life.

(A fillip to those who say that the Quran is not a scientific book. When Quran commentators are confronted with questions that have neither answers nor justification, their language is inadequate and they admit that the Quran is not a scientific book. But, whenever they stand behind a podium where the audience is Muslim, they pull out the Big Bang from verse 30 of Surah Anbiya.)

(Surah Al-Imran, verse 190)

Indeed, in the creation of the heavens and the earth and the alternation of the day and night, there are signs for people of reason.!

The coming and going of day and night were signs of wonder to primitive sages who knew absolutely nothing about the structure

of the universe, to the point where they did not even have the power to understand the rotation of the earth. But to modern wise men who have set up a habitable space station, it is no wonder that nights and days (the rotation of the earth) come and go.
In today's world, more than a billion people are 100% certain that the Quran is the word of God, but how many of them have come to believe through study or investigation, only Allah (the author of the Quran) knows because all their faith and beliefs are inherited. Among living beings on earth, humans are not born with anything, but they determine their goals and ways to achieve their goals in life and over time, but other beings have life and death with what they are born with. All living beings that live involuntarily do not change in their life cycle. For example, a cat is born with its natural and limited intelligence and lives and ends its life without any change, just like a tree, but humans change at every moment of life. If people cross the barrier of this god (the books), they will reach a stage where each of them can live for thousands of years in perfect health and with a long life span conquer all the galaxies in the universe.

(Surah Fussilat, verse 37)

And among His signs (of Lordship and power) is the creation of the night and the day, and the sun and the moon ...!
Day and night are related to the Earth and the Sun and have nothing to do with the Moon, because the Earth revolves in its solar orbit and creates day and night. The Moon has no role in the process of day and night, but in ancient times, the Moon was the backbone of light after the Sun and ruled the night, just as the Sun rules the day. For this reason, religious books describe the Sun along with the Moon. As the above verse and other Quranic verses in this book place the Moon opposite the Sun.
I would like to remind you that the sun cannot be compared to the moon in any way, but from the perspective of an earthly observer, the moon is a small star and is compared to the sun. The point is that the authors of religious books have written their observations and opinions and it has never been a divine revelation.
To prove the illogicality of comparing the sun to the moon, I will

give a concrete example. Abdullah and one of his shoe pebbles are walking in the park and they don't reach each other. When we say that Abdullah is walking in the park with a pebble, it is very funny, because the pebbles around are attracted to Abdullah and get inside his shoes. The same is true for the sun and the moon, the moon is much smaller than a grain of sand in the solar system. However, in verse 40 of Surah Yasin, it is stated that the sun and the moon rotate in their orbits and do not reach each other. If we magnify one of the pebbles in Abdullah's shoe a million times, it would be much larger than Abdullah's body. While the moon is twenty million times smaller than the sun.

Theism claims that the texts of religious scriptures are the word of God and have been revealed from heaven. On the other hand, the God of the prophets reduces the greatness of the sun to that of the moon, does not understand the position and rotation of the earth, and, despite the trillions of galaxies, does not even hint at a galaxy.

(Surah Yunus, verses 5-6)

He (God) is the One who made the sun a shining light and the moon a light.... Indeed, the alternation of night and day, and whatever He has created in the heavens and the earth, are signs for men of understanding!

Any book that describes the sun and the moon simultaneously is undoubtedly conceived and written by an earthly observer, because only an earthly observer has the sun and the moon above his head. A primitive ignorant man looked at the sky and discovered that the bright sun and the bright moon were rotating one after the other. The reason for the word ignorant in the above article is that a wise man never reduces the magnitude of the sun to the level of the moon and does not relate the rotation of the moon to the galactic motion of the sun.

The ascension of the Prophet of Islam is called a scientific miracle because he traveled to the seventh heaven with the Al-Buraq. I am not an expert in space, but I have heard that if we leave the Earth's atmosphere, we will witness the rotation of the Earth. So, the Prophet of Islam, who flew and reached the seventh heaven,

must have at least observed the rotation of the Earth.
A new religion called Raëlianism has emerged, claiming that extraterrestrials landed on Earth in a spaceship and met with the prophet of the Raëlian religion (Claude Verrellhon). Raëlian's book states that the Prophet of Islam went into space in the spaceship Al-Buraq, not the Al-Buraq horse.I asked a member of the Raelians, Why did the Prophet of Islam, who went to space (the seventh heaven), not observe the position and rotation of the Earth? He replied: The Prophet's space flight did not last more than a few minutes and in these few minutes, he could not see much. I told him that one minute is sixty seconds and in sixty seconds the entire system can be evaluated.
You should ask the Raelian prophet who is still alive, where is the address of the beings who have come to visit you on Earth? Every being has an address. For example, my current address: Milky Way arm, solar system, Earth, Europe ... In other words, the official (cosmic) address of my current home is the Milky Way galaxy.
In one of the cyberspace groups, modern science and the heavenly teachings of the Quran were discussed: I pointed out that the Earth does not rotate in the Quran and there is no verse or sentence about the rotation of the Earth. A person whose avatar was wearing a turban said: Yes, the rotation of the Earth is mentioned in the Quran, for example, refer to verse 88 of Surah An-Naml.

(Surah An-Naml, Verse 88)

And you see the mountains, and you think them stationary, while they are like clouds moving ...!
According to the verses before and after, this verse is related to the Day of Judgment when the movement of mountains will cause terror to the sinners. In the above verse, not a single word is mentioned about the rotation of the earth, but these naive commentators are changing it and interpreting it as the rotation of the earth. Man, a being with the absolute power of deep thought, can change everything as he wants by activating his brain. He (man) is a phenomenon that carves a piece of stone and elevates it to the status of a god, then sacrifices his dearest child to his stone god. That is, if someone

misuses their brain (the human part),they will eventually become a being that dissolves under the laws of nature like a piece of stone. Can the movement of mountains be accepted as the rotation of the planet Earth? Why not? Just as a carved piece of stone was accepted as God. A book that clearly explains the cycle of night, day, sun and moon in numerous verses including Surah Luqman 29, Surah Fatir 13, Surah Al-Anbiya 33, Surah Zumar 5, Surah An-Nahl 12, etc., why is it so implicit and obscure when it tries to explain the rotation of the Earth that the audience must accept the movement of mountains on the Day of Judgment as the rotation of the Earth in this world?

After I shared my questions on the group page, instead of responding, they blocked my account. There is another verse that commentators have extracted (rationalized) for the rotation of the earth. The word “rationalize” is more appropriate for those who have interpreted the Quranic verses in this book. The Quran explicitly mentions the rotation of the sun and the moon, and commentators relate verses to the rotation of the earth that are not at all understandable, so that the only way to connect them to the rotation of the earth is a rationalization. The commentators know very well that the author of the Quran did not understand the rotation of the earth, but two inhibiting factors (inherited beliefs and lack of spark in the brain) prevent them from accepting the facts.

(Surah An-Naba', verses 6 and 7)

Have We not made the earth a cradle (a resting place)? And have We not made the mountains like pegs?!

Since the cradle is a resting place, God made the earth a resting place for humans and nailed the mountains to the flat earth so that the flat surface of the earth would not frighten people. The commentators have interpreted verse (6) as follows: God made the earth a cradle, the cradle shakes and this is the rotation of the earth. The commentators should be asked: When the cradle shakes, does the earth rotate on its axis or in its solar orbit?

Regarding mountains and people's fear of a flat earth, verse 31 of Surah Al-Anbiya states: "And We have placed on the earth firm

mountains to protect people from the anxiety of the (flat) earth...!"
Those who interpret the imaginations and arguments of the author of the Quran, such as the earth being a cradle and the movement of mountains, to the rotation of the earth, or those who relate the rotation of the sun and moon to the galactic movement of the sun, are non-terrestrial beings. Because there is no being on the surface of the earth that can provide such justifications.

(Surah Al-Shams, verses 1-4)

"By the sun and its radiance, and by the moon that follows it. By the day when it illuminates (the world), and by the night when it covers (the world) with a black curtain!".

In ancient times, when the Earth was stationary and the center of the universe, day and night encompassed the entire universe. With the light emitted by the Sun, half of the Earth and part of the space around it are illuminated. Despite the insignificance of day and night in the universe, God says in the above verse, day (sunlight) illuminates the world and night (half of the Earth) casts a shadow over all of existence. Because at the time the Quran was written, no one had the slightest knowledge of the position and rotation of the Earth, God's knowledge is still limited to the naked eye of man. I will remind you repeatedly: From the perspective of an earthly observer (primitive man), the Sun is a lamp that God created specifically to illuminate the Earth (the universe of that time). For this reason, day and night encompass the entire universe.

If the texts of religious books were revealed by God and from heaven, why are their celestial sciences set for a specific period of time (ancient)? If the God of Books created the universe, why is the creation of the Creator of galaxies limited to the Earth and has no reference to galaxies? The answer is: the birth, life, and death of the God of Books took place in ancient times.

(Surah Al-Qiyamah, verses 6-9)

They ask: When will the Day of Resurrection be? When the eyes will be filled with fear, the moon will be darkened, and the sun and the moon will be gathered together!

God called the author of the Quran through an angel and revealed

the book of the Quran to him. In the above verse, the Creator of the galaxies revealed to His Prophet when and how the Day of Judgment will be: when the moon will be dark and the sun and the moon will come together. This word of God that says the moon (on the Day of Judgment) will be dark is meaningless and far from understanding, because the moon never emits light from itself and disappears when the sun collapses. Today, when everyone knows that the moon reflects the light of the sun, nearly two billion people worship the Quran.

On the Day of Judgment, when the sun will collapse and the moon will become dark, people will go to the roofs of their houses to watch the convergence of the sun and the moon. This is the Day of Judgment that the angel of God revealed to the author of the Quran. According to the author of the Quran, the sun and the moon are two lights that God raised to illuminate the earth, and the earth is the place of the end of time (i.e., the end of the current universe). For this reason, on the Day of Judgment, when the sun and the moon come together, the earth will be in its place. Because the earth is the place where all cosmic objects end their cycles and fall on it. That is, several trillion galaxies, each with hundreds of billions of stars, fall on the earth, and this is the understanding and inference of the Messenger of God about the structure of the universe. A God who sat on bare ground and considered all existence to be limited to planet Earth.

We live in an age of science and technology, but we worship a God who has no knowledge of the sun, let alone the structure of the universe. Our God did not even understand the position of the moon and revealed to his prophet that the Day of Judgment will be the meeting of the sun and the moon. The sun provides energy for a space of twenty billion kilometers, and the Day of Judgment of the Quran is the meeting of the sun and the moon. Today's Muslims know very well that the moon cannot be compared to the sun in any way, yet they accept the above verse (the gathering of the sun and the moon together) as the word of God. To today's armed eyes, comparing the moon to the sun is ridiculous. The greatness of the sun is beyond the imagination of the naked eye.

For this reason, the author of the Quran could not even imagine the greatness of the sun. The author of the Quran also considered the moon to be a small star and described it exactly as he observed it, like the creation of the fourth day of the Torah, where God creates two lights (the sun and the moon).
The above verse says: The Day of Judgment is when the sun and the moon come together. The moon's orbit is terrestrial and if there is no centrifugal force, it will fall to the earth, and when the moon falls to the earth, the Hour of Judgment will come for humans. However, God revealed to the author of the Quran that on the Day of Judgment, the sun and the moon will come together. The God of the Books has never described the sun alone, and wherever the name of the sun is mentioned in the books, the moon is opposite it. The combination of the moon in the description of the sun is not rational at all because describing the sun at the same time as the moon does not fit into the human brain in any way.
I wish I worshipped a God who would at least swear by the awe or grandeur of a celestial body like a galaxy(for example, Alcyoneus). A galaxy 16 million light years across is worthy of an oath, but unfortunately my current God(the Quran) has sworn by the majesty of Mount Sinai. Mount Sinai, which can be razed to the ground, has no awe or grandeur.
(Surah At-Tin, verse 2) “And [by] Mount Sinai”
At the end of presenting the verses of the surahs, I will quote verses from which the interpreters of the Quran have extracted the galactic motion of the Sun and proved that the Quran described the galactic motion of the Sun fourteen hundred years ago. It should be said that the star of the Sun is located in the arm of the Milky Way galaxy. This arm, with millions of stars like the Sun, rotates approximately once every two hundred million years, and the Moon revolves around the Earth in a little more than twenty-seven days. Considering that the Sun moves with the arm of the galaxy and the Moon revolves around the Earth, the Quran has repeatedly combined the rotation of the Moon with the description of the galactic motion of the Sun, only twelve of which are mentioned in this book. The point is that the Messenger of God did not understand the rotation of

the Earth. If the author of the Quran had understood the rotation of the Earth, he would certainly not have described the rotation of the night, day, Sun, and Moon in detail in many verses of the surahs.

If a rational person explains the galactic motion of the Sun with the rotation of the Moon, human intelligence is questioned, because a perceptive being would never combine the daily rotation of the Moon (an error of the Earthly observer) with the two hundred million year rotation of the Sun. The basis of our world is the galaxy. That is, everything in the world, from an atom to a star system, depends on the existence of the galaxy, and without the formation of the galaxy, nothing (even existence) exists. However, the text of the Quran (claimed to be divine and heavenly) not only does not mention the galaxy, but its universe is limited to the Earth, around which night, day, sun and moon revolve one after the other. As mentioned in the pages above, the cycle of night and day and sun and moon is described in dozens of verses of the Quran. Since the text of the Quran is the word of God, everyone should accept it without doubt and investigation. The following verses are an example of the word of God that the interpreters of the Quran present as the galactic motion of the Sun. Note that the verses of the Quran were revealed to the Prophet of Islam by God (i.e. the Creator of the galaxies).

(Surah Yaseen, verses 37, 38, 39, 40)

And another proof for them is the night, which when We take away from it the day, suddenly it is plunged into darkness.

And the sun runs in its course, That is the design of the Almighty, All-Knowing.

And We have appointed the moon in appointed stations, that it may return as the withered branch of a date-palm.

The sun does not overtake the moon, nor does the night overtake the day, but each is travelling in an orbit of their own.!

The above verses, like verse 33 of Surah Al-Anbiya and .... are a combination of the rotation of night, day, sun and moon, which is divided into four parts here. As seen in the aforementioned verses, verse 37- explains the existence of night and day, verse 38- the

rotation of the sun, verse 39- the rotation of the moon and verse 40- like other Quranic verses in this book, specifies the rotation of night and day and the sun and moon. This verse, like other verses related to the rotation of cosmic objects, has placed the moon in front of the sun based on the author's understanding of the structure of the world. The commentator of the Quran, without referring to the verses before and after, deals with verse 38 and explains it very scientifically. His arguments and justifications are given below.

«Even the sun has been proven by science today to be moving in an orbit, in Surah Yasin verse 38, and the sun goes to the place it should go, by the command of God. That is, the sun is also moving in an orbit, because we think that the sun is fixed and all the planets in the solar system revolve around it, but today science has proven that the sun is also moving in an orbit. The sun is moving in an orbit towards the star Vega at a speed of 17,280,000 kilometers per day.»

(Dr. Fereydoun Sahafi)

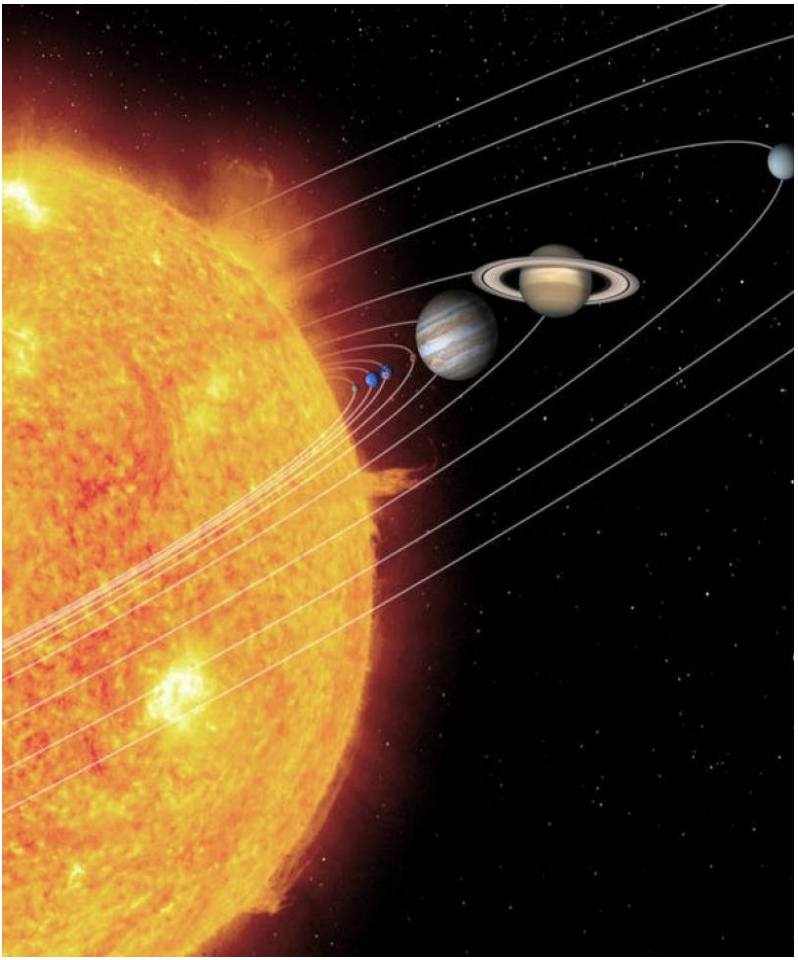
The author of the Quran in the above verses describes the rotation of night and day, the sun and the moon, and the doctor(commentator) interprets the celestial observations of man 1400 years ago as the galactic movement of the sun. Today's man, using one percent of his brain capacity, will have the necessary awareness to understand the above verses.

What does the galactic motion of the sun, which takes more than 200 million years, have to do with the rotation of night, day, and moon? Anyone who describes the galactic motion of the sun, if he combines it with the rotation of night, day, and moon, must have a skull without a brain. When the author of the Quran repeatedly describes the rotation of night and day, and the sun and moon, why do the commentators not understand the very simple text, which is the perspective of an earthly observer? Answer: The beliefs of the commentators are inherited. If the interpreter of the above verses takes a look at verse 40, he will better understand what the author means by the rotation of the sun. Note that verse 40 has multiple purposes and meanings. For example, the sun and

the moon revolve around the earth in their orbits and do not collide with each other, night and day each travel their own orbits and do not overtake each other. That is, day and night are masses and revolve around the earth.
If the topic of the rotation (orbit) of day and night is raised, it is not compatible with the intellect and intelligence of modern man, because the earth rotates and one side of it becomes light and dark. There is no orbit called day and night, because day and night are not masses. Each orbit has two masses. For example, the moon is a small mass that is in the orbit of its larger mass (the earth). Therefore, the one who describes the rotation of day and night shows his negligence and stupidity. With the explanation I gave about the orbit, I think we should refer to the elementary school to explain the verses that describe the rotation of day and night. Keep in mind that if the rotation of the Earth had not been discovered and recorded (as in ancient times), no one could doubt the text of the above verses, which are the word of God.
Everyone's words and actions show their level of consciousness and way of thinking (determine their life goals). For example, an ancient book states that day and night revolve in their orbits and do not overtake each other. If the audience uses their brain to compare the text of the book with the knowledge of the day, they can judge the level of consciousness and way of thinking of the author. With the exception of humans, the level of intelligence of all living beings is the same. For example, monkeys, dogs, ants, etc. understand and think at the same level, because they live involuntarily and make a living using their natural and limited intelligence. Even trees have intelligence, but at a lower level. As you probably know, when summer approaches, the tree opens its leaves to protect its roots from the heat of the sun. Also, in autumn, when winter is approaching, the tree drops its leaves on the ground (edge) so that the winter cold does not penetrate the roots. Unlike other living beings, the intelligence and talent of humans (of course, if they understand the supernatural brain) has no level and is infinite. I should add that making a living(saturation for survival) is not using the supernatural part of the human brain, because all living beings on

planet Earth make a living using their limited and natural intelligence. Therefore, people who flaunt the food(money) accumulated from their job or position as intelligence and resourcefulness should know that animals and insects also have this intelligence and ability. For example, ants store much more food and shiny things than their own bodies.

When I see the image below, which shows the position of the Earth and is available to everyone, I think to myself: Why would beings with supernatural brains accept the cycle of night and day, the sun and the moon as revelation and the word of God?



لَا الشَّمْسُ يَنبَغِي لَهَا أَن تُدْرِكَ الْقَمَ رَ وَلَا اللَّيْلُ سَابِقُ النَّهَارِ وَكُلٌّ فِي فَلَكٍ يَسْبَحُونَ ...

The above verse: the sun does not reach the moon, and the night does not overtake the day, and ...!

According to the image above and other images showing the position of the sun and its planets, the person who says the sun does not reach the moon has the lowest level of consciousness(perception), because he expresses his observations without using his brain. Similarly, the person who says that day and night do not overtake each other has not thought about what he says at all, so that we

can assess his level of intelligence. Apparently, there is a driving force in the night that the Prophet of God said does not overtake the day. I remind you again that the earth rolls like a ball on its mat (orbit) and one side of it is light and the other side is dark. So whoever says that the night does not overtake the day has neither reason nor logic. As you know, ignorant men express opinions without using their brains and attack every (wise) critic with the logic of the sword. The statement that the sun does not reach the moon and that night does not overtake day is not rational and acceptable, because the position of the sun is such that a wise person would neither accept nor raise the above issue. In the past, when the position of the sun revolved around the earth like the moon, it was obvious to people that the sun does not reach the moon. Because it was justified at that time, but today, when images designed or received from telescopes clearly show the position of the sun, if we say that the sun does not reach the moon, it is a great insult to all of humanity, because it calls into question the human brain (understanding and consciousness). In times when the secret of the Earth's rotation was hidden, the cycles of night, day, sun, and moon were used to describe the power of God Almighty. For this reason, the God of that time would rotate night, day, sun, and moon one after the other, not allowing them to collide or overtake each other.

Muslims, hoping for the promised paradise, invoke a God who does not even understand the position of the moon and says that the sun does not reach the moon. Certainly, the author of the Quran believed that the sun rotates and then the moon rotates, and this successive rotation causes the sun to never reach the moon. To re-evaluate the celestial sciences of the author of the Quran, I would like to remind you that the moon is in the solar orbit of the Earth and has nothing to do with the rotation of the sun. Most commentators of the Qiblah have said that the galactic movement of the sun is mentioned in the Quran. The question is, why does a book that mentions the galactic movement of the sun not say anything about the galaxy itself? While the origin and norm of everything is the galaxy. The space in which living beings breathe

or phenomena reside is created by galaxies, and our world has trillions of galaxies. Currently, humans living in the safety of the galaxy hope to reach the promised paradise of books that do not even have the word galaxy in their text.

It is not wise to expect an obsolete book to have the word galaxy in its text. Therefore, we offer the galaxy to the commentators and ask them to find only one implicit reference to the rotation of the earth in the text of the Quran, a rotation of which a primary school child is aware. The Quran, which claims to be heavenly (supercosmic), not only does not mention the rotation of the earth, but its author mistakenly describes the rotation of the earth as the rotation of night, day, sun and moon.

As I explained in the pages above, by studying religious books and comparing their sciences with today's science, I came to the conclusion that a god called the God of Books does not exist. Because all the statements in the books about the structure of existence are completely wrong and anyone who uses their brain while studying will never accept the writings of books as the word of God. Considering the content of the books, none of the authors knew about the wisdom of the rotation of the Earth, because there is no text or even a word about the rotation of the Earth in the books. Therefore, the God of Books was created in the mind of primitive man.

Since the beginning of life on earth, man has had a vague and terrifying future, and the fear of an unknown future forces man to find a way to escape from the fear of the future moments. Because our ancestors had nothing but fear of the future, they created this God, because the more they thought about the future, the more they were immersed in fear. Like our ancestors, we have nothing for the future except an imaginary paradise created by a mental god, and this vague and terrifying future has forced us to worship such a god (the books).

We, who live in the age of counting galaxies, if we do not plan an ideal and secure future for ourselves, we are beings who worship a created god. Thinking about the future (creating a secure future) is the most difficult task, because to build the future, all people

must be united and one nation, and this human unity is impossible in the current era (creating gods).
When we were immersed in illusion, we imagined this God in our minds and asked Him to make the future a paradise for us, and it happened. Since God has prepared paradise for the hereafter, we live comfortably (without worrying about the future). But this comfort will not last until the end of our lives, because we believers in paradise, every moment by depleting resources, accelerate the death of life on earth. Today we have a God who guarantees our future life (the resurrection) in paradise. As a result, to end several decades of life on earth, we perform religious duties according to the word of God and then enter the world of the hereafter(paradise). However, ending several decades of life on earth is not an easy task, because currently wasting time (filling the remaining moments after saturation) is the biggest problem of human societies. For example, some people hate this life and commit suicide. It is impossible to provide exact statistics on suicides, but more than one million people in our world commit suicide annually, and the number of suicides increases every day. At present, we are exempt from planning and trying to build the future, because we have chosen the paradise of books for our future. Therefore, we only need to end our lives so that after death we can have a carefree and eternal life in the promised paradise. That is, life on earth prevents man from entering a comfortable life in paradise. For this reason, we hasten our death so that we can experience a trouble-free and continuous life in paradise as soon as possible.
Today, a significant percentage of the world's people turn to drugs to end their decades of life on earth and spend most of their lives in a state of intoxication. The number of people living in a drug -dependent environment reaches hundreds of millions in the world. For this reason, drug addicts are a major problem for the entire world. Despite the establishment of addiction treatment centers in all countries, the number of addicts has not only not decreased, but is increasing daily.
Following the unsolved problem of drugs, there is a big problem called alcohol and alcoholism. People who suffer from alcohol

all over the world are called alcoholics. They fill their moments with drinking alcohol and spend most of their lives in a drunken state. The amount of alcohol production and consumption in the world is not known, but according to statistics, in 2012, more than three million people died due to alcohol consumption. All this intoxication, drunkenness, death from alcohol and drug abuse is the result of people's distrust of the future, because the future is uncertain and human life is short. As mentioned earlier, humans, unlike other living beings, have supernatural and creative brains. But most people today do not want to be humans who use the supernatural part of their brain to fly over the fences of nature and plan an ideal environment, but rather they want to be subject to the laws of nature like animals and create all kinds of drugs, alcohol and entertainment with their creative brains. Therefore, people want to remove that transcendental part of the brain from their skulls by using drugs, alcohol, etc. so that they can, as they say, live with love and joy. I used to have a friend who drank a lot of alcohol. I asked him, why are you destroying your body? He answered with intelligence: I will not give a healthy body to Azrael. He believes in God and prophets, etc., but he prefers the drunkenness of this world to the paradise of the hereafter. He is much wiser than those who never use their brains and prostrate themselves and shed tears to reach the promised paradise of the books.

The above-mentioned people (drug addicts or alcoholics) are not a high percentage, they may constitute ten percent of the world's population. Citizens of current countries spend their lives in various ways. For example, some go to gambling houses such as casinos, bingo, etc. and spend hours of their time gambling. Bingo, which is called Deberna in Persian, is a gambling house that most retirees are attracted to and if they are financially well-off, they spend their whole day there. Because bingo is a game based on luck and is very exciting. Of course, about eighty percent of the money that players put in (buying bingo cards) goes into the pocket of the bingo owner (the scrounger). In bingo halls there are gambling machines called progressive jackpots that attract all ages over

eighteen. Those who do not have the opportunity or chance to go to a casino choose casino machines located in bingo halls to fill their time. Jackpot machines located in bingo halls and other locations such as shops, cafes, gas stations, etc. are so addictive that some countries have imposed daily and monthly limits on playing with them.

In countries where casinos are allowed, there are people who call themselves professional gamblers and make a living by playing poker, meaning they spend their entire lives playing cards. Of course, in today's world there are countless people who have no other profession or business except for hobbies such as playing poker, acting in movies, playing in sports competitions, etc., and they all make a living through games and entertainment. For example, movie stars, football stars, golf stars, etc., numbering in the tens of millions, all of whom play full-time like a three- or four-year-old child. Today, each professional player covers several people as bodyguards, coaches, cooks, etc., whose families also make a living through games. In other words, the number of people who earn their daily bread through games can be hundreds of millions.

As mentioned in religious books, God has prepared eternal paradise for man. So these God-fearing people should end their life on earth with games and entertainment, that is, die and reach a carefree life in paradise. But choosing a hobby to waste time will not be an easy task, because with the passage of time, all entertainment becomes boring. How long can humans entertain themselves with games like puzzles, soccer, billiards, poker, gambling machines, etc.? Although these games are attractive and exciting, they become obsolete over time, and when people face problems such as livelihood, illness, and abnormalities, they cannot entertain themselves with childish games.

All cash gambling such as slot machines, casinos, bingo and the like are available on internet sites, and gambling sites simply empty the user's bank account balance with advertisements (seducing users) and deposit it into the site's account. Internet gambling is gradually becoming a major social problem. When users enter

cyberspace alone and are influenced by advertisements (deception) on gambling sites, there is a possibility of losing their lives.
Today, most ordinary people are looking for big money so that they can spend most of their lives having fun, and capitalists are looking to attract more capital, and it is these capitalists who always succeed. Because all of them (without exception) are unscrupulous, fraudulent and plunderers of other people's food tables.
Blackmail (Talakeh in Persian) is the most shameful act among Iranians. A person who arranges gambling for his friends and acquaintances in his home, sits on the sidelines and takes a percentage of the gamblers' money is called a talakeh-kon or talakeh-gir. This means that the people who play sometimes win and sometimes lose, and at the end of the game, only one person wins and that person is the talakeh-gir. All gambling places such as casinos, bingo, shops (with everyday equipment) that install gambling machines, and online betting sites are all talakeh-kons without exception. But none of them have a problem with taking-talakeh, while talakeh-gir is the most heinous act. In explaining the word "talakeh gir," two male brothel employees were arguing with each other. One said, "You took the prostitutes' customers to your home and served them." The other replied, "That's true, but I never took talakeh. You took your brother and your friends to your home and took talakeh." That is, taking-talakeh is so shameful that selling honor is better than it.
Man is inherently a social and competitive being and has always been and will always be in competition. Competition occurs when different people or animals live in the same environment. In the early millennia of human life on earth, there was intense competition between man and wild or predatory animals. By utilizing the power of perception, man controlled fire and mixed it with his life, then with unity and resourcefulness he dominated the creatures of the earth and subdued everyone. Man, who was not a rival to any predator when he first entered the earth and was hunted and eaten from all sides, after a short time, by taking over the earth's resources and dominating the animals, he eliminated all competitors from

the field of competition and became unique and unrivaled on the planet. After becoming the only one on this planet and unrivaled, man had to move his thoughts above his head and enter other parts of the galaxy to find real competitors. But unfortunately, man (this intelligent and creative being) lowered his head and, observing the way animals live, established competition with himself (his own kind). Just like animals that compete with each other. For example, a pride of lions chooses an area for feeding and designates it as their territory, and if a strange lion crosses their border, it is attacked and killed if it does not leave.

As the living environment became safe, humans multiplied and migrated to different parts of the earth. When people settled in many parts of the earth, they modeled the lifestyle of animals and each group set boundaries around its environment and prevented strangers (other groups) from entering this area. Thus, borders were created on the earth and people began to make weapons to secure their homes within the borders and the result is what we see today.

Humans (the conquerors of the planet Earth) have divided the Earth into several parts. For example, the five continents are Europe, Asia, Africa, America, and Australia. Each continent has several different countries, so that there are currently nearly 250 recognized countries and territories on Earth. In today's world, every country, fearing an attack on its own country or creating terror among the countries of the world, prepares weapons(purely for killing humans) and demonstrates the extent of destruction of its weapons through military maneuvers. The current arms race is a competition between the people of the world that gives motivation and meaning to their lives. Countries threaten each other with their innovative weapons, and the citizens of each country form an army to confront threats and possible attacks from other countries. The power of each of the world's armies lies in its more destructive weapons and the mass of its warriors.

The countries with the largest number of nuclear bombs are Russia, the United States, China, France, and the United Kingdom, which make decisions for the entire world (all countries) in the Security

Council, because they have highly destructive nuclear weapons ready to be fired.

Any country that has access to nuclear weapons technology tries to dominate countries that do not have nuclear weapons. For example, country X (A) has expanded its dominance throughout the world with more than five thousand nuclear weapons and by deploying its atomic bombs in several countries, it dictates its goals and decisions to other countries in the world.

The aforementioned country (X), which has almost the largest number of nuclear bombs in the world, is constantly looking for a way to prevent other countries from acquiring nuclear weapons because it claims(dictates)that nuclear weapons are very dangerous. That is, the weapons of country X are benign and other weapons are malignant and dangerous. Therefore, only country X can have nuclear weapons, because the weapons of other countries destabilize its dominance.

If man can put an end to the futile competition (arms race) between man and man by utilizing his brain more, then he will change the law governing existing societies, which is more hideous than the law of the jungle, and pave the way for his own evolution in unity and plurality. Man is one of the living beings on earth who, after dominating the creatures of the earth, follows the path of self-domination. A path that leads to the destruction of humans and other creatures on this planet, because man is not able to dominate himself (his fellow creatures), but he is able to destroy himself. Just as he has suicide as an option. Man is inherently a competitive being, and competition makes him go through the stages of his evolution, but unfortunately today man has no knowledge of his own evolution. For this reason, a being who has perception and free will has accepted this earthly life under the laws of nature (inevitable) and very painful, because he sees the promised paradise of books in his dreams, and this imaginary paradise prevents him from moving on the path of evolution. Researchers believe that today's man was initially in the form of another animal like a fish or something similar and turned into a monkey and then evolved into his current form. Human evolution is actually the use of one

hundred percent of the brain (of course the supernatural part) and self-knowledge. Exactly, a being with the power to create an ideal world (ideal environment or galaxy).
At present, the past and future of man are hidden and completely unknown, and no one knows anything about himself. For example, where was man, this embodiment of power and genius, before he appeared on Earth, and how did he come to Earth? To seek the answer, we must leave the solar system. Since we cannot leave the system with the facilities of Earth, we must travel to other planets to obtain the means of leaving the system. How can we leave the solar system when we do not have the ability to live outside the Earth? Humans alone are not able to provide for the needs of life, but in plurality and unity, they can be called omnipotent. So, leaving the solar system will not be a difficult task. In order to fly to the planets and transfer planetary resources to the Earth, humans on Earth must compete with each other as quickly as possible. Unfortunately, today it is not the unity of humans, but the desire for superiority that drives people to fight with each other or compete in childish games to waste time and destroy the earth's resources.
We have divided the planet Earth (the current home of man) into more than two hundred pieces (countries). Today, the people of every country love the borders of their country so much that the most beautiful and common sentence of the day is patriotism, while a patriot worships only a part of the earth. As you probably know, every patriot loves his country immensely and if he does not hate other countries, at least he does not have any attachment to them. Those who claim to be patriots, if you are truly patriots, go and make other planets your homeland and if you are not capable of such a thing, please do not divide the planet Earth, the only current home of mankind, into pieces.
Humans, the so-called superior beings of the Earth, demarcate and fence their territory, while there are no predators or extraterrestrial enemies. Predatory animals that have been subdued and tamed and there are no other threats. So, when people spend most of their wealth protecting their borders, what are they afraid of? Today,

in some countries, people are hungry, while millions of tons of food have been turned into weapons and have covered the external borders of countries. And this abundance or lack of food in some countries is due to the patriotism of people who are leading the entire human world (earth) to destruction. If we examine the annual budgets of countries, it becomes clear that most of it is dedicated to defending borders. Today, the cost of maintaining nuclear bombs alone could cover the livelihood of the entire (perhaps much more) of the world's population.

With all the discoveries and the stabilization of the space station, humans have still not been able to solve their livelihood problem, so that sustenance and livelihood surround all their thoughts. Just like animals, when they wake up, they run to get enough water and food. The current human population on Earth is about eight billion people, and food is available for more than twenty billion. However, it can be said that all people are concerned about their livelihood.

Humans must free themselves from the worry of making a living and plan and work hard to create a secure future, otherwise, with the collapse of the Earth (when it leaves its current orbit), all its creatures will become extinct without exception. That is, the people of the Earth must spend a percentage of the planet's budget to provide for the livelihood of all creatures and the rest on space exploration, because every moment that passes brings us closer to the end of life on Earth. The Earth is inhabited by living beings who live without will (under the laws of nature), not beings who violate the laws of nature, break the wall of the Earth and discover and create everything. Regarding existing borders, we must know that these borders are not man's invention, but man's imitation of wildlife.

The existence of all these borders and countries is due to the sense of human competition. The people of the world compete with each other in various ways, so that in the not so distant past, these competitions were very hostile. Humans brutally killed, plundered and enslaved each other until they were able to interact with each other a little in the Middle Ages. After that, the competitions were

transferred to arenas such as stadiums, etc. and people were selected to compete hand-to-hand with each other or with predatory animals. And thus a deadly battle between gladiators was created and organized. Then the brutal and deadly fights of gladiators gradually turned into the fun and childish games of today.

Today, if countries are at odds or hostile to each other, the competition between their peoples will be very hostile. For example, they will first impose sanctions or threaten each other, and if neither side leaves the conflict, they will attack and destroy cities and kill or capture as many people as possible. In some cases, military aggression can last for years, such as the eight-year war between Iraq and Iran, which killed, injured, and maimed millions of people in both countries. Some wars become world wars, such that in World War II alone, the number of deaths is estimated at more than eighty million, while it is impossible to estimate its economic losses, because during the six-year war, most cities were destroyed.

But in times of peace, the people of the world compete peacefully. In a way that nations compete with each other by raising the colorful flags of their countries. The number of games is countless and the most common games are played with a ball (rubber ball, etc.). For example, football, basketball, handball, baseball, tennis, golf, billiards, marbles and the like. If there is someone who can name all the existing games and explain how to play them, I will be his servant, because the number of games is so large and diverse that only in the world of illusion (the world of letters) can they all be counted and described. Today, if an extraterrestrial being lands on Earth and observes the diversity of our games, he will immediately contact his fellow human beings and introduce us as the creator (God), because only God can create so many games.

Each country first holds domestic competitions among its people, and after domestic competitions, the people of the countries go to international competitions. International competitions are diverse, so that some games are held annually and some every few years. For example, football competitions are held every year between European, Asian, American and African countries, but the World Cup is held every four years. In order to participate in international competitions,

the people of the countries must win national competitions so that they can join the national team and participate in world competitions. One of the most important world competitions is the Olympic Games, in which almost all countries participate and which last for several weeks. The Olympic Games are summer and winter, each of which is held every four years with an interval of two years. In the Winter Olympic Games, competitions take place on ice and snow. For this reason, it is held in cold countries and few people from tropical regions participate, but the Summer Olympics cover almost all countries. In addition, there are also the Paralympic Games, which are held simultaneously with the Olympics (immediately) and people with physical and mental disabilities participate in its competitions. Some matches are held in stadiums with more than a hundred thousand spectators and hundreds of millions of television viewers. People who are at work or do not have access to a television follow the games by listening to the radio. The point is that today almost everyone is entertained by games in some way. For example, some are actors themselves, others organize games, and still others entertain themselves by supporting the players.

God has given us all these games and entertainment. Because books have guaranteed us the paradise of the hereafter, we can spend these few decades of life on earth playing and having fun and then enter the eternal paradise. So we, the faithful and God-fearing people, are the happiest and most blessed beings in this world, because in this world we live with all kinds of drugs, intoxicating drinks and fun games and after death (the Day of Judgment) we will enjoy eternal pleasures. Of course, if our God (books) is real and powerful. We humans, with faith and trust in the God of books, started entertaining ourselves and until today we have always sought to create new games for more entertainment. If we continue with the current lifestyle, which is simply entertainment and wasting time, it will not be long before the limitless abundance of population causes us to waste the earth's resources and reach a dead end.

We live in an age of rationalism and futurism. Therefore, a cursory

glance at the content of religious books proves that all of them lack heavenly sciences and there is no God called the God of Books. Unfortunately, today no one has a problem with the ignorance and lack of knowledge of the author (of religious books) and the majority of people are looking for the promised paradise and using the science of the day to create new entertainment. I hope this book will be effective in enlightening, (injecting sparks into the brains), preventing waste of time and preserving the resources of the earth. Otherwise, all the resources and facilities of the planet Earth will be spent on entertainment.

We who consider ourselves modern humans. Regardless of the future of our children, we spend all the resources of the earth on sensual things, because God (the books) is omnipotent and determines the future for us. For this reason, we are exempt from creating the future and can use the resources of the earth as we wish, that is, produce weapons of mass destruction, degrade our brains to the level of animals with drugs and alcohol, and spend the rest on games and entertainment. The resources of the earth must be used in some way to obtain more resources so that we can find new homes in star systems to move to. Unlike today, when we rely on nonsense such as eternal life in the heaven of books and... all the resources of the earth are spent on games and entertainment. Our ancestors, who believed in the promised paradise of the books, if they had access to technology like us, we would not exist today and if we were alive, there would not even be grass to eat and we would have to eat dust. Considering the above, our (future) descendants will be very desperate, a terrible and poor future that is the legacy of our incompetence, because we have chosen a paradise for our future and our children whose creator is so childish and despicable that he does not even understand the position of the moon and considers the galactic movement of the sun to be equal to the rotation of the moon. To see the correspondence between the movement of the sun and the rotation of the moon, refer to verses 33 Al-Anbiya, 29 Luqman, 5 Az-Zumar, 13 Fatir, 2 Al-Ra'd, 96 Al-An'am, 5 Al-Rahman, 12 Al-Nahl, 37 Fussilat, 29 Al-Ankabut, 5 Yunus and 40 of Surah Yas.

If life continues as it is now, recreational facilities such as stadiums and the like will need to expand in line with population growth. There are now several stadiums in countries with a capacity of over one hundred thousand people. The current population growth is irregular, and if it continues for a few centuries, the number of people on earth will exceed twenty billion. Given the increase in population, the capacity of venues for holding matches (stadiums) must also be increased. Consequently, stadiums with a capacity of millions must be built, but when the population exceeds twenty billion, there will be no more space left to build stadiums and we must create underground recreational spaces, such as the indoor stadiums that exist now. Since the surface of the earth does not have a capacity for more than twenty billion people, some groups (the population above twenty billion) must live in an underground city.

Modern management does not need population growth. Because it has no plan to create an ideal future. Today, when the majority of people have chosen the promised paradise of books as a secure future, no one cares about uncontrolled population growth and its consequences. The consequences of rapid and excessive population growth disrupt the systems and economies of all countries, as poor countries that experience excessive population growth face unemployment and poverty, and people are forced to migrate to richer countries to receive more and better opportunities. In view of the above, excessive population growth is a warning to future generations.

Man increases the number of people to advance his goals, but the current man has no goal other than destruction (i.e., dying and entering the paradise of the books). However, population growth is very rapid and irregular. If the future is ignored and serious planning is not made to create it, we will all melt with the earth in the fire of the sun, just like creatures living under the laws of nature.

From the moment we realized our perceptual power and were able to understand the surrounding environment, we started thinking about the future and from time to time we are sure that we have

a bright future. For example, in ancient times we were looking for a bright future by worshiping the sun, moon, fire and idols. Today, by prostrating and worshipping this God (Books), we believe and are certain in a very bright future, because He (God) has prepared an eternal paradise for us in the hereafter. Today, we bow down to the God of Books, because He is the only savior we know and without His promised paradise, we have absolutely no future. We humans, from the beginning of our lives, have never thought about building a secure future for ourselves, because instead of building a future, we always build gods and God has been and is our only future. Since building a future requires effort and perseverance, man makes comfort his profession and chooses God as a secure future.

Keep in mind that the creation of the present God (the Book) has many benefits and virtues. For example, the afterlife comfort in heaven, which gives us the opportunity to spend the moments of worldly life on earth with exciting entertainment and eagerly welcome death. Because we believe and are sure that after death in another world, a carefree and eternal life awaits us. This action of ours (belief in heaven, etc.) causes us to spend all the earth's resources on our own entertainment and fun. Therefore, every day that passes, we are getting closer to the collapse of the earth, because in addition to the surface of the earth, we have also dedicated the surface of the waters to games and entertainment, and it will not be long before we dedicate the underground and even underwater to games. Why not? We have complete faith in God and His promised paradise. Therefore, we must entertain ourselves as much as possible so that we can endure and complete our few decades of life on earth and be patient and tolerant in order to reach heaven.

It can be said that it is impossible for us to create a secure future because we have complete trust and confidence in God and the imaginary paradise of books. Therefore, the God of books cannot be eliminated overnight and the future structure designed because the majority of people live by relying on this God. Consequently, the words of the prophets about the structure of the world must be clarified with long-term planning so that we can prove the non

-existence of the God of books. Because the God of books has been in the hearts of people for thousands of years and the vast majority live in love with his promised paradise.
We, the modern humans who do not have the skills and ability to build the future, if we did not have this God in our minds, would commit suicide out of fear of an uncertain future, because without the promised paradise in the hereafter, life on earth would be very unpleasant. In the beginning of our thinking, when we thought about creating the future, if we had not immersed ourselves in illusions and instead of building a god, we had rolled up our sleeves and planned to build a secure future, now we would have several stars under our control and dozens of habitable planets under our feet. But unfortunately, we made mistakes and continue to drown in our mistakes in such a way that we are not even willing to accept our mistakes, because we neither have the patience to build the future nor can we continue to live without considering the promised paradise. Therefore, we are delusional and God-fearing beings who are rushing towards the abyss (destruction), and if we cannot get rid of illusions such as God, heaven, etc., we will soon fall into the flames of the sun on this blind path.
In today's modern world, if not all people are educated, then ninety percent are able to read. Therefore, with a cursory glance at the text of religious books, everyone understands that this God does not exist externally and the promised paradise is nothing more than an illusion. In view of the above, the God of books must be included like idols at some point in history. If the nature of the God of books is revealed to the public and the proof of its subjective existence is sealed at some stage in history, an opportunity will be provided to create paradise (the ideal environment for man). Most importantly, man must be aware of his abilities. Today's people, who, with all their hatred and aggression against each other, deploy huge ships in space and build floating skyscrapers on the water, if they achieve true unity, they will achieve all their dreams and ambitions. But if human unity is not achieved and this hostility and separatism continues, we will soon reach the stage of using nuclear weapons and with nuclear war all the resources

and facilities of the planet will be destroyed. After that, the few survivors of the nuclear war will struggle just to survive, because after a new nuclear war, life on Earth will become almost impossible. So, we must pass this stage (God, the prophets and the promised paradise) as soon as possible and plant the nucleus of human unity throughout the world. If the seed of unity is planted today, it will take years to grow and bring us to true unity. Therefore, we must remove the illusions from our minds as soon as possible and plant the seed of unity so that we can leave the Earth hand in hand and enter other parts of the galaxy to achieve our goals. Currently, traveling to another star system is very difficult, because there are problems such as low speed, lack of energy, hard rocks like diamonds, etc., but all these problems can be solved with unity and cooperation. To move towards the goals, we must first increase the speed. Because with the current speed, we do not even have a chance to fly to the planet Neptune, because Neptune is about four billion kilometers away from Earth and the speed of the current manned spacecraft is about ten thousand kilometers per hour. Therefore, to fly to the planets of this system, we must increase the speed and then explore and plan ways to travel to other star systems in our galaxy.

To enter the universe (the points of the universe), we need the speed of light, but unfortunately, it is currently considered impossible to achieve the speed of light in human societies. If we realize the capabilities of human unity, we will not only reach the speed of light, but we will move faster than it. For example, over the past two hundred years, with all the hostility and destruction of facilities caused by stupidity (autocracies and wars), thousands of kilometers have been added to the speeds. Less than two centuries ago, the fastest speed we could travel with fast horses was only 40 kilometers per hour. Today, after two hundred years, we move at a speed of thousands of kilometers per hour. Therefore, reaching the speed of light is possible, it only requires the unity and companionship of all people.

After securing our livelihood and environmental security, we, the people, took action to build the future. In the thousands of years

we have been building the future, we have never made progress and are always stuck at a stage where we want to reach the promised paradise by worshipping the God of books.
As the evidence and arguments in this book make clear, man invented the God of books. We created God, and this imaginary God created a paradise for our future. Note that we are not primitive humans who do not have armed eyes and infer the Earth as the entire universe, but we are those that depict galaxies and suggest parallel universes. Therefore, we must be forward-looking and plan to create a bright and secure future. Not like today, when we wait for our death so that destruction and nothingness will lead us to eternal life in an imaginary paradise.
The present period is the most fruitful stage of human life on Earth, because we are using all the possibilities of the Earth and observing the world around us with armed eyes. Therefore, if we can unite at the earliest opportunity and plan and work to build the future, our actions will be fruitful and we can travel to neighboring planets to obtain the necessary tools and then examine the plans for flights to star systems, but if we do not act quickly, with the hatred and hostility that exist today, we will inevitably go to war with each other and destroy the Earth's resources. And after the destruction of the Earth's resources, we humans (the only sentient beings in this world) will also become extinct along with the animals.
We humans are sentient beings who, with the help of our perceptual abilities, have a high capacity for creation and destruction. Of course, our destructive power is much stronger now, so much so that we can completely destroy life on Earth, but our constructive power is so weak that we cannot even build a secure future for ourselves. We have neither an idea of the future nor the patience to build it. As a result, instead of building the future, we build God because building the future requires supernatural brains and unity.
The God we live in hope of His promised paradise, was created in ancient times by those who did not even have armed eyes and considered the surface of the Earth to be the entire universe. Today, spacecraft have been sent to the edge of the galaxy and plans are

underway for man to fly to Mars. Yet the same God created by primitive man (with unarmed eyes) is worshipped. A God who does not understand the truth of the rotation of the Earth, because he was created in the Stone Age.

We, who consider ourselves the only perceptive and creative beings on earth, must return to our powers of understanding and insight so that we can put aside this imaginary and insignificant god and create a secure future for ourselves. The future we now hope for is nothing more than an illusion, because the creator of that future (heaven) is a mythical being created in the mind of primitive man. We live in the age of counting galaxies, so we must know that if the God of Books existed, at least some trace of him would be found in the universe or a sentence about one of the galaxies would be written in books. As you know, there is no trace of the God of Books in our world and no correct statement of the structure of the universe can be found in the text of books. Nevertheless, more than seven billion people today have complete faith in Him and His prophets, even sacrificing their lives for the love of His promised paradise.

After entering the scene of life on earth, man chose and worshipped many gods such as the sun, the moon, fire and idols. After that, from time to time he realized the nature of God and, realizing his mistake, he rejected the imaginary gods one after another and continued on his way, but after choosing the God of books, he stopped due to not realizing his mistake (trusting in an imaginary god). Now, after thousands of years and the proof that the text of the books is not heavenly, the God of books is still worshipped as a savior and giver of heaven.

Today, it is heard that some countries intend to travel to Mars and will travel to Mars in the year 2030 with a ten-year plan. The distance between Mars and Earth is about fifty million kilometers, while Neptune is more than four billion kilometers away from us. We (the majority) of today's people, who live in the hope of settling in the promised paradise of books, may be able to travel to Mars with a ten-year plan, but we cannot even plan to travel to Neptune. Because our speed is very low, the four-billion-kilometer flight

of a manned spacecraft is not included in our plans. Of course, if we can remove the imaginary paradise from our minds and society by understanding the essence of the God of Books, we will definitely move faster than light with true unity. Hoping for unity and harmony among all that will bring all of humanity's dreams and aspirations.

Man is a gifted, inventive, and creative being. Consequently, a being who has the power to create does not need God, but the lack of a secure future forces him to create a God so that this imaginary God can grant him eternal life in heaven. Just like today, people have nothing but the heaven promised in books for the future and spend decades of their lives on earth having fun in order to reach a carefree and eternal life in heaven after death.

I have lived for about seventy years and I hope that the future will change soon so that I can witness the transition of man from the age of the God of Books and then experience the unity of mankind to depart for other parts of the galaxy. Note that we call ourselves modern humans, while our only future (heaven) was built by the Stone Age humans. When it comes to building a secure future, we God-fearing people are so helpless that we do not even have the power to imagine it. We devote all our talent and effort to creating entertainment because we believe in the God of Books and his promised heaven, and this dilemma (believing in nonsense) makes it impossible for us to build a future.

To build a secure future and advance goals (invent new goals), we must return to our human nature of deliberation so that we can use our unique and diverse brains to prevent the illusory paradise of books from becoming a haven for the future. If the Quranic Day of Judgment and Paradise were real, it would have to have a different address than the Earth, because the Earth cannot hold hundreds of billions of people. In all ages, most people live less than a hundred years. Therefore, every hundred years, eight billion people are added to the number of people on Earth. In the Quranic Day of Judgment, when all the dead are resurrected (from their graves), the righteous are rewarded with Paradise and the wicked

are punished for their deeds, the Earth must have a capacity for trillions of people. Of course, when the Earth is flat and boundless, anything is possible.
With the complete trust of the majority of people today in books and the resurrection, can it be proven that there is no heaven? In the current situation, the only way to prove the non-existence of heaven is to carefully study religious books. Of course, the study must be free from any prejudice, that is, before reading or listening, one should not believe in the content of the book. Unfortunately, today, most people believe in religious books before reading them and are 100% sure that the texts of the books were revealed from heaven. For this reason, the ways to prove the non-existence of heaven are blocked. Therefore, with the arguments of this book, I try to open a way so that we can say that the promised heaven of books is definitely an illusion.
When people inherit beliefs, they have nothing but the illusory paradise of books for their future and are condemned to choose that horrible future (burning in the flames of the sun). Today, when most people are born believing in the God of books, if a cursory glance is taken at the books, not a single Jew, Christian or Muslim can be found in the entire world. This is because the writers of the books have no knowledge of the origin and structure of the world, so that not even a single correct word about the structure of the world can be found in the books. Of course, if the justifying people (explanation on page 48) do not interpret the rotation of night, day, sun and moon (the error of the earthly observer) as the orbits of the heavenly bodies and the galactic movement of the sun. Considering that thousands of years have passed since the publication of religious books and not even a hundred years have passed since man entered the scene of the universe and the atom, it can be said with certainty that all the contents of religious books were handwritten by primitive people and no supernatural forces were involved in them. If religious books were divine and revealed from heaven, there would be at least one correct sentence about the order of the universe in their text.
The obsolete books of religions that have ruled over people for

thousands of years and are still accepted by the majority as the word of God are the result of religious leaders abusing their power to condemn critics to death. For example, one Christian leader (Pope Clement VIII) condemned Giordano Bruno to death for doubting the word of God and burned him alive in Rome. Giordano Bruno was burned alive on the orders of religious leaders in 1600 AD and he was not the last to be killed in such a horrific way, as Islamic leaders continue to publicly execute critics and opponents of these books.

In Christian societies, the power of religious leaders has been reduced to the point where they are no longer able to sentence people to death and burn them alive, but Islamic leaders still sit in power and punish opponents by flogging, beheading, and hanging them in public (creating terror) in order to rule over all people within their borders.

Humans at all stages of life have inferences and ideas about the world around them, but they are never certain of anything, because they add to their discoveries and knowledge every moment and change their thoughts and beliefs. But when illusions such as God and heaven or the like are revealed, humans are certain of everything. Like the texts of religious books, which the majority of people have complete faith and confidence in their divine revelation. The main reason for the majority of people's misguidance is that some unscrupulous and tyrannical people introduce themselves as prophets and claim a relationship with God. After the desperate people believed in the prophet, all the stories were the clear and obvious words of God that were revealed to the prophet by an angel from heaven. When an arrogant and cunning man imposed on others that God was speaking to him, all people must have complete faith and trust in his prophecy and words, otherwise they will be killed as atheists and corrupters on earth.

As stated in the clear text of the scriptures, God is omnipotent. So, why did this all-powerful God not have the power to communicate directly with His servants? God first gave His message (revelation) to an angel and told him to give it to an intermediary (prophet) and then the intermediary revealed the revelation to the people.

When the Creator wanted to send a message to His servants, He first called an angel and ordered him to secretly give the message to the prophet and then the prophet would convey that message to the people. I really don't know how and where to put this God in my mind. A God who is so bureaucratic in delivering the message to His servants would give the message to an angel and the angel would have to give it to the prophet and then the prophet would have to go to the people and say that God has revealed this message. Basically, there is no need for a prophet. Because when a Creator creates elements or individuals, He is aware of all their movements and thoughts. That is, God is aware of all the thoughts and actions of His servants at every moment of life. So why does the God of the books, who is called the Almighty, give people messages through the Prophet about what to do and what not to do for their happiness in the hereafter?

Given that God Almighty is aware of the actions of all servants from birth to death, if He sends a prophet to guide people to tell them what behavior and speech they should have, the story of such a creation system must have been published in the Stone Age. Because the Creator does not send messages to His creatures, but rather places all the actions they must perform throughout their lives in the brains of each one of them.

The God-fearing believe that if they act contrary to what is written in the books, God will send them to hell, and these prostrate believers will never believe that God has programmed this sin (disobedience) into their brains. The point is that people do not know or do not accept that the main culprit is God who has designed the violation of norms in the brains of his servants. If God is omnipotent and aware of the actions of creatures, what people do is from God. And if God is not aware of the actions of His servants, He cannot be God. Because God must know the number of atoms that make up the cells of our bodies and even the number of spins of each electron. Despite this fact, the Prophet sends a message from God that people must strive in the way of God and pray, otherwise they will be punished for their disobedience in hell.

The aforementioned God (the holy books that do not understand

the rotation of the earth) is worshipped by humans living in the age of technology and galaxies. Currently, a small number of people in society consider the books and the promised paradise as baseless and try to create a secure future, but the overwhelming majority choose an imaginary paradise for their future and instead of planning and trying to build the future, they appeal to the God of Books.

When humans create a robot, they know exactly all the functions and details of its movements. A robot can never disobey the orders of its creator (human). In the future, when robots do most of the physical work for humans, if the creator(the monitor) wants to send a message to his robots, he will not choose a robot as a messenger (guide) to guide the other robots, but by pressing a button, he will send his message to all the robots. Therefore, if there is a God, he will never choose a messenger to guide his servants, because the Creator is aware of all the thoughts and actions of his creatures in advance, just as humans are aware of the actions of their robots. Therefore, the existence of a God who sends a message to his creatures and the creatures disobeys it is a complete lie. For example, the God of the books gives Paradise to Adam and Eve and orders them not to eat apples or similar, but they disobey God's command and eat apples, and God expels them from Paradise. What is this God of the books that more than seven billion people live just to reach his promised Paradise? If he knew that Adam and Eve would eat apples, why did he order them not to eat apples? Furthermore, if God does not know whether his servants will eat apples or not, he cannot be God because God (i.e. the one who created the universe) is omnipotent.

God programs in the minds of His servants to eat the apple and then orders them not to eat the apple. What creatures can worship such a god and prostrate themselves to him thirty-four times a day? Undoubtedly, the same people who in ancient times made idols and slit the throats of their dearest children for handmade idols, today call idols prophets and sacrifice humanity along with all the creatures of the earth for their prophets. Prophets who did not even understand the position of the earth and were buried

before they discovered the hidden secret of the earth's rotation, while today's ten-year-old children have the secret of the earth's rotation in their past.

The theistic front justifies that God's purpose in forbidding the apple was a divine test, that is, God is testing humans. The God who created the galaxies of the universe, galaxies that after fourteen billion years continue to bring into the world beings with extraordinary arrangements and give life and residence to each of them. Despite this, those waiting for heaven ignore God's omnipotence and justify and argue that God does not know whether Adam and Eve eats the apple or not.

In ancient times, some people wrote stories and said that an angel revealed this story to us from God. People at that time necessarily accepted the stories as divine revelation, because they had nothing but fear of the future and knew absolutely nothing about the structure of the world.

The story of the Torah: God created the sun, the moon, and all the stars on the fourth day. God, who created the universe with more than two trillion galaxies, must have forgotten the foundation of creation when sending revelation to his prophet. Because to create night and day, he must first create a galaxy in which stars are born and form systems, then create planet Earth in the solar system and provide day and night to its creatures with its axial rotation. Moreover, without the formation of galaxies, there would be no stars to form day and night on their planets. If the God of the books were real, he would at least have revealed the secret of life on earth to his prophets in the simplest way. And the Torah's creation story, instead of the creation of the sun, moon, and stars on the fourth day, would have been written like this: "God created safe and stable homes (galaxies) for the birth of the stars, and the stars formed families that give life and residence to their members (planets), including the Earth." The sun's fixed home is in the Milky Way galaxy, and this galaxy protects the solar family of which we are a member. If the sun's home were not within the fence of the galaxy, it would not survive even a minute.

The story of the Quran: The Quran states that the sun does not

reach the moon, and the night does not precede the day, and each one floats in a certain orbit. Primitive man created his own story and presented it to society as a divine revelation, and people believed in its truth. Considering the current knowledge of mankind, it is unfortunate that the majority of them accept the texts of religious books as the word of God and have complete confidence in the existence of the God of the prophets. While the books do not even have a correct sentence about the position of a cosmic body such as the moon, the sun, or the like, because they are all the handwritings of primitive people, characters who did not even have armed eyes to observe cosmic bodies. Modern man, who, after evaluating galaxies, proposes parallel worlds, fully believes in the God of books. We do not need to have God (books), because he is an illusion left over from the Stone Age and does not even have a correct sentence about the structure of the world. If we cannot stop this malice and vindictiveness and plan a secure future together, we must create a God who will give us peace and comfort so that we do not commit suicide. Of course, a God who reveals the secret of the formation of galaxies, unlike the God of books who did not even have the power to understand and reveal the secret of the Earth's rotation.

At present, the beliefs of most people (God, prophets and books) are hereditary, and a few consider the texts of the books as obsolete stories and legends and deny their heavenly basis without studying them. The aforementioned people do not even have the patience to superficially examine the books and justify their lack of reading by stating that they are not worth reading. Therefore, in this book, I present the opinions and statements of the authors of religious books regarding the structure of existence. Every text of the religious books in this book is in accordance with the original and word for word, and anyone can refer to the original verses in the books for certainty.

The Quran is written in Arabic and anyone can translate and interpret it as they wish. For this reason, I have consulted several languages to find the correct text and have included the author's intention in this book as much as possible, and the subtitles are my personal

opinions.
I hope this book will be effective in uniting the people of the earth and breaking the objective and mental boundaries. To pass the stage of the God of the Books, we must first break all the boundaries drawn in the minds, the boundaries created by the multitude of prophets of the God of the Books. Since every religion or sect has its own prophet, we should not be hostile and fight with each other for the prophets, because their god does not exist externally. If there really was a God, He would not need an intermediary(prophet) to communicate and deliver the message to people, because God is omnipotent and can deliver His message to each and every one of His creatures. Moreover, if He wanted to choose a messenger, unlike this obsolete God who has more than a hundred thousand prophets, He would have had a messenger on earth to deliver His messages to people. The statement that God tests people in this world and grants them the promised paradise on the Day of Judgment or punishes them in hell is nothing more than nonsense. Because God is aware of everything, that is, He is fully aware of all the thoughts, words and deeds of His servants. So, God is aware of what people will do in the future.
Man is a gifted, inventive and creative being. Therefore, a perfect man cannot hate himself, let alone commit suicide. All people are the levers for moving the ship towards the goals. Therefore, if someone is killed, the speed of the ship decreases. Whether that person is killed or commits suicide, both are murders because they decrease the speed of the ship. As a result, the most urgent need of the world community is perfect people (i.e. people who understand and use the transcendental brain), not people with titles such as president, leader, etc. who stand behind the podiums and incite and encourage people to kill by spreading hatred in the society. Unfortunately, in today's society, the majority of people only accept those around them, such as family members, relatives, friends, colleagues, fellow believers, and compatriots, as trustworthy people, and this problem causes some people to consider themselves special and superior to others. When a person is delusional and considers himself superior to others, he never strives for human

unity and creating a secure future, because he considers himself a supernatural being and spends all his efforts on propaganda to gain the trust of those around him. After gaining trust, he creates a God who is not omnipotent, meaning he does not have the power to communicate directly with his creatures and must choose someone as a prophet to communicate with people. After that, God chooses him as a prophet, and the result is that the fate (future) of today's man (explorers of the universe) is determined by nature. Exactly like animals who live under the laws of nature and have no control over their fate at all. The life of modern man is inferior to the life of animals, because animals live under the laws of nature, have no goal other than to be saturated for survival and are alien to the future. Therefore, they live better than humans because they do not fear the resurrection (unknown future) and, unlike humans, sleep carefree at night and immerse themselves in joyful dreams. While humans are not free from the illusion of an unknown future even for a moment. Among the eight billion people living on the planet, who cares about their future? Honestly, there is not a single one. Because the majority believe in the promised paradise and the few who try to create a secure future are crushed under the roller of society's ignorance (petrification). We live in an age when many of the wonders of the universe, such as a star being swallowed by a black hole or two galaxies colliding, are not unusual events. Although we call ourselves modern people, we worship a God of an age who could never reveal the secret of the structure of the universe. A God who did not even understand the position of the earth, because the secret of the earth's rotation was never revealed to his prophets. He (God) is the one who reduces the greatness of the sun to the level of the moon.

“There's nothing wrong with youth being ambitious”
I'm very ambitious in my dreams, like creating my own galaxies, but as a realist, right now, leaving Earth to settle in an extrasolar star system is my ultimate dream!

Money

A person should not worry about his livelihood, otherwise the brain will be distracted from its institutional activity. In other words, hungry people, like animals, only think about filling their stomachs. All living beings use their natural and limited intelligence to saturate, but humans, in addition to natural intelligence, have a mysterious and supernatural brain that they use to study the world around them. Living beings that live under the laws of nature have only one goal, and that is to saturate, therefore, the goal of human life on Earth is not only saturate for survival, but also to evolve and create an ideal world. As mentioned earlier, it took more than a hundred thousand years for humans to become familiar with their metaphysical brain and, using only one percent of their brain capacity, conquer the Earth with its resources and living beings. Now, after tens of thousands of years of living on Earth, humans in their current state, like other living beings, run for a piece of bread to maintain their survival. The reason for man's alienation from his exceptional brain was hunger, because early in life, animals dominated man, and hunger caused man to live involuntarily and under the laws of nature for more than one hundred and fifty thousand years.

Humans have supernatural brains, but they can only communicate with the supernatural part of the brain when they are not concerned with livelihood. Therefore, people who are concerned with livelihood are not extraterrestrial brains, because a hungry body is alien to an extraterrestrial brain, and natural intelligence is not capable of providing sustenance that can communicate with its extraterrestrial brain. It can be said that all people on earth are concerned with their sustenance, so practically everything they do is in line with daily food. Consequently, we are the same creatures who in the distant past walked on all fours without any connection with the brain and under the domination of predatory animals.

All living creatures are born with their natural and limited intelligence,

and humans are the only creature that has supreme and infinite intelligence.

In ancient times, some people hoarded food, but storing food was not an easy task, because it required large warehouses, guards, etc., and in addition, the warehouses (stocks) were exposed to public view and the hoarders were identified by the people. Until monopoly came up with a solution and turned food into money, and now they easily hoard money in very large amounts. Today, one person hides the livelihoods of billions of people in his secret coffers (funds, banks, etc.). Currently, an adult human usually needs one kilogram of food per day, and it costs about twenty dollars ($). Therefore, a billionaire with only one hundred and sixty billion has hidden in his warehouses the food of all the people in the world. However, the human world (planet Earth) has hundreds of billionaires. People who are called billionaires boast about their wealth (hoarding), roam everywhere and are respected and encouraged, while blocking the path of progress (evolution) of humanity. Because each of them has monopolized the livelihood of tens of millions of people and has caused livelihood alone to surround all the brains.

The existence of a group of brain-ant humans has made the vast majority of people worried about their livelihoods. Since ants naturally collect things and food, one gram of ant stores thousands of times its weight in its nest. Storage surrounds the entire brain of the ant and it involuntarily collects everything. If an ant is asked: Why do you store so much? There is no answer except that I don't know. Because ants are not even able to eat one thousandth of their reserves. However, they store to the extreme to pretend that they are wealthy. I should also add that in the life of all living beings on earth, there is a hidden point that humans use to achieve their goals. For example, the hidden point of excessive saving of ants is that the earth's resources are not eternal and will run out one day, and this is written in the ant's brain. The ant doesn't know that no matter how much it saves, it won't help much more than a few days, but a perfect human learns from the ant's life that in order to continue living, it must migrate as quickly as possible

from Earth.
Today, a billionaire considers himself to be a common sense person. Because currently, fame and popularity are only for food (money). While collecting money for a billionaire is just like an ant that has no plan for its unlimited savings and saves unintentionally. It can be said that it is only for gaining fame. One person has stored food for more than a hundred thousand years by hoarding only one billion dollars. Humans live about a hundred years, which means that a person with one billion keeps the food of more than a thousand people hidden in his safe for a lifetime. As you know, there are hundreds of billionaires in today's world and each of them has tens or even hundreds of billions of dollars in cash (in possession), and their total wealth can provide livelihood for tens of billions of people for a lifetime.
Why do billionaires save more than necessary? The human brain has countless spots, but when all the thoughts of a person are focused on one spot, the mass of the brain is minimized and the volume of the eyes increases. As a result, people with a one-spot brain see everything as money(food) and are attracted to it like ants. Among the living beings in today's world, billionaires are most concerned about their livelihood, because they cannot think of anything but money even for a moment and are always thinking about how to keep their accumulated money out of the sight and reach of others. If someone accidentally greets a billionaire, the billionaire says to himself: he must be greeting to borrow money, so he does not respond appropriately to the greeting. When a hungry person is satisfied, he lets his thoughts wander(beyond Physical desires),but billionaires are always thinking about accumulating more money and even in their sleep they think about how to keep the money hidden.
It should be noted that ants do not separate and hide each other's food for personal use, but these brain-microchip billionaires steal the bread of those around them and hide it in anonymous warehouses. Billionaires are the greedy creatures of our world, and by hiding people's bread, they bring themselves and all humans to the edge of the abyss, because the most basic need of man for existence

is food. That is, humans must have food for their lives in order to be able to set a goal or goals for themselves. I have entered the cycle of aging and in this long period of my life, I find the most difficult task to saturate the intestines, so that no matter how much I try and take care, I cannot provide my body with the healthy food it needs, even though I live in the most prosperous place on earth. That is, if I have trouble providing my body with the food it needs, no one on earth will be without problems.

The human body is not like a car that we fill up the tank and drive to the last drop of gasoline, gas, batteries, etc., we have about eight meters of intestines and these intestines must be saturated from birth to death. That is why a person should feed his body at least four times a day, for example, between seven and eight in the morning, eleven and twelve around noon, three and four in the afternoon and seven and eight in the evening. In addition, it is better to drink water half an hour before or one and two hours after each meal (about two liters per day). "I get out of bed around five and six and start the day with a glass of water and end it with a teaspoon of honey and half a glass of low-fat milk." Meals should be nutritious and consumed in an appropriate manner; specifically, each meal should weigh a maximum of 200 grams for men (excluding salads and side dishes) and 190 grams for women. If people are interested in bodybuilding, they can even double the number of daily meals—from four to eight—but the portion size for each meal, as mentioned above, is essential for every person.

I am not a doctor, but I know about prevention and everything I say is my experience. For example, if a person eats more than two hundred grams of food in one meal, the body's metabolism is disrupted. As a result, the liver does not have time to do its job and the body aches, starting from itching in the palms of the hands and soles of the feet, and if the person's brain does not understand the body's error, it is dragged to the doctor, medication, surgery, wheelchair, etc.

Until now, I have not heard or seen anything about proper nutrition (proper food intake), which is the most important criterion for health. Since doctors make a living from sick and suffering people,

they do not want people to be fit and pain-free. My profession for a living is clothing production and I can easily produce the toughest clothes, but preparing and cooking food is so difficult that sometimes I feel frustrated and helpless, because everyday food should be varied and contain essential vitamins. For example, if I eat red meat every day I will get gout, if I eat fish every day I will have a stroke, if I eat rice every day arsenic will cause my nails to crack, as well as other foods (be careful of ringing in the ears because tinnitus or similar are warning signs of a stroke). The tastiest and healthiest way to cook rice is to drain it. Since I haven't seen it anywhere else, I think only Iranians eat drained rice (maybe it's because draining rice takes a lot of time and effort). Recently, they boil rice in plastic bags in water (boil in bag) and cut one side of the bag and eat the rice inside. I've heard that plastic materials have been found in human blood. Well, this phenomenon is not surprising, when people cook and eat all kinds of foods in plastic in water at high temperatures, plastic materials should be found in the blood.

If we can understand the supernatural part of our brain and plan to create an ideal environment, first we must be able to keep the intestines full because it is not possible to saturate the intestines with the available foods, but by using the brain we can easily invent and produce the right food. For example, prehistoric man, who was facing the danger of extinction due to improper nutrition, was able to make bread using the brain 20 thousand years ago and save himself from the danger of nutritional extinction. Therefore, we can invent and produce bread that contains all the nutrients and vitamins, otherwise it is impossible to prepare nutritious food with essential vitamins for each human being. I live alone, but I cannot properly saturate my stomach because preparing healthy and nutritious food for at least four meals a day takes up almost all my time and energy. Since I suffer a lot to prepare and cook healthy food, having four slices of bread for my daily meal is one of my dreams.

I had no information about food before, meaning I didn't know what to eat and how to eat, and since I worked alone, I frequently

ate fast food (at least two meals a day), which is why I often had mild stomach aches and lived with painkillers until every night from 2:00 am to 5:00 am I felt a sharp pain in my lower abdomen. I called my doctor and the operator said: The doctor is on vacation, if you need it urgently, you can make an appointment with other doctors. I made an appointment with a female doctor. The female doctor asked, "What is your problem?" As soon as I said that I have a stomach ache after midnight. She picked up a pen and paper and started writing. I asked, "What are you writing?" She said, "Painkillers." I said, "You who prescribe medicine should know where my pain is coming from, stomach, intestines or somewhere else?" She said, "I don't know." I got angry and said, "You are writing a prescription for nothing, you are a doctor and I have come here to diagnose my illness, not to get a prescription for painkillers?" She told me, please go somewhere else. I told her, I am sick and I took the time to come here, now you are saying go somewhere else, you are a doctor and I am sick, tell me what is wrong with me or I will not go. She said, please go, maybe you have cancer, I told her, "You have to tell me to get lost so I can leave." She said again, "Please leave." If the doctor was a man, I wouldn't have let him go, but since it was a woman, I let her go.

A few days later, I went to see my doctor, Mr. Sjur Bakken. Like the previous doctor, he asked, what's wrong? As soon as I said stomach pain ... he started writing. I said don't write, I want to know where in my stomach it is sick. He immediately said, X-ray. I said yes. A day later, the X-ray letter came and it said, come early in the morning on an empty stomach. In short, the images they took showed that my colon had a six-millimeter ulcer. If I had accepted the doctor's prescription and taken painkillers, I would definitely have died because painkillers mask the pain, the ulcer would have grown and turned into a rupture and death. Now I know that stomach pain after midnight means that the colon is sick, but the doctor, who has spent years going to schools and learning lessons at the expense of society, does not know that stomach pain in the morning is a colon problem.

I don't think anyone really has the skill to inject the right foods into the body at the right times. Every type of food should be eaten at the right time. As you probably know, people over fifty who don't eat their food properly and on time suffer from joint pains such as knee pain, hand pain, back pain, etc. Some bodies, such as the elderly, are not susceptible to absorbing calcium because foods are not consumed on time. For example, milk and cheese, which are the main sources of calcium for the body, should not be eaten on an empty stomach in the morning because the body must have the necessary protein (every body should receive at least 50 and a maximum of 80 grams of protein daily) to absorb calcium, otherwise the joints will not absorb calcium. Note that meat is rich in protein and you cannot absorb calcium by eating (a two-hundred-gram serving) bread, potatoes, rice, spaghetti, or vegetables, which are sources of calories. Those who suffer from joint diseases such as knee osteoarthritis go to the pharmacy and buy ointments, knee braces, etc., without knowing that they need to adjust their diet. I was about fifty years old when I had knee pain and without any hesitation, I went to the doctor and took painkillers and ointments, but five years ago when I started having knee pain, I went to the pharmacy to buy ointments and knee braces. As I was putting my purchases in my bag, the pharmacy clerk said, "You should go get a photo taken. You might need surgery." When I got home, I was about to put ointment on my knee, but the clerk's words, such as taking a photo, surgery, etc., shook my brain. In short, I was lost in thought and said to myself, nothing hit my knee, so why does it hurt? I put the ointment aside and studied and researched about knee pain and finally realized that knee pain, wrist pain, back pain, shoulder pain, and elbow pain are all due to calcium deficiency in the joints.

A person must identify all the pains in his body, otherwise will develop chronic diseases. For example, when a person does not chew food well (even soft potatoes), a knot-like mass is formed in the intestine and prevents the exit of flatulence from the anus. As a result, flatulence penetrates the back of the neck and even the head, causing severe pain in the human muscles. Flatulence

usually resolves during the day, but on the day when you have not chewed food well, the flatulence does not resolve, and if you sleep without resolving the flatulence, the flatulence enters the back (below the waist, neck, even the forehead) during the night and causes inflammation and excruciating pain. In some cases, a person gets out of bed and cannot move his back or neck due to the severity of the pain. The pain of bloating that enters the muscles of the back and ... has no cure and you have to suffer until it is gradually relieved. Some resort to massage and some to dry cupping. Until the brain takes the seat of power, the body is in agony. Malnutrition or overeating is the main cause of pain in the body. That is, if there is a problem in any part of the body (from the soles of the feet to the head),it is caused by food. Therefore, every human being must eat at least eight hundred grams of nutritious food in four meals a day, otherwise he cannot be a being with a supernatural and creative brain. The human body is like a factory and the movement of the wheels of this magnificent factory requires four meals a day. Our intestines are between seven and nine meters long and when we swallow a bite of food, it takes about thirty-five to forty hours for all its nutrients to be absorbed and excreted. Therefore, if we eat unhealthy food, we absorb all its harmful substances.

I have died four times in my life, about five years ago I died for the fourth time and when I came back to life I found myself in outer space of galaxies, a space without movement, sound, objects and even existence. Since childhood I always asked people in my dreams for an address without an address, I just asked and no one knew the answer until four years ago I dreamed that my previous world was like a ball and had no secrets. As a result, the dream of asking that unknown address ended because I realized that every point on a ball (the Earth) is not much different from each other and if you draw a line or move from any point on it, you will reach the same point. For this reason, I do not want to be buried in this humble and insignificant world. When a sip of water takes an ant with it, the ant screams and says, the water is taking away the world. We modern people, like ants, consider the earth

as our world. I want to say that not even a galaxy can be the world of man because a galaxy is nothing more than a point compared to the real world. Man is a capable and free being, that is, he can comment on the origin of life (galaxies) or sleep on the bare ground next to a dog. By sleeping next to a dog, I mean this present life. Our life is no different from the life of animals, and perhaps even worse, because we have no future (for now, nature determines our fate), unity and healthy body. Today, although man must have a body without pain and a mind without any problems, otherwise he cannot call himself a man, most people struggle with diseases. To be healthy, we need to provide nutritious and healthy foods, and the planet has enough resources for at least twenty billion people. Yet, eight billion of us live with malnutrition worse than dogs. The only difference between us and dogs is that we have weapons of mass destruction and a false paradise after death. To live a purposeful life, humans must keep their intestines full or they will get sick. To saturate the intestines, we must eat a nutritious meal of two hundred grams every four hours so that the body can absorb the necessary substances. We must abandon this life (worse than animal life) and plan an ideal environment for our lives. As you know, man must first establish his life in order to set goals. Therefore, the food needed by every human being must be provided in every possible way. The question is, how? This question has only one answer and that is to change the system. The norm of the current system is like the law of the jungle and whoever has power eats others and this is worse than the jungle because man misuses his special intelligence and creates destructive weapons. If a nuclear war breaks out between the two current destructive superpowers (Russia and America), all resources and aspirations will be destroyed and the few who remain will say to themselves, how foolish we were to bring such a disaster upon ourselves. But grief and regret have no benefit and effect.

Today, anyone with power hides food (money) and exposes others to malnutrition, and with this greedy act, they are driving themselves and all of humanity to the abyss of destruction. All millionaires and billionaires are thieves, torturers, and criminals because they steal

and hide the food of others. They are like cancerous tumors in the body of planet Earth. As you probably know, there is currently no other cure than cutting or removing the cancerous tumor. Any type of pain (such as pain under torture) that occurs in the body without physical contact is caused by malnutrition. People who do not have a complete daily diet are tortured by billionaires because malnutrition makes them sick and painful. What kind of system is this that a criminal (billionaire) hides the food of millions of people in fireproof boxes and no one has the right to protest. This system is managed with very beautiful and appealing titles such as liberal democracy and ... The system that brought alcohol to the people's tables is liberal democracy. Currently, alcohol is the only substance that, due to its presence on people's tables and being woven into the fabric of the lives of the majority, disables the supernatural part of the brain and turns people into strange creatures (lower than animals). For example, the Pentagon (the great hunter) hunted the country of Iran by surrendering Mohammad Reza Shah in exchange for the throne, and the vultures (singers, actors, etc.) in order to gain wealth and fame had no hesitation in bringing alcoholic beverages to people's tables, spreading prostitution, pickpocketing, and the like, because wealth and fame had turned them into strange creatures. If the Shah's regime of selling honor had not fallen, the vultures of singers, actors, etc. would have legalized bawdry and prostitution in Iran. The aforementioned system is trying to bring drugs(such as alcohol) to people's tables, in a way that has made cannabis or hashish free and legal in some countries and cities.

The liberal democratic type of government means that anyone can open a shop and hire their wife and children as sex workers and provide sexual services(like the current brothels), there is nothing wrong with that, they just have to pay taxes. Worse still, anyone can open a shop(casino)and install a few gambling machines and empty people's food tables by robbing them. People who have inhumane and very ugly jobs, such as pimps (someone who runs a brothel), etc., the police must protect them and their shops according to the laws of society because they pay taxes. Unlike

other living beings, humans live in society and make laws to maintain balance in society. For example, according to current laws in today's societies, no one has the right to defecate openly in the streets, but in liberal democratic societies, anyone can open a shop to provide sexual services, gamble, sell counterfeit goods, and the like.

The basis of most systems in human life today is based on injustice and plunder, so that whoever has power takes the food (money, soul, and life) of others. When an individual hides millions of tons of food in his coffers (bank...) and tortures thousands of people (suffering and diseases caused by malnutrition), no one has the right to protest because the legislator is a plunderer. In the current system, anyone who picks pockets is arrested and punished, but when a billionaire steals the food of millions of people, not only is there no protest, but he is supported and trusted.

To have a sustainable and purposeful life, humans must meet three basic needs: food, clothing, and shelter. In the wild world, the strong live by plundering the weak, but a real human (a perceptive and creative being) never imitates the wild world. That is, all humans (everyone to the extent of their intelligence and ability) must work four hours a day. Of course, the work must be for the production of food, clothing, and shelter, not dirty work such as the production of alcohol, tobacco, drugs, counterfeit goods, and the like. Today, hundreds of millions of people make a living by producing and serving alcoholic beverages, tens of millions of people make a living by performing entertainment as sports, movie, theater, etc. stars, and all of them (the job of clowns is to entertain, and those who attract more people are real clowns, who in today's society are called stars of the world of music, sports, and movies) eat the proceeds of workers. In addition, tens of millions of people with the titles of Imam, priest, king, and sheikh do not work and eat the blood of people like leeches. This is not a humane society in which uninhibited individuals wear crowns or turbans and feed on the blood (income) of others instead of working and striving for a living.

With four hours of work a day, all the necessities of life are provided,

work means producing food, clothing and building materials, not that men put on ties and women put on makeup and go to work, so to speak. Everyone should have a profession (in the field of producing food, clothing or building materials) for their livelihood. If some people eat the achievements of others instead of working to produce the necessities of life, like the world of wildlife, others have to work a lot. As a result, some people get sick and lose their efficiency due to overwork and malnutrition, some become drug addicts, some become doctors, thieves, policemen, etc., none of whom participate in the production of the necessities of life. Four hours of work a day does not harm anyone, but rather makes people cheerful and healthy. Just as the human body needs four hours of sleep in a 24-hour period, it also needs four hours of work and physical activity.

We must change the existing system, which is an animal system, in order to stabilize life and advance our goals, otherwise, after eating and destroying the resources and possibilities of the planet Earth, we will be forced to feed on the soil. Refer to the knowledge of modern man (our brain) and see that the resources and life on Earth are not eternal and we must use the resources available in this house to search for houses with more and more sustainable resources. As mentioned earlier, man is a creature with a supernatural brain, but eight billion people do not like or do not want to have a supernatural brain in their heads and in any way, for example, taking various drugs, drinking alcohol, accepting heaven after death, etc., they put the supernatural brain in its place (i.e. returning to the brain that was dominated by animals thousands of years ago). People who drink alcohol become rabid and reckless creatures, those who use drugs become confused and sloppy creatures, and those who accept the promised paradise become beings who have no will or choice and live completely under the laws of nature, just like beings who are alien to the future and whose fate is determined by nature.

It seems that people who smoke are the worst of all because they cannot be talked to at all. If they are asked, why are you destroying your body? They often get angry and say, even if I have no food,

my cigarette must be ready, that is, cigarettes (which clearly destroy the body) are the most important need of life. Some people who talk about air pollution and the environment these days should pay attention to this point, as long as factories produce colorful cigarettes with cultivated tobacco and a part of society pollutes and destroys their bodies with the smoke of various cigarettes, there will be no way to create a healthy environment. Currently, a significant portion of people smoke, meaning they harm their bodies by inhaling smoke. Therefore, before we talk about air and environmental pollution, we should at least prevent smoke from entering our bodies. That is, stop growing tobacco and producing cigarettes. People who smoke, if you explain to them what diseases smoke causes in the body, they will authoritatively say, don't worry, this is my body and I want to destroy it, it has nothing to do with you. It is true that everyone's body is their own, but humans alone are the weakest living beings on this planet. For this reason, they must be numerous and united to stabilize their life and survival, otherwise they will become food for ants. Everyone's body is not just their own, but belongs to all humans. So if someone messes up their body and says it is their own, they cannot be human, because a real human would never allow their body to be harmed, let alone harm all of humanity by drinking alcohol, smoking cigarettes, etc.

The production of all these colorful cigarettes, alcoholic beverages, drugs, and the creation of millions of entertainment halls is just to waste or kill time, because today's man has no goal in life to spend time achieving, he simply lives. Just like other living beings who live involuntary lives and spend their post-saturation time with entertainment.

The above issue(money)clearly shows that all our diseases, sufferings and troubles are caused by the existence of a handful of so-called wealthy people such as millionaires and billionaires. Because they hide the food (money) of others and immerse most people in predicaments and diseases. So, what and where is the solution? Just as those in the distant past created money as a solution to hoarding food, we can eliminate money from the world. Certainly,

the first step to solving people's livelihood concerns is to eliminate money. If modern man could stop hoarding food and objects like ants and eliminate alcohol from his tables, he would easily eliminate money from his life. Because to save himself from an unknown and terrifying future, man needs to collect creative brains, not money (food). It is worth noting that if alcohol is not removed from the table, no problems will be solved, but rather barbarism will reach its peak and people will be enslaved by billionaires until all humans reach the abyss of destruction.

Money idiom:

"Money finds money and water finds the hole"

Today, a rich person can empty the pockets (food on the table) of the residents by installing several gambling machines in one place. So money must be removed from our world so that people with shrunken brains(millionaires and billionaires) cannot steal people's money and drown all of humanity in the worries of livelihood. Of course, removing money means removing the entire system such as banks, securities, etc.!

In the topic above, "Money," there is a section on human nutrition, which I will try to supplement by explaining my daily diet. (I never suggest what foods others should eat, because people's temperaments and tastes are different). I eat twenty-eight meals a week (four meals a day), and this number of meals is the minimum requirement of an adult human body. Of course, two hundred grams per meal, because more than two hundred grams is harmful. I am hungry most of the time, even after eating a meal, and this feeling of hunger after eating indicates a healthy body. I always crave food, but I eat according to a plan. This means that humans cannot eat enough food to be full like sheep, cows or donkeys, because humans eat to stay healthy, gain energy, and use it to achieve their goals, not like cows, sheep, etc., which eat only to get fat and obese.

Preparing and cooking four nutritious meals a day is not everyone's job because one must have access to food, be familiar with the foods, and know how to prepare (cook) them. In addition, we must know how to eat the food, otherwise, we will suffer complications. I suffered a lot until I managed to learn a little about a healthy lifestyle. Nowadays, there are dozens, maybe hundreds of types of drinks. I only drink half a glass of low-fat milk and about two liters of water a day. Since water is the lifeblood of a person, it should be drunk according to the daily schedule and not mixed with other things like flavors, colors, etc. that are harmful.

After the topic of water, we come to the topic of food, the preparation and proper administration of which is the most difficult task for a human being (that is, at present, absolutely nothing is more difficult than keeping the intestines full). I spent several years studying and experimenting with my weekly meal plan until I got a little closer to health.

My weekly menu consists of 28 meals:

Six servings of chicken(one chicken for six servings), four servings of eggs, seven servings of minced meat (five servings with potatoes and two servings with spaghetti), five servings of bread and cheese, four servings of fish, and two servings of broth. (The amount of meat I eat over the course of a week: 500g of minced meat, 600g

of chicken, 500g of fish, and 120 grams of red meat)
I cook chicken in water (on low heat for about four hours), make an omelet with eggs, onions, red bell peppers and a little spinach (about thirty grams). I learned a lot about cooking oils, it is this oil that makes most foods palatable to the human palate. In the past, influenced by advertising and observing people's purchases, I used to consume vegetable oils such as margarine and the like until I came to the conclusion through studies and experience that oils resistant to extreme heat are very harmful to the human body. Therefore, I tried several oils but my body did not accept any of them until I found dairy butter and I have been consuming it for more than a year, but not much (between ten and twenty grams per day). Butter is not heat-resistant, so when I have butter in the pan, I heat it to eight hundred (my stovetop temperature is from one hundred to fifteen hundred) and when the butter melts, I reduce the heat to three hundred, and also increase and decrease the heat carefully so that the butter does not burn while frying food.
Currently, the vast majority of people on the planet (due to laziness) consume very harmful oils and do not even realize that these oils are causing diseases in the body.
I fry eggs, fish and minced meat on low and high heat and boil potatoes. Now, I never eat food that I haven't prepared myself and wherever I go, I take my food with me in a glass container (food storage) that can be heated up to five hundred degrees in the oven. If I go somewhere where I can't take food with me or cook food there, I eat bread with cheese, walnuts and dates. (One of my dreams is to be able to eat bread and cheese at every meal because bread and cheese don't take up a person's time, but due to dementia, we can't eat it more than five times a week, and that necessarily with walnuts).
In childhood, when the brain is not yet fully developed, humans put everything they can get their hands on, even feces, in their mouths, just like we humans today put so many harmful foods and drinks in our mouths.
Those who use drugs, alcohol, cigarettes, or the like should know

that they are not beings with supernatural brains, because a human being would never harm himself.
I forgot to mention that I eat salad with my meals and never use sauces or anything with preservatives (I inevitably drink half a glass of milk a day and eat two hundred grams of cheese a week). I eat a banana, apple, orange, and carrot a day, and occasionally grapes, strawberries, blueberries and pomegranates. As for nuts, I consume about fifteen grams of almonds a day and fifteen walnuts a week. I also eat one or two raw carrots a day.
I must remind you that the human body is like a big factory and when we eat, all the wheels of this factory start moving. Therefore, it is better to plan our daily meals and eat according to the plan. People who are constantly eating, age and wear out faster.
A refrigerator can be compared to a body, if we constantly open and close the refrigerator door, we shorten its life. Although I try to reduce the number of times I eat per day, I eat eight to ten servings of food, fruit, and nuts a day. I also drink water six times a day!

Between a slow death of chronic pain and an acute, horrible death, without exaggeration, I would choose a horrible death.

Every living being that lives under the laws of nature must experience cruelty and oppression, because this is the cruel law of nature. For example, hyenas attack a cow and eat its hind legs, so that the cow cannot move and then they start eating its buttocks, stomach, etc. The cow moans and groans and cannot do anything except moan and has to suffer and wait for the hyenas to reach its head and die. Another example is humans (the so-called best of creatures on earth) who, when a cancer cell is formed in their body, it takes several years (sometimes ten years or more) to eat their body's nutrients and when, like a cow whose legs are eaten by hyenas, there is nothing they can do and they have to suffer until they die. Do you know what pain a cow must endure when hyenas paralyze its leg and then start eating its body? The pain a cow endures may be unimaginable to us, but the pain of being eaten by cancer cells is millions of times greater and worse than being eaten by hyenas because the cow does not suffer for more than a few minutes, but the pain of cancer lasts for years and in the last weeks of the disease, the pain is so severe that only an injection of morphine can relieve it a little.

The law of nature will kill the cow mercilessly, but for man (who, like animals, is subject to the laws of nature), it will bring trillions of times more suffering and torment, because a real man (one who understands and uses the supernatural part of the brain) never lives under the laws of nature, but rather violates the laws of nature and creates an ideal environment for his life. That is, nature is not able to dissolve man in itself like a dog or a stone, let alone create harmful bacteria, cancer cells, etc. in his body and drown

him in suffering and despair.

A note about bacteria: Since dogs have short intestines, their bacteria are so destructive that they can even crush and digest a swallowed stone. Therefore, if dog bacteria enter the human bloodstream, it can lead to death. For example, a person was running with his dog at night when he had an accident and his leg was injured (bleeding). As you probably know, dogs are kind and try to help. So, the dog licks its owner's wound, and the owner, oblivious to the consequences of his negligence, allows the dog to lick his wound. In short, the man goes home with his dog, and after applying permanganate and a bandage, he falls asleep, and the dog's bacteria that had entered his bloodstream eventually lead to his death.

For a human, everything should be in its place and in its position, that is, a dog cannot sit on a human's lap because it carries dangerous bacteria. Today, many people have pet dogs and without any concern, they put their babies in front of the dog and the dog licks the baby. When someone says that a dog is impure, they do not mean that the outer surface of its body is impure, but rather the purpose of calling a dog impure is the terrible bacteria that are present in its saliva. It can be said that out of the millions of people who have pet dogs, not even one person knows anything about dog bacteria. That is why they hug their dog and let it lick them.

Whenever I have pain in my body, I try to identify its source. For example, I explained earlier how I identified and treated my knee pain, which was due to calcium malabsorption. I used to get stomach cramps after eating food or fruit, and after a lot of observation and research, I finally found the source. The source of the cramps that cause the stomach contents to empty is harmful bacteria that enter the body through hot tap water. Even less than a drop can disrupt the entire body system. For example, sometimes I would

get cramps after eating an apple until I realized that the knife I used to peel the apple had been soaked in hot water (it had not been completely dried after washing) and the bacteria from the hot tap water had entered my body through the knife. (I used to peel apples, but I realized my mistake, as apple skin is rich in fiber.)

The bacteria in hot tap water are not compatible with the body, so I always rinse my body completely with cold water after a hot shower (even in winter). Note that if a bacteria from hot tap water enters the human brain, it will take twenty years or more to eat a gram of brain, but after eating a gram, it will eat a gram of brain per year. People with Alzheimer's have a harmful bacteria that has entered their brain through the nose or ear and has eaten a few grams of their brain after maybe fifty years. So be careful not to let hot tap water or stagnant water that you swim in enter your brain. As far as I know, bad or harmful bacteria do not like cold water and will run away from it.

I think I have experienced all the pains of the human body, but I have never complained and have always been looking for causes. The only pain I have not experienced so far is a toothache that I suffered from forty years ago due to a broken front tooth. Humans should not suffer pain, because they are perceptive and volitional beings. That is, a real human being would never swallow something that the body does not need. For example, among the current drinks, the human body only needs water and milk, and other drinks, if they are not harmful, are not useful either.

I will explain some of the pains that I have identified and treated: I have already explained the treatment of joint pain that is due to calcium malabsorption, and we should eat a teaspoon of honey with half a glass of low-fat milk at night before brushing our teeth. If you have joint pain such as wrist pain, knee pain, shoulder pain,

etc., by trying the above recipe, you can experience pain relief in less than a week.

I had been suffering from headaches for a while; after researching the issue for a few days, I realized I wasn't drinking enough water, and my headaches vanished completely once I started consuming about two liters a day. However, I later developed an even more severe headache, which worried me greatly since I couldn't immediately identify or treat the cause. Eventually, after a few days of suffering, I diagnosed and treated the problem: it turned out to be high blood sugar. I used to think only sweets raised blood sugar levels, but I later learned that low-fiber foods—such as pasta, rice, and the like—can also cause spikes. To prevent sudden blood sugar surges, try eating a fiber-rich food(like cabbage or carrots)before consuming carbohydrates or meat; this helps keep your blood sugar stable while you eat. One of my favorite vegetables is Chinese cabbage.

I have already explained muscle pain, which occurs when we do not chew our food properly, and abdominal bloating does not exit through the anus. During sleep at night, it enters the muscles, even the legs, and causes severe inflammation and pain. The treatment is this: we must endure the pain and be patient until it gradually resolves. There is a very meaningful expression that says: When the mind is not in its place (the mind means the brain), the body is in agony.

Kidney pain is one of the hidden and excruciating pains that is caused by a lack of water in the body and excessive salt consumption. When the kidneys are damaged, kidney pain spreads to the back and most patients think that they have back pain. One day, I saw an acquaintance complaining of back pain. I told him that this is not back pain, but kidney pain. He said: No, it is back pain and I was at the doctor and I am going to have an X-ray of my back. In short, after I told him that the cause of his kidney pain was

excessive salt consumption, after some reflection, he agreed and said: "Yes, that's right, I eat a lot of salt."

To treat kidney disease or pain, one must consume water, salt, and protein in appropriate amounts—neither less nor more than necessary. Excessive water intake leads to calcium loss and fluid retention in the kidneys, whereas insufficient intake increases the risk of kidney stones. Similarly, excessive protein consumption (especially from red meat) damages the kidneys and causes frequent urination.

I need to point out some very important points about fasting. No one should fast under any circumstances, because fasting(depriving the body of essential nutrients) is self-harm and self-defeating. From birth to death, it is essential to saturate the human intestines, which means that every person must have at least four meals a day, otherwise their immune system will be weakened and they will suffer from complications. Those who want to lose weight should reduce the amount of each meal, which is two hundred grams, and those who want to have a bulky and muscular body can increase the number of meals, which is four times a day.

From the perspective of religious scholars, fasting during Ramadan is to sympathize with the poor or the hungry. Therefore, if you wish to experience hunger firsthand, you should reduce the amount of food you consume (which is usually two hundred grams). For example, eat eighty grams at each meal. When a person eats eighty grams of food at each meal, he does not get sick, but he loses weight and experiences terrible hunger. Of course, doing this requires courage and competence, because eating eighty grams of food and leaving the table is much more difficult than eating more than half a kilo and fasting. When people eat more than necessary in one meal (for example, fasting people who eat more than 400 grams), their entire body system collapses. This means that eating too

much causes abdominal swelling, an enlarged head, and strange complications in the body.
Note that if you take painkillers to treat pain, you will never be able to identify it.
Given that it is almost impossible to provide and inject the water and food needed by the human body in today's world, other creatures (those who put everything in their mouths, such as alcohol, smoke, etc.) will never aspire to be human. Because humans never put (eat) anything that their body does not need into their mouths. As you know, humans between the ages of one and two consider everything, even feces, to be edible and put it in their mouths, but after puberty, they only find and eat what their body needs. Because being human is hard, when you eat (each human meal is 200 grams) and you have to leave the table before you are full, you experience one percent of the hardships of being human.
In today's society, those who are highly meticulous—or even fastidious—regarding the preparation and consumption of their food are often accused of "gluttony." Yet, the proper preparation and consumption of food is the most essential task a human being must undertake. Food is the fundamental substance of human existence; just as fuel is the primary element enabling a vehicle to move, food is the essential element for the continuation of human life. If the necessary care is not exercised in how we approach food—or if this substance becomes scarce or spoiled—sustaining a truly human life will become impossible.
We, the so-called humans, who, despite having supernatural brains, live under the laws of nature just like birds and animals and have absolutely nothing for our future, should know that all these loves, acid attacks (which occur in separation from love), suicides and the like, are the work of the heart and have nothing to do with the supernatural part of the human brain. The word "heart" refers to

the natural and limited intelligence that all living beings use for their own satiety, satisfaction and survival.
All living beings (who live under the laws of nature), including animals, birds and humans, have their own love and affection and attract each other by singing, charming, etc. That is, after being saturated, they satisfy themselves (waste time in pleasure). We, modern people who are unable to use the supernatural part of our brain, inevitably take the lives of animals and birds as a model to kill time and try to find and attract our life partner through make-up, poetry reading, singing, dancing and playing games (sports, cinema, etc.).
A being with a supernatural brain never falls in love (madly with someone or something) because he has no time to waste. That is, all this love and infatuation and the like are just for the sake of the time left after saturation. Because people today live in the era of abundance and fertility of the earth, they do not know how to waste the time left after saturation. It can be said with certainty that the biggest problem facing human society is spending time in idleness and the cause of this big problem is the lack of purpose in human life.
The bastards encourage brain child people to drink alcohol by establishing bars, taverns, nightclubs and hiring dancers, singers, etc. Explanation of the phrase "brain child people" Only one and two year old children put unnecessary things in their mouths and anyone who puts alcohol in their mouths is not a brain child but a completely brainless person because a child rejects alcohol after tasting it, while a brainless person becomes addicted to it.

I should point out that my writings about the criteria for drinking water, eating food, treating pain, etc. are not arguments or proofs, but rather experiences I have gained throughout my life. Just read

them and reflect on them, and that's it, because what I say is just experience, not science.
I often choose the street and among people for my daily walk, and sometimes when I am among people and see everything in complete safety, I ask myself: "Am I not walking on the planet?" Well, if this carpet (earth's orbit) on which we roll catches fire, we will all become extinct like trees and animals. So, where are the people with supernatural brains?!

People today live in two completely different worlds and have multiple worlds in their minds. The first world is a galactic world made up of particles and atoms that constitute the birth, life, and residence of beings.
The second world is a world of illusion, devoid of particles and atoms. The world of illusion consists of letters and words that determine the fate of current humans and other creatures on planet Earth. Parallel (multiple) worlds are also on the periphery, which, if they exist, are of the atomic world type, and if they do not exist externally, they are part of the world of illusion.
Today, if you ask about parallel universes, you will receive many articles and news, but if you ask how did man come to Earth? You have no valuable answer, you will surely hear the answer that God created the world and man about six thousand years ago. A God who created the planet Earth and its night and day before the formation of the stars, especially the Sun. A God who doesn't even understand the position of the Moon and combines its rotation around the Earth with the galactic motion of the Sun over two hundred million years.
We, who have not yet acquired any knowledge of the formation of our single universe, propose multiple universes. Parallel or multiple universes, that is, all galaxies and placing them in a balloon (place) and calling it a universe. Now, if we put several balloons together, they are called parallel universes. Modern man has no knowledge of space (the abode of galaxies). Therefore, gathering galaxies in one place is not possible, because the distance between some of them is millions of light years. If we consider all galaxies as a universe, its spatial scope will be so vast that it is impossible to imagine it. With the help of today's science, perhaps everything can be imagined, explained and even identified, but the space of existence (the darkness of the universe) is neither knowable nor conceivable. Sometimes I think that the universe is expanding like a balloon, then I ask myself: Where does this balloon expand? Because everything needs space to expand, otherwise it won't

expand.
There are many spaces in our world (the Milky Way galaxy). For example, planet Earth has spaces that are made up of gases and water. There is also no empty space or vacuum in the entire galaxy. A brief explanation of the empty space "vacuum" If we imagine that we are an ocean fish, we can fly (swim) hundreds of kilometers in the empty space of the ocean, while the ocean does not have even a millimeter of empty space, because the space of the ocean is dense water. Similarly, the space in which we live is made up of dense gases and does not have empty space like the oceans. In addition, all spaces are colorless like water and creatures in space are not able to observe their space. Water is heavier than the gases that make up most of our breathing space. Therefore, water is attracted to the center of the Earth by gravity and the gases are placed in the space above the water. If we leveled the mountains with earth and filled the depths of the oceans with iron ore, the waters would rise a few meters and cover the surface of the Earth, and this rocky planet would appear as a blue star in the solar system.
When an accident occurs on an oil tanker and oil spills into the sea, it contaminates part of the water space and the aquatic animals in that part become sick or die. The space in which we live is very similar to the water space (of course, the density of the earth's waters is about eighty percent higher than its gases), the only difference is that instead of water, gas flows in it. Therefore, if a lot of coal is burned to heat a cold environment, the breathing space becomes polluted and the people in that area suffer from fatal diseases. According to the aforementioned category, man cannot do what he wants in his habitat, because man is a supernatural and creative being, that is, unlike other creatures who live under the laws of nature, man is able to violate the laws of nature. For example, cows are more prone to flatulence and pollute the air by releasing methane gas. However, cows are not able to disrupt the order of nature, but it can be said that humans are omnipotent in disrupting the order of nature. For example, when a person sits behind the wheel (motorized devices), more than six million cows

emit harmful gases into the environment and pollute the air. With the current lifestyle, we will soon have to climb at least three kilometers above the surface of the earth to get a breath of fresh air, because the vast majority of people have chosen the illusory paradise of books as their safe future and without any concern (regardless of the future) pollute and destroy the only space that humans have for breathing and survival.

Our habitat is vast, but not infinite. For example, the space of water, if the number of aquatic animals doubles, their habitat expands, meaning that seawater penetrates into the upper space, but the mass of water does not change. We can say: the amount of water on Earth does not increase or decrease. Of course, assuming that no accident occurs and the Earth continues on its current path. Therefore, if the abundance of aquatic creatures increases too much, the water expands and enters the land, but the abundance of aquatic animals limits the habitat to such an extent that there is no space left for them to breathe. Because the amount of water does not increase with the increase in aquatic creatures. Similarly, the space in which we humans breathe and live is very vast compared to its creatures, but it is not limitless. Therefore, if the number of people on Earth increases exponentially for a hundred thousand years, all humans will experience shortness of breath due to the limitation of space. Certainly, in the entire universe, only humans are capable of disrupting the existing system. For example, instead of creating a safe place to survive, people choose the promised paradise of the Stone Age God as a safe future, then they increase the population with a relaxed imagination. After the surface of the earth had no place to build a dwelling, they create floating houses and cities and place them in space. And finally, humans who have supernatural and creative brains increase the population irregularly and without planning and by spreading pollution in space, they disrupt the natural cycle of the world and everyone disappears like ants and butterflies. Since humans are creative beings, it is not difficult for them to build floating cities in space. Just like us current people who create numerous entertainments so that we can comfortably end decades of life on earth, because

we believe that after death in another world (paradise) a carefree and eternal life awaits us.
All the spaces within galaxies are composed of atoms, but the outer space of galaxies must be different. There is no light (stars) in the outer space of galaxies, and in a space without light there is certainly no life and no time. In today's world, the most extensive space is the space where galaxies are located, which is called energy or dark matter. The blackness of the universe cannot be matter, because matter is made up of atoms and has life, while outside galaxies (the blackness of the universe)there is no life. Who knows, maybe the blackness of the universe is antimatter (something that dissolves everything in itself), because when a galaxy collapses, its absence is marked by a gradual decrease. The outer space of galaxies is the burial place of silent beings, and it has no time, like a grave that has space but no time, because in the grave there is nothing (life) that needs time. When the black hole at the center of a galaxy, which prevents stars from colliding, compresses to zero, star systems collide, the galaxy collapses, and all its creatures turn into radiation. Then, outer space gradually eats them up and buries them within itself.
Modern man brings images of galaxies to Earth from a distance of thirty billion light years and correctly announces the time of the birth of the Sun. However, he worships a God who is not even familiar with the name of the galaxy. Certain individuals in today's society — who distance themselves from theism and explicitly declare that they do not believe in God or the prophets—should be aware that the majority of people in the global community determine humanity's prevailing mindset and ideology in any given era. Therefore, we, who live in the era of the God of Books, all believe in God and the prophets without exception, because the brains of the majority(more than seven billion people) are surrounded by the promised paradise of books. If our generation does not become extinct, we will have no fame in the future, because our ultimate hope is a paradise whose creator (God) was created by primitive humans. The people who created God and the paradise

of books did not have armed eyes and did not even understand the movement of the earth.
Since the advent of technology, we have discovered many secrets, but none of the discoveries have helped to shape a secure future for humanity, because our future is what is narrated in the books of religions.
Today's man, who finds galaxies tens of billions of light years away, has no regard for his future. Anyone who understands the galaxy knows very well that the end of the earth is in the flames of the sun and complete destruction, and everything that is promised in the books of religions, including the resurrection, heaven, etc., will happen on earth. However, those who choose the names of galaxies are completely alien to the future. Therefore, human knowledge and exploration are merely to facilitate a few decades of life on earth, not to create a secure future. As usual, science and knowledge should eradicate the ignorance of society, that is, a god who has no knowledge of the structure of the world (the god of the books) should not be worshiped by the masses. Unfortunately, in today's societies, science has been marginalized, as the majority of people choose (inherit, of course) the paradise of the God of books as a secure future for themselves.
Everything that exists is made up of particles and atoms. For example, the galactic universe is made up of atoms, but there are things that have neither particles nor atoms, such as the world of illusion, all of whose creatures are letters. Today, most of the discussions about God are about whether he exists or not. I can say that yes, he does, what he is made of and where he lives. The God of the books, unlike the existence, is made up of letters. This God is at the center of the world of illusion, and his job is to hunt the brain cells of believers.
In the galactic universe, three atoms, 2 hydrogen and 1 oxygen, combine to form a substance that stabilizes our survival, and in the world of illusion, three letters (G, O and D) are connected to create a creature (God) that is the mainstay of nonsense and deception.
There are many creatures in the world of illusion, one of which

is the jinn. It should be noted that each person sees the jinn based on their beliefs. For example, some see the jinn with a small head and very long arms, others with a giant body and the head of a cow, and some see it just like a human but with the claws or hooves of an animal. The jinn enter the galactic world from the world of illusion and harass people. For this reason, people who believe in the God of Books form associations to fight the jinn. For example, the Union of Exorcists with 250 priests (exorcists) conduct exorcisms in more than thirty countries around the world on the orders of Pope Francis, the then-leader of the Catholic Church. Exorcists know very well where the jinn are hiding. For example, an exorcist (a mullah on the pulpit) addressed the audience: When drinking water, say three Bismillah, because water has three jinns, two hydrojen and one oxyjen.

Can an exorcist subdue a jinn? To answer the question, I must tell the story of the jinn's morgue.

A very old morgue, known as the house of the jinn, was so scary that no one dared to enter it in the dark of night. One day, some young boys were talking about the morgue, one of them said: I will bet that I can enter the morgue in the dark of night and stay there for ten minutes. They made a bet that the young hero would go to the morgue at night and stab a large knife on the coffin in which the dead body was and leave after ten minutes. Night came and the young hero, unaware of the power of the jinn, took the knife and entered the morgue. When he reached the coffin, he said loudly: I am not afraid of anything, then he jumped up and stabbed the knife hard into the coffin and tried to get away from the coffin, but he could not because the jinns had grabbed him from behind. The hero looked behind him in horror and saw that the long hands of the jinns had come out of the wall and were not letting him move, his whole being was filled with fear. He tried to escape when suddenly the jinn laughed loudly and with the laughter of the jinn, the hero of the morgue was terrified and fell. (When fear takes hold of a person, he clearly sees what he is afraid of, just as the hero of the morgue was afraid of the jinn and saw the jinn. If instead of the jinn, a wolf had been in his mind,

he would definitely have seen a wolf).
The hero's friends, who were waiting outside, became worried after a few minutes and went to see what had happened. As soon as they entered the morgue, they saw the hero's lifeless body kneeling next to the coffin. Then they noticed that the corner of the hero's coat had been sewn to the coffin with a knife. When the hero was about to stick the knife into the coffin, the corner of his coat fell on the coffin and he stuck the knife firmly to the corner of his coat that had fallen on the coffin. Since he could not get away from the coffin, he imagined that he was trapped by the jinn. So, the jinn are invincible against God-fearing humans, because they are born in the world of illusion and are made up of letters, not like the creatures of the galactic world who are made up of particles and atoms and die with a bang (loud sound) or seeing imaginary ghosts!
When a person enters the cycle of ignorance, he does things that are completely unjustifiable. For example, in a dream journey to the past, I saw a person sacrificing his son to an idol. I told him: This idol is made by man, why are you sacrificing your son to an artificial god? He got angry and said: I must kill you first. I said: I want to help, why do you have to kill me? He replied: You have disrespected my God and you must be killed. Today, the same old style of sacrificing a human being to an artificial god continues, only the idols have become a god (prophets) and the phrase of sacrifice has changed to giving one's life in the way of God.
Respect for the beliefs of others has been and is a tradition in society, meaning that the actions of people who practice their religious rituals and practices should not be criticized or opposed. Consequently, what should be done with a man who kills his son because of his ridiculous beliefs? If we respect his beliefs and actions according to the customs and traditions of society, we will become extinct, because he trusts in an idol as a savior (God) and sacrifices his son, who is the future of humanity. And if we intervene, we insult his beliefs and start a destructive war. Note that there is no difference between sacrificing a child and praying

for heaven (a secure future) because both cases put humanity on the brink of extinction.
Today, when the majority of people, trusting in the God of the Books, choose a baseless paradise for the future and are trying to impose their evil intentions on the minority by threatening to use force, what should be done? Inevitably, everyone must mediate and enlighten to the best of their ability. Since the brain is locked in a cage of obsolete (inherited) beliefs, enlightenment can enter the cage of the brain like a spark and create a crack. Unlike other living beings, humans have two types of brains. The first is the natural and limited intelligence that all living beings make a living with. The second is the infinite, supernatural and creative one that is limited to humans, but unfortunately most of today's supernatural brains are silent (i.e. ineffective) and need a spark to light up. Therefore, without enlightenment, no spark enters the brain to activate it.
A religious missionary told me in a warning tone: Leave this mortal world and think about the hereafter, read the Quran, perform your religious duties and ask God to grant you paradise in that world. I asked him: Which of the beings in the universe provides us with breathing space and security? He replied: God. He, who does not have the slightest knowledge of the origin of life, assuming that the Milky Way galaxy arose from planet Earth, tries to promote and establish his faith (the God of the Books) as the only way to save humanity in society. Respect for the beliefs of others is a tradition in today's society and must be observed. Therefore, if a person propagates an innovation (deception) as God and spreads it in society, should we not confront his deception? If we respect his belief today, tomorrow we must accept his trick as God and worship him, otherwise we will be killed for the crime of atheism. Therefore, we should not pass indifferently by synagogues, churches, mosques, etc., because people in society are drawn into them and emerge ignorant and plunderers.
The God of books is more unreliable than the idols of man-made hands, because he has neither knowledge of the structure of the world nor an external existence, while idols do exist. Since man

is lazy and cannot bear the hardships of building the future, he creates a god, and this imaginary god dominates everything and grants him eternal paradise. Fortunately, the characters who created the God of books for us knew absolutely nothing about the structure of the world. Therefore, our God is earthly because he limits the entire universe to planet Earth. No one can criticize a God who describes a galactic world. If galaxies were mentioned in religious books, I could write this book about the creator of books.
Since I mentioned the Earth God earlier, it should be noted that the Earth God must at least be aware of the location and age of the Earth, while the God of Books does not even understand the Earth's orbital motion, let alone its age.
People who believe in the existence of the God of the books are alien to the future due to the blockage of the brain flow(transcendental part) and do not accept planning and trying to create a secure future in any way. Because God (the one who combines the orbit of the moon around the earth with the galactic orbit of the sun) has buried their brain in the cage of the promised paradise. Just like living beings who are forced to live under the laws of nature and do not have the common sense to think about the future. Note that the brain of living beings who live in an algebraic way focuses only on saturation, not on the future or anything else, that is, all their thoughts, efforts, goals and world are saturation for survival because their brains are limited like the robots we build.
To achieve goals and live a carefree life, humans do not need God or prophet, but rather they need robots. Instead of inventing all these imaginary things like God, heaven, etc., we should create robots that can do all the hard work without suffering. Humans are inherently pleasure-seeking and do not have a desire for hard and tiring work, and this is their physical tendency (like other living beings, i.e. without a supernatural brain) and it does not matter, the point is that humans must activate their unique brain. The proverb of the brain is "the brain is absent, the body is in torment." Humans have subjugated all the creatures on earth by using only one percent of their brain capacity. Therefore, humans are able to create hardworking robots by using twenty percent of their

brain capacity. What I mean by the word robot is a steel machine with a human-like body and brain that does heavy and tiring work for us, not a toy.

Since humans are the most intelligent creatures in the world, they should not lift a finger. Therefore, manual labor should be left to robots. Humans, the only creative creatures in the world, should conquer galaxies, not thrash around on this planet like donkeys to make a living like us. If robots are created to perfection, all problems, including classless societies, will be solved and humans will reach the peak of their greatness. When robots produce robots that are better than themselves, humans will have achieved their goal of creating robots.

At present, a pleasant future does not await man, because the majority of people dream of the promised paradise, and the minority tries to create a society without social classes. Paradise is a pure lie, and in the current world, a society without social classes cannot be created, because the minority is unable to advance its goals against the majority. Despite the creation of a society without social classes, no change has been made in the future of man, because in this (classless) society, only the problem of human livelihood (bread) is solved. Animals also have the same rule of life (classless) that they all become extinct with the collapse of the earth. Therefore, today's humans who accept the promised paradise as a safe future and only try to entertain themselves, like creatures who live without will and under the laws of nature, are accompanied by the death of the earth. While man is a (rightful) creature who creates his ideal environment and determines his own destiny.

To escape extinction, we must leave the solar system and settle in a suitable place in the galaxy (the Milky Way),while emigrating from the solar system requires the speed of light. Whenever the topic of traveling at the speed of light is raised, it is often said that the human body does not have the strength to withstand the speed of light. It is true that no one can travel at the speed of light today, but when man reaches the goal of creating robots, anything is possible, including human travel at the speed of light, because

the first trips are made by robots. Consider that the speed of light is not enough to reach the outermost points of the universe, because just one galaxy(the Milky Way)is so vast that it would take thousands of light years to visit all its points. As you know, the current universe consists of trillions of galaxies that are millions of light years apart.

It is worth noting that the first step for humanity towards creating a secure future is a society without social classes. With today's system of life, where most minds and eyes are focused on the promised paradise and people are looking for their own entertainment, when the earth spends its last moments, we will reach a society without social classes. Because the creation of a classless society depends on the insight and awareness of the people. Therefore, with the current trend of life, a classless society will be realized when man, this intelligent and independent being, is on the verge of extinction, along with creatures that live under the laws of nature!

Elderly people are those who live long (over ninety years) and who are free to have a livelihood (i.e. they do not have to work to earn a living and are free to choose to rest or work).
The elderly constitute a segment of society that spends the final years of their lives in comfort.
In today's modern world, there are special places for elderly care, where the elderly live peacefully together. Today, a well-off elderly person is accommodated in a nursing home with a room where breakfast, snacks, lunch and dinner are served.

A look at a day in the life of Mr. Maher (elderly)

Because Mr. Maher goes to bed early, he wakes up early in the morning and sleeps about six hours every night. He often opens his eyes near morning and, while lying on the bed, looks at the clock that shows four in the morning. He lies down and waits until seven in the morning and after getting up, goes to the bathroom and takes a shower and goes to the dining hall for breakfast at eight. After eating, he returns to his room and rests for an hour. After that, he goes to the hall to read the newspaper and spends an hour with the magazine.
It is ten in the morning, Maher leaves the hall and walks around the open space of the residence for about half an hour. Then he goes to his room to rest and this time he spends more time in the room and after two hours he goes to the dining hall to have lunch. After eating lunch he goes back to his room and rests for an hour. At two in the afternoon he goes to the living room to watch TV and after an hour he gets tired of watching TV and returns to his room. After half an hour, he gets tired of being in the room and returns to the hall hoping to find someone to talk to, but after half an hour of wandering around the hall, he finds no companion and takes his evening meal (sandwich) from the kitchen counter and returns to his room.
It is four in the afternoon and the dinner table opens at seven. After eating a sandwich, he decides to go to the living room, but it occurs to him that he has left there just a few minutes ago. Therefore, he

thinks on the bed for a few minutes and then goes to the living room. In the living room, a number of elderly people are gathered together and are watching television. He sits next to one of his acquaintances and asks what the next TV programs are to start a conversation to vent his inner thoughts. When he receives an answer, he happily leans back in his chair and stares at the television. After watching in silence for half an hour, he gets bored and returns to his room. It is around five in the afternoon, he walks from one corner of the room to another for a moment, then sits down on a chair and spends a few minutes in solitude. At this time of day, almost all the residents are present in the hall. Maher also enters the hall, spends an hour there, and returns to his room.

At the end of the day, at 6:00 PM, an hour before dinner, Mr. Maher spends these long sixty minutes in his room and goes to the dining room for dinner. After dinner, he goes to the living room and rests there. After half an hour, he takes his daily pills with a glass of water and drinks a cup of tea while watching TV. When he can no longer keep his eyes open, he goes to his room and sleeps on the bed like any other day. And thus ends one of our hero's long days.

The above story narrates a day in the life of an elderly person (retired) and there are people who repeat this long day more than five thousand times. The repetition of the said day depends on the length of human life and there are people who live more than a hundred years. Of course, the main character of the above story (the elderly person) is one of the prosperous people of the society, otherwise no information about the last aspects of his life would be available.

When a human child is born, he is cared for from birth and his education begins at the age of four or five. These stages (from kindergarten, primary school, etc.) sometimes last up to twenty years. In addition to education, a person gains experience throughout his life, and just when he has learned his lessons, gained experiences, and is ready to reap, he is physically in a situation where hearing and vision are reduced to a minimum and memory is impaired. In any case, the beings who call themselves "transcendent" attain

the status and dignity of a character in our old man's story (Mr. Maher).

Why should beings who have accumulated vast knowledge and experience, for example, people who can put multiple galaxies in one picture and propose parallel universes, experience a worthless life at the end of their lives like Mr. Maher, the hero of our story? The answer is that there is no unity and companionship in human societies today. When unity and companionship are established, humans are ready to travel to other planets in this system, and if they return with a full hand of planetary travel, they can also travel to star systems. Because by using the facilities available on planets, it is possible to increase the speed and in the future travel to other star systems at the speed of light. I must repeat, when we say that man moves at the speed of light, it seems ridiculous, because the maximum speed of the current manned spacecraft is about ten thousand kilometers per hour, but the speed of the unmanned spacecraft (Parker solar probe) is more than 600,000 kilometers per hour. Remember that about two centuries ago our speed did not exceed fifty kilometers per hour and the speed of messaging was about fifty kilometers per hour using fast horses. While the current speed of messaging is more than two hundred thousand kilometers per second. For example, the Cassini spacecraft sent to Saturn's moon Titan sent a message to Earth from a distance of one billion kilometers in less than an hour. The speed of sending a message at any given time is the speed of the day and two centuries ago it was sent by a horse at a speed of fifty kilometers per hour. Now after two centuries, the speed of sending a message has increased from fifty kilometers per hour to two hundred thousand kilometers per second. Therefore, achieving the speed of light is not impossible!

Since I have chosen the pseudonym Naji, I must say that in the words of many Iranians, Naji means savior (Naji is an unknown word and anyone can interpret it as they wish). I thought the same until I read a text in the book of the late Ahmad Kasravi that says: There are writers and they write Monji (saviour) as Naji.

I am not a Monji (savior) but a Naji (which means saved) and I found freedom from the cycle of ignorance and prejudice without any savior, I was not even my own savior, I simply survived by chance.

I and many other young Iranians joined an organization (sect) to free ourselves and the country from the yoke of the leeching mullahs, but under the organization's foolish leadership, almost all of its members and supporters were crushed like ants under the boots of the regime's mercenaries. Of course, the Saved One(me) was one of the lucky ants who got stuck between the crack in the heel of the boot and was saved. At that time, I was so immersed in ignorance that I could not even bear to hear a word against Islam, let alone doubt the word of God. If someone had said that the text of the Quran was the thoughts of an earthly observer, my soul would have left my body. Like most Iranians, I had no knowledge of the nature of Islam and from my adolescence until the fall of the Shah's regime, I was prejudiced against the beliefs of my ancestors. And after the fall of the Shah's regime, I was caught between reactionary Islam and so-called true Islam.

The current anti-regime groups that claim to support the Iranian people, they don't give a damn about the people and only use the Iranian people to overthrow the system and gain power. In today's world, anyone or group that is at the top of a country's power, as

a treasurer, sits on the money (food) and drinks the blood of the people until the last moment they are in power. Therefore, all groups, whether religious, left, right, etc., are only looking to seize the first power in the country so that they can sit on the money. And this desire for power justifies the means for them, meaning they resort to any means to achieve the goal (power).

Groups do not care about the lives and property of people (members and supporters) and even put their members in death traps to achieve their goals. For example, with prior notice, they organize armed demonstrations and force members and supporters to confront the entire system with a rusty pistol. In the Iranian theocracy, anyone who speaks out against the regime is tortured and executed. Now imagine an organization that moves from the political phase to the military phase (terror) and informs the regime that it wants to hold armed demonstrations. Well, the regime is always looking for such an opportunity to eradicate everyone in the organization. Desperate people have fallen into the trap of an organization that organizes such demonstrations to attract the attention of major world powers, and the mindless regime announces that all participants in the demonstrations will be shot at the moment of arrest. As a result, the poor people of Iran are crushed like ants under the feet of the autocratic leaders of the groups and the brainless regime. Ignorance in society means the incompetence and tyranny of the leaders of that society who try to spread ignorance, because ignorance in society consolidates their rule.

Same old, same old until ignorance is removed from society and people use the transcendental part of the brain. Among the rulers of Iran, only Reza Shah (known as Sardar Sepah and Reza Khan) tried to remove ignorance from society and awaken people from their slumber. Reza Shah, a people-friendly personality who had not even seen the best schools, was able to reach the peaks of power

in the country by using his brain from being a soldier. Reza Shah is the wisest modern leader of Iran because he brought security and discipline to a country where chaos and banditry reigned and the people were immersed in ignorance. Reza Shah removed people (mullahs) who deceived the people from society and restored women's rights to Iran, but when his son Mohammad Reza succeeded him, he accepted the seductive mullahs with respect and honor as mujtahids. Mohammad Reza Shah built more than fifty thousand mosques, Hussainiyahs, etc., and with this foolish act, he dealt the greatest blow to his father Reza Shah and the people of Iran, because he placed parasitic and greedy mullahs first in his own heart and then in the hearts of the people under his rule.

Iran, under the leadership of Reza Shah, moved on the path of pride and insight, and writers such as Ahmad Kasravi, under the shadow of Reza Shah's strong leadership, engaged in enlightenment and tried to eliminate ignorance from society. But with the coming to power of Mohammad Reza Shah, the pen of every enlightener broke, his voice was choked in his throat, and in addition, the deceitful mullahs were called teachers and marja'i taqlid. Reza Shah, who had almost eradicated ignorance in society with his continuous efforts, was forced to hand over the helm of the ship (country) to his son, unaware that his son was a deceived person, a supporter of Islam and an imitator of cunning mullahs. With the coronation of Mohammad Reza Shah, the social and political space of the country was opened to the mullahs. After that, the treacherous mullahs under the shadow of the Islamist Shah tore out the throats of every enlightener. For example, the Iranian writer, scholar, and compassionate person (Ahmad Kasravi), who was enlightening under the shadow of Reza Shah and trying to eliminate ignorance from society, had the dagger of the savage mullahs pierce his chest. And since the new king was a supporter of Islam,

he invited the murderer of the late Ahmad Kasravi (the mullah of the Safavid Nawab) to the court and entertained the criminal who still had the blood of Iranian writers dripping from his hands (Mujtaba Mirlohi was arrested in the attempt on Ahmad Kasravi, but became free and so powerful that he sent his mercenaries to kill Kasravi).

Given that Reza Shah was a shrewd man and a mastermind, why did his son, Mohammad Reza, turn out to be such a fool? My experience suggests that the mother is the one who transmits intelligence to the son, while the father plays no role in this regard. For this very reason, Iran regressed under the rule of the son of an Islamist mother (Reza Shah's wife).

Mohammad Reza Shah's wife (Farah Diba), who is a Mujir-al-Islam like her husband and wore a chador in Imamzades during her reign, gave birth to a son (Prince Reza Pahlavi) who is trying to save Islam because he believes that the mullahs' rule in Iran has endangered Islam.

My experience has no scientific basis and my statements about the child's brain are just personal opinions. Someone who has a smart mother can be a mastermind. Of course, the mother must give birth in perfect health in order to be able to breastfeed the child for three years. Because the development of the child's brain requires at least two and a half years of breast milk and if he feeds on animal milk, he cannot be a mastermind (in the literal sense). Therefore, Reza Shah's mother must have been a wise woman. I do not know her, but based on my experience, I can call her a wise mother. In today's world, Nikola Tesla, who has the highest percentage of brain use, had a priest father but a wise mother. As you know, all the thoughts of priests and so-called clergymen and... are located in the lower body, not above the head, because they are all fascinated by heaven, that is, the stomach and sexual

desire.
Education and equipment can help a person with behavior and communication, but they cannot transform a petrified brain into a mastermind. For example, Farah Diba graduated from the best schools, but no change occurred in her brain and, like her husband, she was born a Shia Muslim and has never (yet) abandoned her traditional and inherited beliefs. If Farah could use her brain (at least examine her inherited beliefs), she might have given birth to a child like Reza Shah.
When the father of a family imitates the corrupt swindlers (the mullahs), the entire family ends up on the brink of disaster. The father of a family may not be able to oblige his wife and children to accompany him, but the king of a country is like the captain of a ship who holds the helm and all citizens necessarily follow him. Because in the previous regime, the vast majority of the people lived in ignorance and prejudice, mosques became their refuge. The mosque is a school where all its teachers are seducers, a place where people are deceived and immersed in ignorance and prejudice. The ineffective leadership of the previous king sent crowds of people to mosques and caught the negligent citizens in the trap of corrupt swindlers and spongers. After that, over time, the cunning schoolmasters of the mosques, who saw themselves in the hearts of the people, decided to come out of the hearts of the ignorant people and ride on their shoulders. We must never forget that the former regime is the cause of all the instability and despair of the people of the country, because Mohammad Reza Shah, with his unwise leadership, trapped the people of his country in the trap of the seductive mullahs.
To build a great building, we must have a proper and precise foundation, otherwise it will collapse. For example, the previous Shah built a great and magnificent building (Iran), but he built

it with Salavat, that is, instead of reinforced concrete, he used dung for the foundation, and as expected, it collapsed in 1979. Establishing a secure future is like building a great building, the infrastructure of which must be intelligently managed from the foundation to the last brick. Unfortunately, a thoughtful and steadfast father who wanted to create a bright future for Iran and eradicate the 1,400-year-old demagoguery was forced to leave the family (Iran), and his son Mohammad Reza, who was an imitator of the deceitful mullahs, came to power. This prince (Mohammad Reza) was so mentally unstable that in his last moments he said: I will die as a Shiite Muslim. He was a weak-willed man with a higher education, installed by foreign powers—following the deposition of Reza Shah—to lead a major nation like Iran; his incompetence and frivolity ignited a popular revolution against dependency, corruption, drugs, bars, and brothels. After the fall of the Islamist Shah, the cunning, cheap-rate mullahs—who used their tawdry sermons to justify Mohammad Reza's regime (which sold out the nation's honor)—subjugated the people and are now devouring the country's resources like root-eating worms. People who wear crowns, turbans, and the like, and live off the labor of others—like root-eating worms—do nothing but eat. When worms enter a wall, they eat it and reproduce until the moment the wall collapses and the worms disappear.

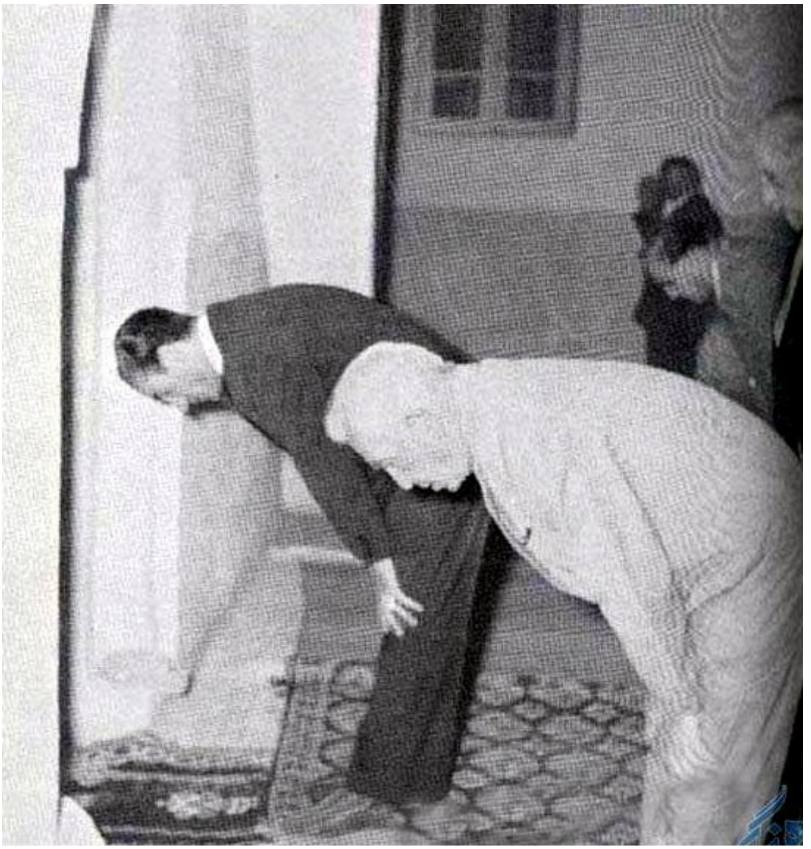
I hope the Iranian people will not be forced to rise up against the brutal regime of the sheikh, because these mercenary guards are willing to kill all the people in exchange for rations. The number of mullahs in Iran is estimated to be around three million, and these bloodthirsty leeches, who came to power through the stupidity of the previous Shah, have about ten million bodyguards, and since they do not even dare to go to the bathroom without a guard, they increasing the number of their personal guards at every moment.

These bloodthirsty mullahs, who have seized the wealth (treasury of the country),hire thugs as their bodyguards, and when a bodyguard (thug) dies, they create a myth about him to encourage everyone to become the mullahs' personal guards.
Those who trample on human conscience and intelligence and protect parasitic mullahs must abandon these freeloading clerics and join the people, otherwise they will all perish with their masters.
The traitorous mullahs have a history of fourteen hundred years. Fourteen centuries ago, when Iran was invaded, most of the mullahs, especially the white turbaned ones, were and are those who trampled on their humanity, zeal, and honor and collaborated with the invaders. People who, as bodyguards in exchange for rations, obey the orders of the lowly mullahs should know that they are all the most unzealous and hated Iranians who, like the white turbaned mullahs, welcome the invaders with open arms.
About fourteen centuries ago, the mighty country of Iran was conquered by those who had neither the intelligence nor the courage to do so. It should be noted that the duality and hostility of the Iranian people had reached their peak before the bandit invasion. As mentioned earlier, all sects, groups, and political organizations try to seize power and control the country's treasury, and those in power severely suppress hostile groups in order to maintain their sovereignty. The king who ruled Iran fourteen centuries ago buried his opponents up to his neck in a playground and ordered his agents to play polo (with horses) on the opponents' heads. As a result, groups that were being pursued by government officials were forced to flee the country.
At that time, a group fled from Iran, and upon entering the desert, the agents refused to stop them, because the desert is no refuge for fugitives. Those who fled Iran at that time were the leaders and members of a group, some of whom were the masterminds

of the country. They chose the desert to meet the bandits and after encountering them, they showed them some money (jewelry) they had with them and said that these are pieces of great treasure, if you cooperate with us, we will make you rich and powerful. The bandits accepted with enthusiasm and asked: What should we do? The Iranians said: With this money, prepare a table of delicious food and invite the elders to dinner. The table was set, and the elders of the city came to dinner. The hosts (the escaped Iranians) whispered the revelation of God those present every evening during dinner, and under favorable circumstances they announced the new religion and prophecy of Mr. X to everyone. One night, in the presence of the guests, the Prophet recited a verse that says: The sun does not reach the moon and ... One of the audience said: If this statement of yours (verse 40 of Yas) is a revelation, I knew it as everyone knows, whoever looks at the sky will see that the sun does not reach the moon and ...! The hosts immediately cut his throat so that he gradually died. After this incident, those who criticized the verses of the Prophet were killed in a horrific manner, with the aim that no one would dare to criticize. Since after fourteen hundred years no one dares to criticize, the evil beasts have achieved their goal by silencing the voices of the wise.

Iranians have spread this table of submission (Islam) with their own hands and are always paying the price for it. Today, after fourteen hundred years, the blood of the Iranian people is still the food of the table-keepers. At the beginning of the cannibal attack on Iran, the blood of the people was transferred to the tables of submission by force of the sword, but in present-day Iran, people voluntarily donate their blood to the table.

The image below illustrates the fact that even the King of Iran voluntarily offers himself and his country to the aggressors.



"The King of Iran also bows down to the invaders"

The consequence of hereditary leadership is that a foolish crown prince like Mohammad Reza succeeds a thoughtful and steadfast father like Reza Shah and thwarts all his father's efforts to remove the seducers from society.

As long as the people are in ignorance, someone must take charge of the affairs of the masses like a leader (a dictatorship like a shepherd), otherwise chaos and banditry will arise. Reza Shah was a steadfast and noble leader (the father of the Iranian people), and Mohammad Reza Shah was a dictator (a traitor to Iran) and a terrible torturer.

Today, if you discuss culture and civilization or similar matters with Iranians, their claims will extinguish the sun. Yet they will even sacrifice their lives to fill the table of the aggressors.

My father was so religious and fascinated by the promised paradise that I became a child laborer from the age of eight. In my teenage years, when I saw my father, he would read the Quran at home or prostrate in mosques and had no problem with the future of his children because he had complete trust in the God of religious books. He never thought that creating the future required planning and effort. A deceived person whose entire thoughts were surrounded by the promised paradise. Just like a being who lives without willpower and is alien to planning for the future. We had an old carpet at home that they said could be valuable. One day I saw my father on the street with a carpet on his shoulder, and he was walking quickly. Then I saw a relative who had a small carpentry workshop near our house, with my mother running after my father. I followed them and saw Mr. Carpenter take the carpet from my father and walk towards the house. I asked my mother, "What happened?" She replied, "Your father wanted to give the carpet to the imam of the mosque."

I was eight years old when my father took me to work at a shop belonging to one of his acquaintances. It was a place where custom -made shoes were made and two people worked. The shop was on a street where heavy vehicles like trucks and trailers used to travel, and because the shop didn't have plumbing, I had to cross that dangerous street several times a day (about four times, with an empty bowl and four times with a full bowl) to get a bowl of water from a water pressure plant (Feshari) on the other side of the street. If it was a large container like a thermos, I could get water once, but the workers wanted fresh water and several times a day they would say: Come on, kid, go get a bowl of water.

One day I was crossing the street with a bowl full of water when I had an accident. My left leg broke and the bowl fell from my hand onto the sidewalk in front of the shop. I was lying on the side of the street, it was crowded, and several people, including the shop owner, were talking to the attacker. A few minutes later, they said, "The child's father has arrived." Someone said to my father: "What are you doing? Your son may be paralyzed." My father said, "God is great." My father, for the sake of his God and the love of the promised paradise, consented before he saw his injured son and learned about his condition, and the attacker immediately left the scene. While my father could not afford to take me to the hospital, his stupidity and religious fanaticism imposed a year of pain and humiliation on me.

I was ten or eleven years old when I secretly bought a notebook and pen and enrolled in a night class (Akabar). After a few days of class, my father found out and said: You don't want to go to school and destroyed my books. I was twelve or thirteen years old when I stood up to my father with bullying. After that, I enrolled in a night school and learned to read and write. When the father of the family is immersed in the swamp of ignorance, he tries to drag the whole family into the swamp. Like my father, who did his best to raise me (like my brother, who was four years older but not a bully like me, took him by force to the Qom seminary and put a turban on his head) in ignorance and neglect, or like the treacherous Shah (Mohammad Reza) who dragged the whole of Iran into the swamp of ignorance.

I remember that at the height of the reign of Mohammad Reza Pahlavi, the mourning processions such as the chest-beating and chain-beating processions were so long that they started from Moniriyeh Square and reached the front of Tehran Bazaar near the Arak Mosque. The length of these mourning processions was

a foolish and ignorant gesture that the stupidity and darkness of the leader (the traitorous Shah) brought to Iranian society.
Mohammad Reza's reign was the last terrible regime on earth because he did not place any restrictions on his mercenaries in SAVAK, meaning that SAVAK's hands were completely open to kidnapping, the worst torture in safe houses, and even killing people.
Since the previous Shah had surrendered all the resources and people of his country to his master in exchange for the throne, his only goal in life was to eliminate the thinking minds and keep the rest of society in complete ignorance (of course, by order of his master, who had made him the gendarme of the region due to his absolute servitude). During the reign of Mohammad Reza Shah, the country was governed much like that of its master; brothels, gambling dens, taverns, and similar establishments operated freely under an oligarchic system. Certain individuals — by opening cabarets and hiring singers, dancers, and the like—would lure the general public into a vortex of intoxication and debauchery, leading people to drink without regard for the contents of their wallets and often leaving them unable to settle their bills. Others exerted influence by running billiard halls equipped with jackpot machines, bingo games etc. When I was young, my hangout was on Pahlavi Street, between Shah's intersection and Pahlavi intersection. In fact, we were known as the kids of Azar Alley(above Amir Akram). The hangout gang and I often numbered ten to twenty people, and in the early fifties we would gather most of the time in Pahlavi Park and smoke hashish. Imagine ten to twenty young people sitting in public, by the street's watercourse or on park benches, smoking hashish without any warning from government agents. One of the kids was obsessed and always had a few pages of newspaper in his hand to put under his hips and sit on, he was not a newspaper

reader at all. One night, describing an incident that had happened to him a few hours earlier, he said: This evening when I entered the park alone, two people wearing ties stopped me and asked, are you a student? I was scared and answered: No, I am a production worker of X. We kids from the hangout smoked hashish in and in front of the park for years and were never questioned by the police or private agents. I remember a Parisian girl (a tourist) who smoked hashish with us. One day, as I was entering the park from Shahreza Street, I saw the same Parisian girl sitting on the side of the street, begging with a note in front of her knee. I asked in surprise: What is this, why don't you go back to Paris? She said: This is heaven and I will stay here as long as I can. At that time, I didn't understand what she was saying and I said to myself: We live in heaven, but when I came to Europe, I understood why a Parisian girl considers Tehran to be heaven. Because in Europe, no one can smoke hashish in public.

To light a spark in the Parisian girl's brain, I must tell the story "Tourist."

A young man died unmarried and was sent to heaven. As soon as he got to heaven, he saw everyone praying and begging. He looked around and saw a place with the words “Hell’s Embassy” written on it. After a few days, he gets fed up with the dirty faces of the people and the mosque-like atmosphere in heaven, so he went to Hell’s Embassy and filled out an application for a week -long trip to hell.

The hell agent stamps the week-long tour on the application form, and he goes to hell. When he enters hell, he sees Elvis Presley singing, the wind lifting Marilyn Monroe's skirt, Mohammad Ali Fardin and Reza Beik Imanverdi teaching young people how to pickpocket, in short, everyone in hell is having fun. He says to himself, "Wow, this is a wonderful place, go apply, maybe you

can get permanent residency here." He goes back to the embassy and applies for permanent residency in hell.
The guardian of Hell asks: "Are you sure you want to live in Hell forever?" He replies: "Yes, of course, with all due pleasure," and at that moment his request for permanent residence was granted and he rushed to Hell.
When he reached the entrance, he saw everyone was hung from the ceiling and being tortured. He asked the guard: "Where else is this?" I'm looking for hell, the guard said: "This is hell." The young man, who was disappointed, said with concern: "No, this is not hell, I was in hell just half an hour ago and everything was happy. I don't want to be here." The guard of hell took the unfortunate young man's hand and, while pulling him inside, said: "Half an hour ago you were a tourist, but now you are a permanent resident, come in."!
I hope that after fifty-three years, the Parisian tourist girl is still alive and sees the true paradise. If she had applied for permanent residency and obtained Iranian citizenship, she would have been stoned to death after the revolution, and if there had been no revolution, she might have been willing to sleep with male thugs in the Tehran brothel to make a living.
To perpetuate societal ignorance, Mohammad Reza's monarchy established countless mosques across Iran while simultaneously creating dens of moral corruption—such as Tehran's *Shahr-e Now* (the Qal'eh)—to satisfy the sexual urges of male thugs and hooligans. Any man who condones the existence of brothels in his country must also accept the possibility that his own mother, sister, wife, or daughter could turn to prostitution; for a brothel requires prostitutes, and one cannot insist that the women of one's own family remain chaste while the women of others engage in prostitution. Thus, wherever a brothel exists, all the men are pimps

and all the women are prostitutes. Hadde the Shah been told that his own wife, Farah, was going to *Shahr-e Now* for an hour to work as a sex worker, his sense of honor would have been outraged; yet, he viewed the prostitution of other men's wives not merely as unproblematic, but as a mark of civilization.

If a woman prostitutes herself for a living, there will not be a single man on planet Earth, and those who call themselves men are, without exception, ponces. The fall of human conscience is as infinite as the space of his brain. When a man falls and degenerates, he takes sexual satisfaction from another's wife and kills his own wife for sleeping with others. I used to have a friend whose mother was a sex worker in New City in Tehran. He and his brother (the only children in the family) decided to kill their mother with a knife, but every time they went to New City to kill, maternal love prevented the murder. Until their uncle came and tore out his sister's heart with a knife, and with his sister's blood dripping from his hands, he went and satisfied himself with someone else's sister (a prostitute in New City).

Under the reign of Mohammad Reza, the future of Iran and the Iranian people was marked by boundless decline and ruin; for, at the behest of his masters, he introduced alcohol into the lives of the populace. A person who consumes alcohol is neither truly human nor an animal, as alcohol disables the very part of the brain that distinguishes humans from other living creatures, transforming the individual into a bizarre entity. Since humans are inherently creative beings, alcohol consumption causes them to cast aside their humanity and commit heinous acts—such as rape, murder, and even incest—only to justify their negligence and inhumane conduct, upon regaining sobriety, with the excuse: "I was just drunk." Had the Shah's alcohol-promoting regime not fallen, the majority of Iranians would have been addicts (to hashish, heroin, opium,

or alcohol), pickpockets, lawbreakers, brawlers, thugs, or utterly ignorant.

The traitorous Shah had created such a palpitation that if anyone had a critical thought, they would have hidden their heartbeat in their chest. The Shah's SAVAK had created an atmosphere in Iran where a father thought his son was a SAVAK member and the son saw his father as an accomplice of SAVAK. I remember in the early 1970s when I was thinking about politics (class divide), my whole being was filled with the apprehension that SAVAK had created. The dishonest Shah had given his mercenaries in SAVAK a free hand, so that SAVAK had safe houses (torture chambers) in all parts of the country, kidnapped suspects, often killed them under unspeakable torture, and disappeared their bodies. Because in exchange for the throne, he had placed all the resources and people of his country at the disposal of his master, America. Therefore, anyone who spoke even a word about his dishonesty and devotion to America would be kidnapped and annihilated by SAVAK.

Numerous people disappeared in the 1960s and 1970s and no trace of them was found. All of them were certainly disappeared by SAVAK, because the mercenaries of SAVAK had such a wide berth that they could arrest, torture, and annihilate anyone.

SAVAK did not mistreat suspects who prayed, but it labeled those who did not pray as communists (the Shah only called his opponents communists on the orders of his master, America) and killed them all under indescribable torture. Anyone who stood up to oppression and tyranny in the early 1970s will understand the term SAVAK's suffocation. The atmosphere of terror created by the Shah's SAVAK frightened the people of many countries, so much so that no one even believed that SAVAK and the Shah's terrifying regime would fall. When I talk to people in Europe about the Shah's reign, I hear them say how happy they were when the world's most feared

dictator fell.
Under this "Sheikh" regime (the previous one was the regime of the Shah and the Sheikh), I was tortured to the brink of death on numerous occasions, yet the anxiety and dread that SAVAK instilled in me were never repeated. In the early winter of 1981, when I was arrested and interrogated and tortured for weeks in Evin, I had no fear, because I had experienced the most terrifying atmosphere on earth that SAVAK had created. I remember when SAVAK arrested a suspect, no one dared to talk about the arrest, let alone the suspect's condition or whereabouts. In the winter of 1981, when I was arrested for the fourth time, no one knew where I was. Since there was a possibility that the suspect would die during interrogations in Evin Prison, the suspect's whereabouts were not announced to relatives until the interrogation was over. Therefore, every morning in the cold winter, my mother would bring several mothers of missing children to the door of Evin Detention Center to convince the prison authorities to announce the whereabouts of their children.
The mercenaries of the evil clerics beat my devoted mother and tried to drive her away from Evin by splashing water in the cold of winter, but the kindest mother on the planet did not leave her child under torture and slammed the door of Evin prison until an appointment was made with her son. During the interrogations, I had heard them say, "He's mother is persistent."
I did not even imagine that I would get out of the interrogation alive, because if I did not give in to the torture, the other people in the case would not be able to bear it. In other words, not being exposed in Evin (of course, an operational case) is impossible. So whoever was not exposed in Evin must have been as lucky as I was. When they called my name and I met my mother, I believed that the interrogation was over. In fact, my mother saved me, because if she had not knocked on the prison door every day, the interrogators

would not have rushed to complete my case and I might not have survived the interrogation.
Considering the above, imagine if the Shah's SAVAK had arrested me, where could my mother go and look for her child? SAVAK had houses that when they took someone inside, no trace of them could be found.
The pain and suffering caused by torture can only be understood by those who have been tortured, and the horror of the Shah's SAVAK atmosphere can only be understood by those who have been there. That is, in the frightening atmosphere of SAVAK, they at least had critical thinking towards the brutal Shah's regime, unlike my friend (with a newspaper in his hand) who had a chance encounter with SAVAK in Pahlavi Park and lost his usual obsession due to fear.
It is said that the former king was kind to dogs. One morning, when I was going to work, I saw the traitor king's municipal officials throwing meat in front of the dogs, then I saw the dogs screaming incessantly after eating the meat. I realized that the officials had thrown the poisoned meat in front of the dogs. I went to work and came back for lunch at one o'clock in the afternoon and saw some of the dogs still howling and whining. More than fifty years have passed since that incident, but the sound of the dogs' incessant howling still haunts my mind.
When the human conscience falls, this creative being is incomparable to anything. If the evil Shah wanted to round up stray dogs by killing them, he could have fired a bullet and killed them without torturing them. But this Iranian king was so cruel, heartless, and unscrupulous that he ordered SAVAK to tear apart thoughtful Iranian youth in safe houses and ordered the municipality to kill dogs with indescribable torture. During the reign of Mohammad Reza, every incident in Iran, such as killing stray dogs, torturing

young geniuses, etc., was carried out by the king's order, because in such a government there is neither a party nor a president who can interfere in the affairs of the country or give orders. Therefore, the order to kill dogs or torture thoughtful and young people in safe houses was a direct order of Mohammad Reza Shah.

I was a simple, handsome, long-haired young man who, like other Iranians, lived under the rule of the corrupt Shah (Mohammad Reza). As far as I can remember, I asked for trouble, even before puberty, did not accept bullying and oppression, and this right-thinking attitude was the main motivation for me to get out of an environment characterized by drugs and addiction. Most of the kids in the Azar Alley hangout became addicted to heroin, and some of them, who were the most handsome kids on earth, died from heroin injections in the toilet of the Champs -Élysées shopping mall.
The picture below shows a period in my life when I was slowly sinking into drugs, but because I was lucky and a little bit smart, I didn't succumb to humiliation.

(Photo date: early 70s, I'm standing on the left)

In fact, I was an ignorant religious person who constantly thought that only Islam could give worldly blessings and happiness in the hereafter to humans. During the time of the brainless Shah, the Safavid Nawab (the murderer of Ahmad Kasravi) was one of my heroes, and I considered the name of Ahmad Kasravi to be an atheist (one who must be killed). Defenders of the Shah's rule should note that if he had not fallen, the murderer of Ahmad

Kasravi would still be a hero to me and most Iranians. Most of those who defend the former Shah today were either SAVAKI or ate at the Shah's table. In the 1970s, some singers were paid twenty thousand tomans for a one-hour program, which ordinary people could buy a house with. Therefore, those who defend the former Shah's rule are only looking for the benefits they had at that time. Just like vultures that scurry around the table of great hunters to eat the leftovers.

A worthless king who surrendered the entire country, the people, and everything to his master in exchange for the throne, and to consolidate his rule, he kept the people in ignorance and prejudice with entertainment such as nightclubs, gambling houses, taverns, brothels, mosques, hussainiyyas, etc.

As mentioned earlier, we were called the kids of Azar Alley. In the Azar Alley area, there were hangouts like Bamdad Confectionery, Andre's Sandwich Shop, Shahab Club, and so on. Shahab Club, which had jackpot machines, bingo, billiards, snooker, and ping pong, had to have a Thug to keep order, otherwise everything would fall apart, because it was a high-income place. An old man in a police uniform always sat at the counter, but no one considered him a human being. All he did was occasionally warn young men carrying large knives.

The last thug of Shahab Club was a man named Bahram Shahbazi (known as Bahram Runaway). He was not big and intimidating like most thugs, a man of about thirty, thin, and 170 cm tall, but lightning fast. One day I was at the club, and the person sitting behind the cashier pointed out to Bahram a burly man who was leaving the club and said: "He messed up the bingo last night." The burly man went out the door and Bahram ran after him. I ran up right behind Bahram, it didn't even take two seconds, but I saw him hit the burly man with a machete and tear his right arm

twenty centimeters (his machete was like a small cleaver, and it didn't have a tip) so that the flesh of his arm fell below the elbow. The bruised man's face was as white as chalk. Bahram said something to the bruised man that I couldn't quite make out. I only heard the phrase "Next time," I think he said to him, "Next time I will hit you in the face," and he ran away. The next day, Mr. Bahram Runaway, came to work like every day, as if nothing had happened last night, even though he had paralyzed someone's hand. After that incident, the injured man never came to Shahab Club because the law was and is in the hands of bullies.

The thugs of Tehran had their own world because the Shah's wretched agents avoided dealing with them. Only in one case was a thug killed by the police, and that was Mohammad Gambo, a thug from a brothel in southern Tehran, who slashed a police officer in the face with a machete and was shot dead by the police. Moreover, the above incident took place in 1979 "After death, the doctor". On Shah Street, opposite the Iran Department Store, there was a club called Khalij, which was run by Hossein Single Hand (the thug). The thugs were competing for each other's place. One day, while I was standing on Azar Alley, I saw a car brake in front of the Shahab Club and Hossein Farzin (one of the thugs from East Tehran) and three others, each holding a large sheet of newspaper, got out of the car. When the wind blew the newspapers away, I saw them holding swords and hurrying down to the club. I followed them and saw four men surrounding Bahram and hitting him on the head with the width of their swords, then I saw one of them strike Bahram with the sharp edge of his sword and split the skull. When Bahram was covered in blood and on his knees, the attackers went towards the exit. At this moment, I was still standing on the steps watching, I quickly left to avoid coming face to face with them. I stood outside and saw four men with bloody swords

(in broad daylight) get into the car and beat a hasty retreat. If the agents of the unfortunate Shah were present around the incident, they would have been looking for a mouse hole to hide in. The next morning I went to the club to find out about Bahram's condition and when I entered I saw Bahram standing at his workplace with his head completely bandaged and smiling. If Mr. Bahram Run Away, had not shown up for work, Hossein Farzin would have put one of his Novice thugs in his place and taken a ransom.
During the time of the traitorous Shah, every Tom, Dick and Harry would carry a machete, but only those who had some connections would enter the blackmail ring. Just like Bahram Runaway, who would hit and run away, and a well-heeled man would fill his back. That is, after buying the unfortunate Shah's judge, the wealthy person would hit anyone he wanted, with a single gesture, and Bahram's machete would hit him.
One day, a fight broke out in one of the houses of the Qala (brothel) in Tehran, and the Hoodlum of the house injured several people with a machete. Some people shouted to the injured that the country has laws, go to the police station. The injured went to the police and came with two officers and took the Hoodlum with them. A few minutes later, the owner of the house, named Pari Bolandeh, came, and the house staff told She: They came from the police station and took the Hoodlum with them. Pari Bolandeh said: Bring my veil. She put on her veil and left. In less than ten minutes, she brought the Hoodlum with her. During the time of the helpless Shah, the country had laws, but its laws were always under Pari Bolandeh's large veil and did not penetrate outside Pari Bolandeh's veil.
Because I was once a religious ignoramus and a very fanatic and then I fell into the trap of a sect (organization), I have never been and am not passive. A human being is a growing being and always

stumbles and deviates throughout his life and after understanding the stumbles (experience) he transforms and pursues his goals with more solid steps. For example, I used to be a Hezbollah member and then joined the ranks of the anti-Hezbollah. Now, with the knowledge and experiences I have gained (of course, my brain movement began after the fall of Mohammad Reza's reign), I focus all my thoughts and abilities on finding a way to create a secure future. Therefore, I am proud to have played an effective role in overthrowing the traitorous Shah. I sacrificed my life for the overthrow of the traitorous Shah. On September 8, 1978 and other days, waves of bullets from the traitorous Shah's Gewehr 3 rifle hit my body, I attacked the Jay barracks and took the weapon of the most feared dictator in the world. If Shah Majir al-Islam had not fallen, I would still be that religious ignoramus who thought he had to read the Quran and pray to be saved. Just like Mohammad Reza Shah, whose thoughts were surrounded by superstitions, as he stated in an interview: Religious beliefs are the heart and spiritual part of society, and without them, society will decline. Considering the destruction of brains and the spread of ignorance in the previous regime, one of the greatest honors of my life is to overthrow Mohammad Reza's monarchy!

In the winter of 1981, I was arrested for the last time and transferred to Evin detention center. After being tortured and seeing the injuries of prisoners and the bodies of those killed by torture, a spark shook my brain. One must be careful not to misuse the description of torture methods, because authoritarians may adopt torture methods. Regardless of the misuse, I hope it is seen as a warning.

There are many methods of torture in Evin Prison, but the most horrific is that a detainee is tied to a torture bed and beaten on the soles of his feet with a whip made of electric cable. After numerous blows with the cable, when blood appears on the soles of his feet,

they rub the soles of his feet with special torture boards so that the blood spreads and does not break in the next blows, so that they can destroy the defendant's self-confidence with repeated blows and extract a confession (it should be noted that this type of torture was invented by the Shah's SAVAK butchers and with it, they inflicted the most painful deaths on Iranian geniuses in safe houses). When the soles of the defendant's feet are torn as a result of the blows, he is transferred to the hospital for treatment. As far as I know, the doctors at Evin Hospital are selected from among the prisoners. The most prominent doctors, some of whom were the Shah's personal physicians, patched up torn or blistered feet (pear-sized blisters hung from some of the soles of the feet). The torturers were in a hurry to whip the newly stitched feet as soon as possible, so that the final blow would fulfill the ayatollahs' definitive Islamic edicts. In the torture chambers, the bodies of those who had died from torture were placed in black bags and dragged into the corridor to leave the hall. Several times when I was taken for interrogation and kept in the corridor all day, I saw from under my blindfold the bags containing the bodies being taken out of the interrogation rooms and dragged across the corridor floor to the exit.

Some people who were being interrogated and some prisoners in Evin attempted suicide. Any prisoner who attempted suicide in Evin Prison, if unsuccessful, had to endure several horrible and unimaginable deaths under torture. Because the interrogators believed that every person who committed suicide had a secret issue and did not want this issue to be in the hands of the interrogator. Therefore, suicide attempts and failure, non-stop physical torture. That is, tearing off the legs with a whip, sewing them up and whipping them again even after death. During the time I was under interrogation, several suicide attempts were made, but most of

them were unsuccessful. Someone severed a vein in his wrist with a tin can (can lid), and the officers took his half-dead body to the infirmary and after treatment to the horror room (torture chamber). The toilets in the interrogation corridor had a thin metal hose instead of a water jug for washing. Some of the accused committed suicide by inserting a hose into their anus and injecting water into their bodies, but most survived and were transferred to the death chamber. Imagine an environment where desperate people commit suicide and are arrested on charges of concealment and sentenced to a thousand lashes on the soles of their feet. (I personally heard Asadollah Lajavardi say: Hassan Behrouzi received only sixty lashes on the soles of his feet and died). That is, with sixty lashes on the soles of feet, there is a possibility of the person being beaten to death. Now imagine yourself captured and the moment your interrogator announces to you that he has received a sentence of a thousand lashes for the soles of your feet.

As far as I know, people under interrogation attempted suicide after being tortured to escape the pain. Because the torturers would beat the accused's legs to the point of tearing them, and sometimes they would pause for a few days so that the accused could feel the crushing pain and confess before being beaten the next time they were tied to the torture bed. Only those who are tied to the torture bed understand the pain and the words of torture.

When they took me to the torture chamber, I was blindfolded and could only see in front of my feet. As soon as I entered, on the right side of the room, I saw several whips, some of them hung on a small board like a school blackboard (but in the color of wood) and some were placed on the edge of the board. The whips were made of wire and electrical cables, some colorful and thin and woven, and some black and thick like crowbars, and all had

handles. At that moment, I knew where I was being taken, but I didn't really care. By studying my experiences, I came to the conclusion that my brain turns off and on to save my body. For example, when they took me (the example below is one of my brain blackouts) to the torture chamber, I didn't think at all about what was going to happen to me the next moment. I remember that sounds like chanting, screaming, and shouting filled my mind. I think the torture chamber was divided into several rooms, because I could hear different, heartbreaking sounds coming from all around. I must admit that at that moment, the screams of the people being tortured, especially the girls, calmed me down, because I saw them in much more difficult conditions than me, and this prevented me from being overcome by fear.

When they were about to tie my hands and feet to the torture bed, I only thought about the screams and moans that came from all around me and nothing else. They tied my hands up and my feet down so that my stomach was on the bed and the soles of my feet were raised and they started whipping me. At the beginning of the beatings, I felt such pain in my legs that I screamed with all my might. Immediately, they put things like pieces of plastic and cloth in my mouth and someone pressed on my back so that I could not turn the bed over and the crushing blows with the cable continued. The cable that hit my legs was thick because after each blow, a very intense pain entered the upper part of my leg. After many blows (I don't know the number), the excruciating pain in the soles of my feet reached my brain and was so severe that my body could not bear it and I closed my eyes to the world. That is, all that beating, suffering, etc. ended. After dying under torture and returning (Brain lighting), I did not know where I was, I only heard a faint sound and after a few moments I saw that I was sitting at the end of the bed with the right side of my head leaning against

the wall. The echo of the voice I had heard grew louder and said: Walk, walk, I got up to walk, I fell because the soles of my feet were on fire. While walking, the burning sensation in my feet was so intense that I thought they had inserted needles into the soles of my feet and were forcing me to walk. During this torture, which ended with my death, I was never questioned during the torture. The torturers stuffed my mouth with pieces of cloth and plastic and only hit the soles of my feet. I had previously seen a person being tortured, moaning and groaning and saying, "Don't hit me, I'll tell you everything, just don't hit me," and the torturers were talking to him.

After returning from death under torture, I remembered that my hands and feet were tied to the bed and my legs were being whipped, but no matter how hard I tried, I couldn't remember anything else. I don't know how long I was in the grip of death, what they did to me, and why they untied my hands and feet from the torture bed. As mentioned before, my brain turns off and on to save my body. I have died many times in my life. When a person dies, there is absolutely nothing. Just like a light bulb, when it is off, it does not emit any light. When the brain is off, if the body has been tortured or mutilated, the moment it turns on, it does not perceive the pain or mutilation of the body at all. Once, when I was crushed under the blows of the mercenaries' rifle butts, my brain turned off and when it turned on after a while, I only felt my upper body and thought that my arms and legs had been cut off, because it took me so long to find my legs.

I have experienced many wonders in my life and the above example (coming out of the death chamber) is one of them. In Evin Prison, if a detainee falls into a coma during torture, they do not stop the torture but rather bring him to consciousness or whip him in a coma, but they brought me out of the death chamber. More than

forty years later, I still do not believe that I came out of there. Because the torturers of Evin sometimes whip the lifeless body of the accused. A detainee who died during torture was still being whipped. The hired interrogator who was whipping said: I have received a sentence of a thousand blows with a cable for him and I must give him a thousand blows. Before the accused died under the fatal blows of the cable, he screamed and said: Don't beat me, I will tell you everything, just don't beat me, but the torturer kept beating him and saying: " We told you that if you confess, we will give you a discount, but you made up lies." The torturers, believing that he had nothing new to say (there were no gaps in his chart), continued to whip him. After a while, no sound came out of him, and the torturers continued to whip his lifeless body to destroy the confidence of the other defendants (accomplices). The first written question from the Evin Prison investigator to the defendant is that each defendant must draw a chart and indicate his position and that of each of his accomplices on that chart.

As far as I know, the horrific tortures in Evin began in October 1981, and in the early years, more than ten people died every day under indescribable torture. In Evin Prison alone, if I remember correctly, two days a week, on Mondays and Wednesdays, two hundred prisoners (one hundred on one night), all under the age of thirty, were shot. At that time, I was imprisoned in Ward Two, Room Five Up. On shooting nights, the sound of a hundred G3 rifles, each firing three bursts of bullets into the chests of young boys and girls, shook our room. After the volley of rifles, they fired a final shot. I remember that before firing the final shot, a hired executioner would shout, “Count it,” and start firing the final shot. The executioner knew that his voice would reach the prisoners, which is why he shouted the word “Count it.” One night

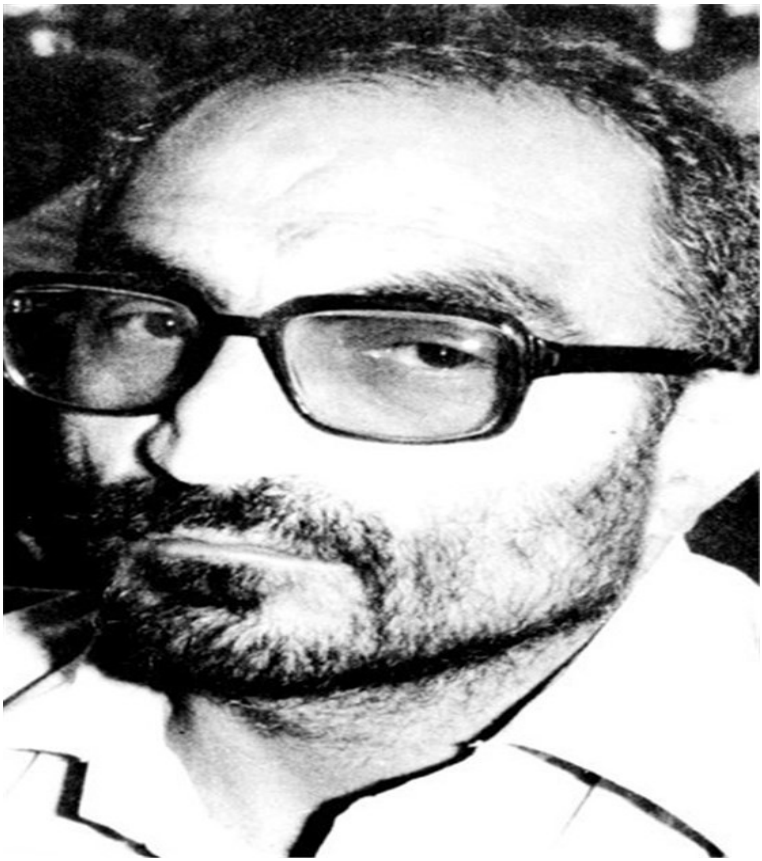
when they were firing the bullets, I unconsciously counted to sixty. On the nights of the shooting, everyone (the roommates) would lower their heads and quietly sob. I remember the newspapers publishing the names of the young people who had been shot in Evin. Yet, there was no protest anywhere on the planet.

After coming out of the torture chamber, I was transferred to a temporary room. I was interrogated for about two weeks and spent my free time (without interrogation) in the mosque room (also called the room of the tortured "Taaziris") and the corridor. For about five years that I was in Evin, I always moved with the present moment and never thought about the future moments, and this moment-by-moment life and luck saved me from the terrible prison of the bloodthirsty mullahs. Today, after more than forty years, when those moments come alive in my memory, the fear of interrogation and torture has taken over my entire being. At the beginning of my arrest, I thought about God most of the time and the feeling of being close to God was so calming that I was not afraid of anything. One day, while I was sitting in the mosque room, I saw a person next to me who had been tortured so terribly that his legs were swollen and very thick from infection. In Evin Prison, when the accused was tied to the torture bed, they would whip the soles of their feet until they were torn, and after the feet were sewn together in the infirmary, the newly stitched feet would be tied back to the torture bed. Thus, the most horrific deaths were inflicted on the youth of Iran in Evin Prison.

I would say that the doctors at Evin Prison were among the best in the world. For example, the Shah's private doctors cared for the tortured prisoners and worked tirelessly to restore their mutilated legs. In turn, the torturers waited in the interrogation room for the doctors to finish dressing them so they could whip the repaired legs again. To test yourself, imagine that you are the torturer at

Evin Prison, then whip the newly stitched legs of the accused. If you can do this in your mind, you will come to the conclusion that the creature holding the whip is not a human but a hyena (Asadollah Lajevardi) disguised as a human. Hyenas are the most ruthless and terrifying animals in the wild. For example, lions kill their prey first and then start eating, but when hyenas reach their prey (while the prey is alive), they start eating from the back of the legs until they reach the head. Because they are hyenas, and there is no obvious point called conscience in the brain of a hyena. If you look at the face of a hyena in a photo frame, you will not realize how ugly and terrifying it is, but when you see a hyena in the desert in front of your eyes and hear the sound of its breathing, you will realize what a vile and terrifying creature it is. Likewise, torturers, if you see the photo of Asadullah Lajavardi, you will not realize how disgusting and terrifying he is, but when you are tied to the torture bed, see his face from under the blindfold, you will realize that there are uglier and more terrifying creatures than hyenas. Of course, hyenas are inherently predatory and cruel, but the torturer is a perceptive, creative and inventive creature that has become a lower creature than hyenas. The first time I saw Lajavardi up close, I was in a mosque room and I was blindfolded. He often came and looked at the people in the room and left like the angel of death.

The image below shows exactly the face I saw from under the blindfold in the mosque room.



(The Grim Face of Humanity)

All the prisoners of Evin in the early 1980s certainly know that hyenas are beautiful and kind creatures compared to Lajevardi. Asadollah Lajevardi, a lowborn man, although he was a prosecutor, would appear in the torture chamber, take a whip in his hand, beat, and say, "Mehdi Bukharaei couldn't bear it under this cable, you want to bear it."

Lajavardi was a humanoid hyena who took cruelty to the extreme. He sent thousands of Iranian boys and girls (his compatriots) to death squads and tore hundreds of young men to pieces under indescribable torture. Death by hanging or firing squad is not a

difficult death, but death under torture is so gruesome and difficult that it cannot be described in any way. If a person is severely tortured, severe pain will lead to death, but if treated, they will survive. As mentioned earlier, Evin doctors would stitch up the mutilated legs of prisoners, and the cruel Lajavardi would stop the torture for a while and after a partial recovery, he would inject them with more torture. If the skilled doctors of the previous regime had not been captured, most of those tortured in Evin would have died from the pain. I remember being in so much pain that I was dying, one of the doctors at Evin Hospital told me, "You're going to get hot now," and then injected something into my arm. My body immediately became so hot that I thought fire was coming out of my mouth, after which all the pain disappeared from my body. When my urine turned bloody, the thought of death filled my mind. I told the person sitting next to me in the mosque room that I was urinating blood. He said, "It's normal, it'll be fine." When I heard him say this, I felt better and said to myself: Evin Prison is a place where urinating blood is normal. I owe my life to the doctor who injected me with morphine, otherwise the constant pain would have drained my soul from my body.

Lajevardi is the most unscrupulous person on earth and no one can compare to him. Lajevardi, the ruthless one, would tell detainees whose files were leaked and completed: Your sentence is death, but if you cooperate and can bring a few of your accomplices here (reveal the hiding places), I will not execute you. Also, if you cooperate more, you will be released. Some detainees believed the evil Lajevardi's promise and cooperated with him honestly. In one case, a person sincerely cooperated with Lajevardi for several years and delivered dozens of people to the jaws of the hyena (Lajevardi), he did not even spare his own family members and dragged everyone to Evin. Finally, Lajevardi kept his promise

(the promise of freedom) and executed him. The reason for the execution was the expiration date. That is, there was no other subject left in his case.

When a gambler sits at a bully's table (gambling table), he goes all the way, that is, after losing his pocket money, he does not give up his loss, but borrows money and continues, and in the end he loses everything he has, such as his house, his car, and even his pants. Those who honestly cooperated with Lajevardi were gamblers who sat at the gambling table of the bully Lajevardi and even lost their last breath. A few of the detainees had read his hand before sitting at Lajevardi's gambling table. There was a case where he promised to cooperate and, in prior coordination with his accomplices, killed several torturers. They themselves were killed in this operation, but they did not gamble with Lajevardi's promises because they knew that they would be executed after the case was closed.

In Evin Prison, when prisoners were taken to be executed, everyone walked in silence to the firing squad. Only one night, for the first time, did I hear a voice that kept shouting,"Lajevardi promised me." Lajevardi, whose brutality is indescribable, executed all the prisoners who cooperated with him honestly. So imagine how he treated those who did not cooperate.

I and other detainees under interrogation spent the most terrifying moments of our lives in the corridors and room called the mosque or Ta'ziris. We were always blindfolded and were not allowed to talk to each other. If anyone spoke, they were immediately taken to the torture room. I looked inside the room from under the blindfold and if I saw a stranger, I asked how he was. For this reason, they dragged me out of the room many times and beat me with fists and kicks. Nevertheless, I told myself that no matter what happened, I had to talk to the person whose legs were severely swollen and

I said to him: I have no hope, what is your wish? It should be noted that the best wish of a young Iranian is to get married (start a family), but the wounded young man replied: Just die, they won't let me die, die to get rid of this pain. Hearing his words, my mind was shaken and tears flowed unconsciously. I immediately doubted everything, such as God, the Prophet, the Quran ... because we (the tortured people) were among the most righteous servants of this God (the God of the Books), we performed our duties, did not drink alcohol, and avoided worldly pleasures. We only smoked a few cigarettes a day, and to avoid smoking a few cigarettes, we told each other that we should not smoke because it contradicts the principles of refinement. At that time, I considered myself a pious and virtuous person, unaware that I was nothing more than a fanatical ignorant person, because without research and knowledge, I had complete faith in God. A God who has no smell, no effect, and no external existence. Just a word (name) consisting of three letters that revolves in the world of illusion.

I remember when I was imprisoned with twenty-nine other people in a closed room (about fifteen square meters, which they called the school), sometimes the door would be opened and the doctors, I don't remember their names (one of the Shah's doctors) would secretly throw a small plastic bag with various vitamin pills into the room and quickly close the door. Most of the prisoners helped each other as much as they could. I had a broken bone in my palm (fracture or dislocation), the doctor at Evin Prison examined and treated my hand in less than ten minutes, so that after a few days it completely recovered. After a while, I found out that my treating doctor was the Minister of Health of the former regime. We should be grateful for the compassion and hard work of the doctors at Evin Prison, especially Mr. Sheikhol-eslam Zadeh. Sometimes the world becomes very small, I never imagined that one day the

Shah's personal physician (Sheikh-ol-Islam-Zadeh) would take the trouble to treat my hand.

I must admit that after several arrests, interrogations, etc., I was able to escape the clutches of the mullahs' regime's torturers and expose some of the savagery of the regime's mercenaries, but no one came out alive from the clutches of the torturers, the SAVAK safe houses, to expose the crimes of the corrupt Shah's mercenaries. A brief description of suffocation. People, those who are subordinate to the regime and are busy with their work, do not understand suffocation, but those who stand up to tyrannical dictators, suffocation always squeezes their throats. The suffocation that Mohammad Reza Shah created has never existed and will never exist. I have experienced both the suffocation of the Shah and the Sheikh (the Sheikh of the current regime) and I cannot compare these two suffocations, because the Shah's suffocation was so horrific that there is nothing to compare it to. About fifty years ago, I briefly struggled with the Shah's strangulation, and after the Shah, I have stood up to the Sheik's brutality and bloodthirstiness. I am not exaggerating, the Sheik's strangulation could never squeeze my throat, that is, terrify me, but the strangulation of the Shah's regime squeezed my throat so much that death under torture by the Sheik's regime was nothing compared to it. The point is that the unscrupulous Mohammad Reza Shah established the most terrifying regime on earth. Imagine standing in a taxi queue and four SAVAK agents force you into a private car and take you to the nearest safe house. No trace of all those who were taken to safe houses by the SAVAK agents was found. On the orders of the Shah himself, the SAVAK mercenaries cut to pieces the non-prayer youth of Iran(the geniuses) in the safe houses, stigmatized as communists. I remember when a foreign journalist asked the Shah about torturing and killing his opponents, he replied: "They are all communists and terrorists"

"That means they are not human at all." That's why he gave his mercenaries in SAVAK full authority to torture and dismember Iran's geniuses.

Before a spark was struck in my brain, I had no proper understanding of the structure of existence, and ignorance and disregard for current science had caused the wonders of the universe to have no effect on me. Because at that stage I had God. A God who would never allow the wonders of the universe to enter my brain, but now when I see a star, I think my new home in that star system is ready to be carpeted.

Today's man, who estimates the number of galaxies to be more than two trillion, must be careful that his life is not limited to Earth, because after the destruction of the Earth, life continues in galaxies. In short, the galaxy is the membrane of life. So as long as there is a galaxy, there is life. Since the resurrection (the emergence of the dead from the graves), heaven and hell are on Earth, my previous world (God and creation) was limited to Earth. After cleansing my brain of inherited beliefs, a connection was established between my mind and eyes and I was able to see the wonders of the extraterrestrial world. When I believed in God (books), science and discoveries had no meaning for me, because my God was superior and more wonderful than anything!

In the summer of 1988, one evening when I had just come home from work and it was dusk, the doorbell rang. When I opened the door, I saw Ali Hamedani with a frightened face. He said, "They're coming to get you. They're going to take you across the border. Everything is ready, and they're waiting for you at the end of the alley in their car right now."

(Part 1)

I said, "You rock, I will never forget this dangerous thing you did for me. I had been looking for such an opportunity for a long time to leave the country and leave the fear of being arrested again behind." And without any hesitation, I asked Ali to quickly go to them so I could pack my suitcase and come.

I went inside the house, quickly packed my things, and told my mother that I wanted to go to Shiraz (because I didn't want her to worry about me, I said I was going to Shiraz for work).

I reached the end of the alley with my heavy suitcase and saw Ali standing there talking to two people in the car. The person sitting next to the driver got out, came towards me with a smile, and said as he took the suitcase from my hand, “Greetings, fellow soldier, if we move quickly, we will be on the other side of the border tomorrow around noon.”

I asked Ali, "Are you coming with us?" He said, "No, I'm going home in my own car." Before leaving, he said, "When you arrive, let me know as soon as possible so I can find out how you're doing." He left, and I sat in the back seat and two people sat in the front, and we drove off.

After we left, there was silence for a few minutes, and as soon as we left the outskirts of the city, the person next to the driver started talking and asked, “How were you released?” The tone

of the question reminded me of an interrogation. In response, I said that the sentence was over and I had been released. The driver said, “We heard differently.” Hearing his words, fear gripped me, and the person next to the driver said, “They only release those who have exposed a number of people.” And he asked, “How many people have you exposed?” I couldn’t answer because I was about to explode with anger. At that time, I always had a knife with a safety catch in my hidden trouser pocket, and I took it out of my pocket and coughed loudly several times so that they wouldn’t hear the sound of the knife opening, and I held the knife in my right hand. The driver asked, “Does your throat hurt, why are you coughing?” I replied, “No.” Your words are choking me. I am ... Mehri and ... and the only one who hasn’t been exposed, why are you asking me these questions? The person next to the driver turned to me and said, “I wanted to make sure you hadn’t been exposed.” When I heard his words, I felt relieved, but the relief didn’t last more than a few seconds, because he showed me his identification card, which was from an officer in Evin Prison, and said, "You thought you could escape from us, Asadullah Lajvardi sent us." Upon seeing the Evin officer's card, all the anxiety in the world rushed into my brain and I screamed with all my might and slammed the knife hard into the driver's neck. A voice said, "Hajji, hit him, hit him." I saw the black barrel of the Colt in my right eye and then a terrible sound and the end of everything.

(Part 2)

When I came out of Evin detention center, I couldn't believe that I had been released, because they released one of my roommates and even let him go out of the prison door. When he left, they told him: "You're going too fast, you've been exposed, go back

inside, we wanted you to confess yourself." In short, I was released and started my normal life, but I never had peace, because I was banned from leaving Tehran and had to appear every week (later every two weeks, then every month) at Evin or one of the committees to introduce myself and answer questions. I remember that as the day of introduction approached, I would feel panic and anxiety. When I was in prison, after the interrogations ended and the verdict was issued, I was interrogated very rarely, but after my release, it happened every week.

A few days after my release, my relatives and friends would organize a celebration for my release, and often the celebrations would turn into wailing after the meal was over. Once, when I heard my mother crying from the next room, I went to see what had happened. When I entered the room, I saw my mother crying profusely and others crying with her. I asked my friend what was going on. He said that when you eat chicken bones (chicken was served at most parties), your mother cries and says that because they didn't give my son anything to eat in prison, now he even eats chicken bones. I laughed and said: My compassionate mother is right, because in prison they used to give chicken rice, but there was no chicken and the prisoners called it chicken shadow. Chicken shadow means that when they were cooking rice, a chicken passed by the rice and its shadow fell on the rice. After I told the story of the chicken shadow, my mother and the others left the room with teary eyes but smiles. After that incident, I never ate chicken bones at parties again.

From the first night I slept outside the prison, I had been dreaming of the other side of the border, but since I didn't see a way out, I kept it a secret. I continued with my work and my normal life, and all this time I was looking for a way to leave the country. As I mentioned in the first part, one evening when I had just come

home from work, the doorbell rang. When I opened the door, I saw Ali rushing to greet me and saying, “The organization has sent some people to get you across the border, and now they are waiting for you in their car at the end of the alley.”
I said: Ali, they want your property, your life, your family, your friends, your acquaintances, and even your reputation. As I was mentioning the above, Ali stepped back, and when he was a few meters away from me, I told him to be careful. A week later, when I saw Ali, without saying anything to him, he said, "Mehdi, I was scared that night, a fear that had never penetrated me to this extent, and I still haven't been relieved."
Once again, the organization contacted me. It was Thursday and I was supposed to buy a flight ticket to one of the border cities for the following Wednesday. That same day, I went to the airline ticket office on Amirabad or Jamalzadeh Street and asked the clerk: Do you have a flight ticket to Chah Bahar for Wednesday? After checking, she said: "Yes." She opened the register and asked: "How many people?" As soon as I was about to say one person, my feet moved towards the back exit and the clerk asked several more times, but I just looked at her and left the office without saying a word.
After Ali Hamedani rang our doorbell, thirty-two years passed before someone, I think a former judge or something like that who had left the system, revealed this plan (death trap after the release of political figures from prison). In other words, after thirty -two years, I learned about this plan and realized that they had sent Ali.
Four years ago, when I found out that the people who sent Ali were Evin agents, I often have nightmares at night where two people take me in their car and on the way, they first say: You exposed many people so that they can release you, and after I

explain that I was not exposed, they show me their ID card (Evin special agent). Every time I have this nightmare, the agents treat me in different ways, sometimes digging a pit in the desert and burying me alive, sometimes trying to make me beg, but I have never begged for freedom or relief from the pain of torture, even in the nightmare. The story I told in the first part is one of my ghosts or nightmares.

I didn't even know my soul about this plan, meaning I knew absolutely nothing about this plan, I just wanted to scare Ali with my words so that he wouldn't fall into the organization's trap. Furthermore, when I realized the nature of the organization in late 1981 (in my youth, I chose this organization among groups because the ends did not justify the means. For example, when the royalists offered financial assistance, we would not accept), after that, I no longer had any connection with the organization.

I hope my friend Ali Hamedani is alive and knows that they did not intend to let me cross the border, but rather to bury me alive. These motherfuckers hatched a terrible plan and, after humiliating and torturing many people who had been released from political prisons, killed them and made their bodies disappear in the desert and waters around Tehran.

How difficult and grueling it must be for a mother to spend her days awaiting news of her child from abroad, all the while her beloved one lies buried alive in the deserts on the outskirts of the city. Had I accepted their offer—as in the story from the first part—and gone with them, my mother—who lived for about twenty years after that time (we stayed in touch via video calls)—would have spent every single moment of those twenty years waiting for word from me.

After all these escapes, arrests, torture, deaths, and resurrections, I always say to myself: "What a lucky person you are. Is it possible?"

After my release, I was always looking for a way to leave the country, and even though I was going through the worst conditions (despair), I unconsciously rejected the best offer to leave the country. During my imprisonment, many people could have exposed me, but none of them did. For example, one day I was waiting for a taxi on the street when a private car stopped a few meters ahead, a person got out and came towards me. When he arrived, I recognized him, he was one of the organization's kids. He greeted me and, while shedding tears, held my hand and said: "You died and your name is on the list of martyrs of ... September." About six months passed after this incident and I was arrested and imprisoned.

One night in Evin Husseiniyeh, several repentant(Tawab) people identified a person, and each of them revealed his actions and position. He also spoke, and while looking around, he said: " I know many people here too." When he said the last sentence, his gaze fixed on mine, and he was the same person who had said on the street with tearful eyes: "I died, and my name is on the martyrs' list." At that moment, I said to myself: "Sooner or later, someone will expose you." Many people could expose me, and the most important of them was the one above, and another was someone whose job was to expose. That is, he was hatching a plan to arrest his accomplices, one of his plans was the landlord-tenant plan that he gave to Lajvardi and hundreds of people were arrested with that plan. He who had exposed heaven and earth and could have exposed me too, but he didn't do it. Who knows? Maybe he liked me because most people in the world who come into contact with me like me. One day he approached me and said bluntly, "You have two guns in your file." I walked away from him with a smile and realized that he also had access to the files.

Lucky or unlucky, in 1981, two people were surrounded on Pahlavi "the Mossadegh of that time" Street (at the end of Azar Alley), one

of them was killed and the other, me, survived. If I had been lucky, I would have died there, so that I wouldn't have to go through all this trouble and pain. Maybe I was lucky enough to survive, so that I could document and share with others the painful and near-death experiences of a careful and compassionate human being (If you've no sympathy for human pain, The name of human you cannot retain. Poetry by Saadi Shirazi)!

Envy

Envy is one of the human traits that is considered immoral and ugly today. The word envy may not be praised, but it motivates people to compete and strive to achieve their goals. Today, envy is inseparable from stupidity. For example, in a neighborhood, one of the residents builds a luxurious building, and the spectacular view arouses envy in the neighbors. Some residents of the neighborhood build more luxurious buildings by demolishing their old house. Their action is literally envy, but one of the neighbors, upon seeing the magnificent building, digs a channel(aqueduct)from the basement of his house to the luxurious building and causes dampness and cracks in the walls by pouring water. His action is also considered envy, while his behavior is stupidity, not envy, because envy is wanting and having something, not damaging or destroying it.

"A clear example of how envy activates man" In the 1950s and 1960s, a Soviet spacecraft broke through the Earth's atmosphere and entered the extraterrestrial world. It was immediately envied by the United States, and the United States landed on the moon. If the Soviet Union had responded to America and conquered Mars, modern humans would have the solar system and other stars behind them and would be planning to conquer other galaxies. So, envy would have brought man to the throne, because it has many uses. Man walked on the moon, but he had no scientific or exploration program, it was simply envy that brought him to the moon. If by chance the entire mass of the moon were diamonds, the speed of today's manned spacecraft would reach hundreds of thousands of kilometers. Considering that there are planets with the mass of diamonds in the universe, if we achieve true unity, we could pave the earth with diamonds.

Basically, people only envy attractive and valuable things and never envy vile or disgusting things in each other. For example, if someone has cancer, no one envies their cancer. People today have something that is sublime and valuable only to themselves, while to others it is so base and disgusting that no one envies it, but rather runs away from it. When a person has something that

no one envies, it means that he has something very sinister and terrible, such as leprosy, tuberculosis, or the like. Because anything attractive and lovely must arouse envy in others, otherwise it is evil and disgusting. I carry that evil thing with me like everyone else, but for me it is not sublime, but a source of shame and passivity. If I had been born a hundred years later, perhaps I would not have that evil thing with me.

Today, by combining the word envy with malevolent, evil eye, etc., they emphasize that one should not be envious, while envy is a competitive feeling. Humans are competitive creatures and because they think differently, they compete with each other to advance their goals(explanation of the human brain and the various ways of thinking on page 18).

If I had placed the subject of envy at the beginning of the book, it might have become a mystery, but it is almost in the last category. Therefore, I do not need to explain what modern man has that no one envies, because those who read this book will not have the worthless that no one envies. Because the elimination of the hateful thing becomes inevitable for them!

An extraterrestrial alien asked the donkey: "You who are always crestfallen, why don't you raise your head?" The donkey replied: "Humans, with their ignorant actions, have left us no dignity to raise our heads. Humans raised their heads and after worshipping the sun and the moon, they chose fire as their god. When relative security was achieved in their lives, they carved stones and wood and spent millennia worshipping idols. And then they created this non-existent God about seven thousand years ago and brought out more than one hundred and twenty thousand prophets from his bosom."

To explain the word prophet, I must refer to a quote from Mr. Sigmund Freud: "If someone thinks they are talking to God, they are sick and should see a doctor, but someone who thinks God is talking to them should be hospitalized."

The brain that made such a quote a hundred years ago is a source of honor and respect for all people (may his memory always be cherished).

One hundred and twenty-four thousand insane people who should have been hospitalized were released into the communities to dig their own wells and put humanity at a depth of one hundred and twenty-four thousand meters. We (present-day humans) are at the bottom of the well 124,000 meters deep and with the current course of life (immersing ourselves in the dream of the appearance of the Savior) when the flames of the sun cover the earth, only our ashes will fall out of the well. Therefore, we must get out of our useless dreams as soon as possible to have a chance to find modern and safe homes. Every being with a human brain knows very well that planet Earth will one day fall into the flames of the sun.

The vast majority of people today have full faith and trust in the God of Books, even though none of them have ever done any research to believe in it. A mature person knows that every being must have a sign, otherwise it is nothing more than an illusion. For example, beings such as demons, jinn, and the like have no signs except imagination. As long as I did not know who gave me life and continuation, I was deceived and worshipped the God of Books as the giver of life. After researching and understanding the universe a little, I realized that all the energy in my brain and life is given by the Milky Way Galaxy(which I call Mother Milky Way).

Now that we know to some extent that the origin of everything, including space, light, water, soil and our being, are galaxies, if we move away from the dream and(illusionary) hope of the appearance of a savior, we can even examine how galaxies are formed. It was previously noted that, on his own, a human being becomes prey to termites; yet, through solidarity and unity, he transforms into the absolute power of the world. Today's man, who dreams of the promised paradise of books, does not even have the power to imagine moving at the speed of light, while we do not get anywhere at a speed of three hundred thousand kilometers per second. If we can understand our supernatural brain and use ninety percent of its capacity and power, we can move much faster than the speed of light. Note that humans used only one percent of their supernatural brain to seize all the resources of the earth and dominate the animals. That is, we (some of us are in space) use one percent of our brain. I ask myself: How many times the speed of light can we travel using 100% of our brains? As you probably know, there are several hypotheses today, and one of them is the wormhole, which, if realized, could return humans to the origin of their journey of millions of light years!

Book Name: "The Future" Written by "Naji (M.A.)"

This book is at the level of the last grade of elementary school. This means that teenagers of ten or twelve years old must be completely familiar with the structure of the world, etc. presented in this book, otherwise they will be deceived by seducers and will have no other fate than destruction.

The galaxy cannot be described to people living in ancient times, because there is no galaxy in the ancient world, and Lack of knowledge of the galaxy means that it is impossible to have a proper understanding of the structure of the universe. Modern science, after studying the galaxy, describes the diameter and even the distance between its stars. Therefore, everyone should be familiar with the current knowledge that explains the structure of the universe in order to be able to build a secure future and determine their destiny. Unfortunately, most people on planet Earth do not need to know the structure of the universe or the creation of the future, because they have a God above their heads (minds) who has revealed how the universe is built and the conditions of the future through prophets (books). For this reason, we are humans living in the age of technology, but our brains and thoughts are wandering in the Stone Age. Because we carry with us the beliefs of our ancestors.

We modern humans, just like the people of the Stone Age, have no knowledge of our past or future, and this is due to our lack of comprehensive understanding of the structure of the universe, as we have not yet gained any knowledge about the formation of galaxies.

I am ashamed to say where I was born, because we Earthlings worship a god who doesn't even understand the position of the moon, while a mature human being should have a complete understanding of the structure of existence in his past!

Nowadays, people often talk about freedom, while freedom has nothing to do with humans. Since our life as humans is social, we make rules and live according to them to create balance and equilibrium in society. For example, no one has the right (is not free to do so) to defecate in public, but animals can have intercourse or defecate anywhere and anytime, because they are animals and are free. Therefore, humans can never be free(animals) and instead of freedom, they should seek unity and oneness. We need oneness, not freedom, because freedom is for animals.

People in human societies must achieve human unity in order to be able to set goals and pave the way to achieve them. Otherwise, we are like creatures who live in a forced manner and have life and extinction under the laws of nature (i.e., we dissolve in the environment like animals and objects, while real humans create their own ideal environment).

Human unity signifies the establishment of security in the life of the noblest of beings in the present cosmos.

A few points about human unity: Today, a brothel is established in one corner of the house (earth) and cuckolds invite or force women into prostitution, while in another corner of the house, people are stoned to death for the crime of sleeping together, and this indicates the disconnection and difference between people in human societies!

Mother is the essence of the life cycle of generation and the phenomenon of extraterrestrial brains!

Currently, the life of living beings on Earth (humans, animals, birds, etc.) is based on two principles: first, satiety (filling the stomach) and second, satisfaction (intercourse and wasting time in pleasure). If anyone takes a step other than satiety and satisfaction, man has emerged with a supernatural brain!

Humans can create whatever they wish and attain godhood, or they can create a god and seek a secure future—their own destiny—by obeying and praising this god!

Time means life, life means movement, and movement is the birth of time. So, if we are behind time, time will take us to nowhere and exterminate us. But if we are ahead of time, we will pull the reins of time to reach our ultimate goal (ideal world). Beings who live under the laws of nature are behind time, and those who break the laws of nature are ahead of time!

Life (moving towards goals) requires choices, and choices require deep thought. So, study carefully to make a confident choice!

We roll on our own carpet (solar orbit),and if this carpet becomes old and worn out, which it naturally will, all humans will perish, just like animals that live under the laws of nature!

From the perspective of extraterrestrials, every human being is a role model for all humans on Earth. So be careful with your thoughts, words, actions, and appearance!

The main motivation in my life is the eradication of the generation of seducers(mullahs, priests, kings, sheikhs,etc.) and the elimination of ignorance from society!

It might be an exaggeration to say that I use two percent of my brain capacity, but using one and one percent of my brain capacity (the human part) is my claim!

The fundamental goal of human life is to create an ideal environment (by "environment," I mean a space)!

The path to extinction (the path of today's people who have chosen the promised paradise of religious books for their future) is very long and terrifying!

If you enter a land where all the people are mad, there is only one mad person in that land!

Good speech is a spark that awakens sleeping brains!

Tough experience can be gained through study!

My main target audience is teenagers aged ten to twelve!

In conclusion, I will write a few points regarding alcohol.

In modern human societies, alcohol consumption has secured a firm place at people's tables—much in the same way that the concept of "God" (He who bestows eternal life in paradise) has taken root in the very fabric of society. It should be noted that in any given era, it is the majority that shapes human beliefs and behaviors—regardless of the fact that some individuals may not believe in God or may choose to abstain from consuming alcohol.

The vast majority of regimes governing contemporary societies have—by enacting "inhumane" laws, such as legitimizing alcohol, tobacco, gambling dens, bars, brothels, and the like—cemented the presence of alcohol at people's dining tables. Consequently, as long as alcohol remains present at these tables, there will effectively be no "real" human beings left on earth; for alcohol disables the very part of the human brain that distinguishes man from animals, transforming individuals into strange and highly dangerous creatures.

In today's society, there are individuals who no longer resemble human beings; they have reached a point where they manufacture counterfeit food products—such as rice made from plastic or similar materials—and sell them to the general public. The sole reason for committing such heinous acts is the presence of alcohol on people's dining tables. Alcohol strips a person of the essence of humanity and transforms them into something worse than a hyena. These individuals, interested only in making more money, completely abandon their humanity and resort to the production of drugs, alcohol, counterfeit food products, cigarettes, and the like!

Take care of (humanity) yourself!
